UFO in Baku Again

21/05/2003 Baku Today

Hundreds of Baku residents became the witnesses of the unusual phenomenon - the unidentified flying object buzzed above the city on Monday in the evening. UFO was observed in various parts of capital approximately from 5 pm to 7pm (Baku time). In the cloudless sky the large light stain similar to an extended "drop of milk" has appeared.

The object was not similar to a cloud, aboard the plane or the helicopter, as moved on a complex trajectory, Ekho newspaper report says. At 18:35 drop suddenly started quickly to leave, was not dissolved yet in the sky. The abnormal object has caused interest not only the people of Baku, but also Azerbaijani experts.

Professor Elchin Khalilov, chief of a commission on the abnormal phenomena at presidium of Academy of Sciences, shot the UFO on amateur. Mr. Khalilov has noted that they had already started to study the video.

With similar UFO we face for the first time, he told to reporters. It is already unequivocally clear, that the fixed object is not the plane, helicopter or other flying means. The UFO represents enough, slightly extended form. Thus is abundantly clear, that it is object of a technical origin.

UFO hung at height of 5 kilometers, and then has departed to the Caspian Sea side. "I can not tell exactly how far the UFO was," he said. "All depends on the size of UFO. On our sight it exceeded 10 m. UFO was rather low above ground and it was large enough, with symmetric elements on each side."

"I admit that this object can be any spy, but only theoretically. We have experts in air navigation, space researches, astrophysics, which will involve for the

analysis of this shooting, promised Elchin Khalilov.

Fuad Gasimov, chairman of Cosmic Seismological Department of Azerbaijan National Aero cosmic Agency says, appearance of UFOs in the sky is an alarm signal for people who “destroys ecosystem of planet”.

As Baku Today reported early this year, an UFO appeared on Baku on January 2. Some scientists claim that UFOs were also observed before and warned about natural disaster. Mr. Gasimov stated that UFOs hinder the prediction of earthquakes and researches carried out in this field.

They don't want mankind reveal their secret. But there are some facts stating that UFOs keep in touch with the scientists. Though most approach these unserious, objects keep in touch with selected persons by the means of Morse alphabet or telepathy signals and transmit information related to the future, he told to journalists in January of this year. It seems UFO will become “normal guest” for Baku inhabitants soon.

Carl,

one of the main Soviet experimental bases is in the region of Kazakhstan, and of course following this sighting, the covert member of the counterintelligence corps, posing as their version of a "UFOlogist" steps in to skewer the perceptions and to arouse superstition and paranormal ideas surrounding what is nothing more than a machine.

It appears that these "sightings" are staged to help establish the same kind of thought and mind control system as we have been seeing here in the U.S. for over fifty years. This is all in compliance with the 1955 Geneva agreement to keep all UFO sightings secret, or in other words, to maintain strict secrecy as regards the Russian UFOs.

Subject: Space cannon

The galactic economy will replace the global economy. Fewer humans will be required to run the communities in outer space, which explains the depopulation programs on Earth. The Space program is developing by leaps & bounds. Using cannons to propel astronauts to Outer Space, as described by Jules Verne & H.G. Wells are being tested.

I call your attention to the movie Things to Come (1936)," which portrayed a space gun that propelled astronauts near the moon:

<http://www.amazon.com/exec/obidos/tg/detail/-/B000056NWH/qid=1053967889/sr=2-1/002-3323660-5396826?v=glance&s=dvd>

In a recent forum post:

"Heron Aerospace (www.HeronAerospace.com) is a relatively new Space Company. We are currently making exciting progress toward the resurrection of cannon launch systems.

We are proud to announce that we have been granted access to a Naval Cannon stationed at White Sands Missile Range, to be used for tests this summer and over the course of the next year. We are also actively pursuing other projects, and forming collaborations in various fields.

To learn more about Heron Aerospace, visit our web site at:

<http://www.HeronAerospace.com> "

Carl,

this "space cannon" is related to the Nazi space cannon experimented with during WW II, which was further developed by Dr. Gerald Bull, the man who was assassinated by the Israelis after getting involved in construction of such a cannon in Iraq. Bull also erected a cannon for South Africa. This type cannon can shoot a projectile into orbit, and by use of correct coordinates can drop the projectile on any spot on earth. This represents a delivery system for nuclear weapons without the use of a rocket. The problem is that the cannon is so long and big that it takes quite a while to reposition it for another target.

William Lyne, "OCCULT ETHER PHYSICS: Tesla's Hidden Space Propulsion System and the Conspiracy to Conceal It", Creatopia Productions, second revised edition, third production, April, 2000, Printed in Canada.

Introductory Approach

Seeing that we are only conscientious students, not experts, in Physics, we'll deal here mainly with the social, ideological, philosophic and emancipatory aspects of this brilliant, pioneering work. Before we

comment, criticize or enrich this work, let us first read it, affirm it, understand it. Let's listen patiently to Bill, whether we agree with him or not. As far as I know him, he always does it likewise.

On the cover, partially quoting Bill, the publishers explain what Bill's book is all about: "*A re-discovery of what the author calls 'occult ether physics', the scientific/technical basis for a space-propulsion system invented in the late 19th century by Nikola Tesla, now used in the secret, exclusively man-made flying machines known as 'flying saucers' or UFOs.*"

Our world is a dominant and dominating State reality of "top secrets" of "strictly confidential information" and of "classified documents". During the "Burning of Mississippi", also during the "Hot War" epoch, the political argument for this military "secrecy" was to avoid that the "enemies", the "communists" or "nazis" - who are out there to get us - would get hold of "security material"; this remained so even during the "Cold War" period, and even more so, nowadays, in the "Reconciliatory Lukewarm Era" of Globalization.

As the publishers remark: "*The government conceals this invention behind false scientific theories, 'space alien' hoaxes, and false propaganda, disseminated through a controlled mass media.*" So, on a global scale, billions, including academic circles, researchers, students, teachers and professors, are being bamboozled, brain-washed, are mentally caught in an "'UFOlogy', 'new-age', 'paranormalist' and 'pseudo-debunker' network." And, euphemistically all this is called "modern education".

Before, innocent young minds were violated by "flying angels", with "Our Heavenly Father", relaxing and riding on the clouds, by an "ascending Jesus Christ", by a "flying Father Christmas", dressed in the clothing of Coca-Cola, driven on by reindeer power, by a "flying witch on a broom", nowadays, the poor kids have to believe in "flying aliens" and alien "flying saucers, pots and pans". And all these are entitled "education", "tradition", "culture" and "civilization".

Across the ages, it is really tragic, sad, macabre to see what dominant and dominating religion, ideology, mind and thought control had done to the "consciousness" of billions of members of the sonorous species *homo sapiens sapiens*. What is worse, you cannot even tell them the flowing truth, cannot explain to them what really has happened to their minds, how sick, how pathological, schizophrenic, paranoiac, alienated they have become. No matter whom you address, an erudite Nobel laureate or a poor Nigerian peasant, as soon as you tell them anything that detonates their personal, private *status quo*, their Establishment, immediately, all of them would send you directly to the nearest asylum, to the next mind and thought control centre. Sad to say, these billions are the real godforlorn "aliens" on this planet.

Thus "national security laws" eternalize obscurantism, ignorance and arrogance. Now, why did a small powerful ruling elite, across the 20th century, hide away from us the scientific and philosophic truth about Nikola Tesla's Technology and about Wilhelm Reich's "Orgone"? The latter was even declared "crazy" and was locked up in a United States madhouse. Meanwhile, Mickey Mouse stole his Orgone Cheese!

The social, political and economic reasons, and they are fundamental arguments in capitalism and imperialism, are obvious, are self-evident: A technology, based on the scientific discoveries of Tesla and Reich, would strip away the social, parasitic Draculian privileges, the Draconic political power and the Croesusian economic wealth of the global profit-mongers, of the giant moguls of monopoly capitalism, of the global power elite.

This would have an immediate anti-capitalist effect, it would set free emancipatory energy that would drive "all swine into the sea", would drown them forever in the emancipatory typhoon of "Free Energy". Yes, concerning this work, the publishers had made a most interesting prediction:

"Dynamite comes in small packages, and this little stick of scientific dynamite blows apart pseudo-scientific myths and instils the truth."

Well, let's give this stick some light, some fire. There we go

In his preface, Bill clarifies some central concepts, among them "cult" and "occult", and their common meanings, whether of a religious, bacterial, philosophic or organizational nature. In any case, here "occult" is to be understood as "secret" and "hidden".

Bill asks a self-answering rhetoric question: *"Is it possible that an entire area of physics has been declared virtually 'occult' and 'off-limits' to the public, or to private individuals, by a powerful group, so that all science education or data generally available to the public has been 'screened' to eliminate references to it?"*

He also wants to know whether *"the actual science involved in electro-propulsion" had been replaced by a "bogus science"*. In other words, on a world scale, he is questioning whether in specific spheres university students of Physics are deliberately being misled, are given hocus-pocus doctorates, are consciously being fed with obsolete, faked data and out-dated research materials. Of course, about this students of Modern History can sing the "Swan's Song"; their research material is already "classified" for the next half-a-century. About our real immediate history of the second half of the 20th century, we have no idea.

Then Bill identifies the "culprits", the *"high priests of this occult knowledge"*:

"the elite owners of the coercive monopolist corporate banking, industrial, mineral and related interests". And what do they allow? " ... the

initiation of certain scientists, military and government officials into their secret teachings".

He mentions some of the theories of "bogus science" in this specific field under investigation: "curved space", "time travel", "alien abduction", "Big Bang", "parallel universe", "interdimensional travel", "little green men", etc.

And then, Bill makes a crucial, fundamental statement:

"Before you decide there is no ether, or no flying saucers, or before you believe the often-told 'prime-time' lies that 'aliens' are here, or that time-travel is possible, you should ask yourself whether or not your thinking on these subjects has been conditioned by Big Brother's Biggest Lies."

Over the last months, during our discussions of the "Orwellian Present", in other related contexts, over and over again, we have asked this very same question!

Tesla And The "Flying Saucer"

After many years of intensive research and investigation, in 1993, Bill, a member of our "Pandemonium Crew", in his book "Space Aliens From the Pentagon" had arrived at the definite conclusion that "Flying Saucers Are Man-Made Electrical Machines". In "Occult Ether Physics", he explained:

"The flying saucer is a product of Nikola Tesla's life work, his most fundamentally important invention, for which all his other inventions were in pursuit of,"

Bill quoted Gary Taubes (Relativists in Orbit, 1997), who summarized the supposed degree of knowledge about physics on May 29, 1919; *inter alia*, " ... that we live in a curved four-dimensional space-time", that according to Einstein, a massive body spinning in space " ... would drag space and time around with it", thus, giving rise to the ideas of the so-called "frame-dragging" and "space curvature".

Ever since 1919, Tesla's electropulsive discoveries were simply suppressed. Bill then went on to explain Tesla's *Original 1875 Plan*, about his "turbine", about "wireless transmission of power" and what he all had in mind. While working on his "electropulsive ship", in the 1920's, in great need of money, he approached the U.S. government for financial help but of no avail. Already before, the Morgans and Rockefellers had declared his research work and piles of patents as being "off limits".

After trying everything possible to "market" his patents and inventions, finally, in total despair, *"the only power which Tesla seemed to have left, was that of withholding his discoveries from the world, to protect his secrets from the pilfering paws of the looters, unless he could receive the*

compensation and credit which he deserved, but that didn't matter, because they got it all before his corpse was cool, and never paid him so much as a dime for his trouble."

Over the ages, whether they had affirmed or negated, or even transcended the labour status quo, this had been the "fate" of so many scientific and philosophic pioneers of knowledge and emancipation. In this transhistoric category, we could identify a huge number of excellent geniuses, who were predicting future events and realities, long before the material, economic basis had been existent for their realization and necessity. They were caught in the arrogant fangs and ignorant pangs of decadent, obsolete modes of production, which were clinging to ruling class privileges, economic exploitation, political power and domination, social discrimination and human dehistoricization.

To mention just a few: the Greek astronomer, *Aristarchus Of Samos* (c. 310-230 BC), had been the first to maintain that the Earth rotates and revolves around the Sun. What was his fate? For this very reason, *Cleanthes the Stoic* declared that he ought to be indicted for impiety, for offending the Olympic Gods; others, having discovered diverse fundamental truths, were Democritus, Archytas of Tarentum, Plato, Aristotle, Spartacus, Bruno, Galileo, Thomas Muenzer, Meister Eckhart, Leonardo da Vinci, Orwell, Huxley, Patrice Lumumba, Kwame Nkrumah, etc. In our times, the unknown scientist and philosopher, Don Albert, was simply told that everything was fine, but that he should please come back again with his findings and discoveries in about 300 years from now. Of course, when the time would be ripe, when these theories serve their corresponding class interests, then, surreptitiously, they would be adopted and adapted by the establishment, hidden away for decades and centuries from the eyes of the public. Of course, like what is happening already now with the "obsolete" Marx, this very same thing, in a distorted, ideological version, may also happen with our Epistemology and Method, Science and Philosophy. However, it is very doubtful, well-nigh impossible, to accomplish this "miracle" with reference to our emancipatory endeavours.

Returning to Bill, and to Tesla's technological discoveries, the author wrote:

"After becoming aware of the true power of the 'force' - one hundred billion thousand trillion times stronger than gravity - Tesla began to pursue the idea of an 'on-board' power system for a manned craft to be used for transportation, with his 'wireless transmission of power' to be relegated to a robotic, remote controlled, electropulsive 'missile', for use in warfare, with electric power to be transmitted to missiles from the ground."

What does this imply? This simply means in interplanetary travel, *"that, so long as the electrical energy for propulsion could be transmitted from the earth, a space ship would require no fuel tanks."*

Now, let's look at the other side of the State coin, of "Democracy against Nazism", at the dark side of the Dollar, at its "In God We Trust", at what *Herbert Marcuse* critically had identified as follows: *"The True One Is The Whole One, but the Whole One is the False One!"* Thus, what happened to this great electropulsive discovery of Tesla? After having performed painstakingly minute and thorough research work, *Bill* himself made a startling discovery, that it had slipped into the eager hands of the German Nazi *Herrenvolk*, *"when Wernher von Braun acquired and began development of the 'p2' project at Los Alamos, New Mexico, in 1936, taking the project back to Germany in the fall of 1937, where it was developed at Peenemunde in the Baltic, until these secrets and others were traded to American corporations and the U.S. government in exchange, under Operation Paperclip, just after the armistice, for amnesty for many war criminals, along with an agreement for several thousand people to work for the U.S. government and American corporations. Anyone having important technical information was protected."*

In Caribbean slang, well, *whatamansay!!!*

In 1945, Tesla's saucer discovery again came under control of the U.S. government. Everything had to be done to avoid that this technology fell into private hands, to be used by private corporations. Should this technology fall into "false" hands, *Bill* explained to us the consequences, but also the implications and problems that the current ruling world giant corporations, the giga-oil companies, the mega-motor industry and the Global United States would then have:

"... a small, privately-owned flying saucer would cost less than an automobile to build, would use practically no fuel, would travel thousands of miles per hour, would last a long time, and would require practically no maintenance."

Imagine the following, no border problems anymore, no passports, no elections, just living anywhere, simply working everywhere, definitely paying no energy bills, taxes and customs duties, no traffic jams and controls, very easily escaping from the cops at 45 000 mph, hiding in the caves of Mars, on the week-end, playing hide and go seek in the Solar System, etc.; well, as its social material foundation, this authoritarian, totalitarian mode of production, this "New World Order" cannot yet allow such liberty, such equality, such fraternity, such a source of energy, free energy for anybody, for everybody. This, "democracy" -- the government of the people, of, bby and for the people - can and never would allow.

Concerning The Ether

Now, we have to burn the midnight oil, to put enough oil in our neurone lamps, in order to follow the following summary of the course of events. Brush off the dust and cobwebs from your old secondary school and college handbooks on physics, peep into them again, and there we go. The question here is: *To Be Ether Or/And Not To Be Ether?* Thus, better even, read *Bill's* book, of, by and for yourself! We will just highlight especially selected aspects here.

A healthy, sane, functioning brain can study and understand anything, especially this work, which touches quintessential emancipatory issues, no matter how new, far-fetched or difficult the material may seem to be. Thus, put your "brain" to the "iron test" and measure its intellectual capacity, rational ability and emancipatory potentiality. As *Hegel* and *Marx* had stated: "*Hic Rhodus, hic salta -- Here is the Rose, Dance!*" Start *hic et nunc* to sow Pandemonium to the Four Winds, and to reap the invincible Storm of Free Energy and Emancipation!

In the first chapter of his book, *Bill* explained "*The Occult Ether Theory and Electropulsion*". Kindly read this part all by yourself; it is complicated, and it presupposes a fairly "good" knowledge of physics. However, let's proceed to the next chapter, which certainly is of "great" interest to us; it deals with "*Exploring the Nature of the Ether*".

The author studied various theories about the nature of the "ether", and eventually accessed a copy of the classic, *A History of the Theories of the Aether and Electricity*" (1951), First Edition, 1910, by *Sir Edmund Whittaker*. And, students of modern physics, surprise, surprise!

"Neither the 1910 first edition nor the 1951 revision mentioned Tesla, ... Though information regarding Nikola Tesla was omitted, there is much valuable related information."

However, Whittaker mentioned something very interesting: he "*said that an alleged failure by ether theory proponents to observe the earth's motion relative to the ether, caused the downfall of the theory, but the facts show that the relativists, backed by corporate publishing interests, hastily dug the grave and threw the dirt over the corpse of ether theory while it was still alive, for the wrong reason.*"

Bill concluded that Whittaker's 1951 edition "*intentionally skewered important facts concerning electropulsion, which I have attempted to straighten out for you in this book.*" Then he presented a brief history and documentation of pertinent ether physics.

Max Planck, the originator of quantum mechanics, partially conscribed to the "carry-along" ether theory. He said "*that the ether had to be irrotational, carried along at the same velocity as earth near its surface, and compressible and subject to gravity like the atmosphere, in order for the theory to be true.*"

The discoverer of the electron, *J. J. Thomson* (1856-1942), "*conscripted to a different and more plausible ether theory*". Based on *Maxwell's*

earlier theory, in 1891, he stated that "*... the aether itself is the vehicle of mechanical momentum*", giving the amount per unit volume, and in 1893, he claimed to have discovered "*electromagnetic momentum*". Thus, he linked electromagnetism with momentum in a mathematical manner, in a way, repeating what Tesla himself had expressed in an earlier lecture of 1891.

Bill, however, pointed out that "*Tesla's theory was different from Thomson's, whose theory was incorrect.*" He continued "*... there is no way that Thomson could have reduced 'his' theory to practice or experimentally verified it.*" For this, he needed Tesla's laboratory. Most of Thomson's work was based on previous theories, also on Faraday, who stated in 1831 that "*movement of an electrostatically charged body is equivalent to a current, which was described as a tube of force created by movement and momentum.*" Apart from his theory of an elastic solid electric ether, and lines of magnetic force, Faraday considered all space as "filled"; it was Wm. Thomson (1824-1907), at the age of 17, based on Faraday, who had "*introduced into mathematical science the idea of electric action at a distance by means of a continuous ether.*" By 1846, his early conception was that "*material atoms move through the ether 'without displacing it or compressing it'*". Later Tesla adopted these concepts, by stating "*that the ether 'behaves as a fluid to solid bodies, and as a solid to light and heat'*".

Around 1853, Bernhard Riemann (1826-66), affirmed an ether "*which resisted compression and changes of orientation*", thinking that this resistance to compression logically brings about gravitational and electrostatic effects; while, on the other hand, that the resistance to changes in orientation results in bringing forth optical and magnetic phenomena; but, as Bill explained in detail in the following pages, "*he failed to develop these concepts further*".

Enough now for our tortured brains, next time we will move on towards "Cosmic Motion and Local Momentum"!

Cosmic Motion and Local Momentum

Remember, within the context of our Science and Philosophy, that Cosmos is a "concept", an intellectual fabrication or product of thought, a thought thing, arrived at by empirical investigation, theory, science and philosophy. *What is Cosmos, and what we think what Cosmos is*, are two different things. That we thought for millennia that the Earth is flat and that it does not move, and what is the real shape of the earth and that it really and truly moves, are two horses of different colours.

We call the term or idea "Cosmos" an intellectual Percept, derived from ontic perception. In fact, it is the material basis of Nature. Also philosophically, we have explained that Cosmos is related, is in Motion; similarly, in History, Nature is related to Society, is therefore, in Motion.

Also, we should recollect, as Kant and Hegel had explained already, that "space", "time" and "spacetime" are only intellectual inventions, what they really are, and whether they really exist in the way we think about them, that's another story.

Nonetheless, homo sapiens sapiens had created for himself a specific labour reality, an "historic" reality, within History, where his concepts, theories and things have their specific validity. Whether we like it or not, they also exist, but they are not the only existing things within Cosmos. We also have developed different levels, degrees and mensions of Motion that should not be mixed up, which not necessarily happen only within the parameters of Space and Time. We will see what Bill has to say with reference to the Cosmos and Motion.

Now, let's see how Bill in his book differentiated Cosmic Motion. He wrote:

"The earth orbits the sun at approximately 18.5 miles per second (66,600 mph). The solar system is orbiting the centre of the Milky Way much faster, and the Milky Way orbits the Magellanic Clouds much faster, and so forth."

With the above, he indicated a hierarchy of velocity that increases, from the moon, to the earth, to the sun, to the Milky Way, etc. Now, don't get dizzy or "cosmos sick", neither as a result of this tremendous velocity of our planet nor of the idea of travelling in your "flying saucer" at 45,000 mph., because these are insignificant as compared to electromagnetic velocity, simply because movement of force is relative to time.

Bill continued: *"In all, the earth's velocity and polarity relative to the ether continually varies according to its rotation, orbital position, and galactic cycle."* In other words, for example, when the earth finds itself between the sun and the Milky Way's centre, it rotates at a slower pace than when it moves "outside". He continued: *"As the earth rotates each day, its polarity of movement through the ether rotates 15.2 degrees per hour, with a rotational surface velocity at the equator of approximately 1,041 miles per hour."* Of course, this continuous change in polarity is barely perceptible, but it may modulate the gravity force, and -- what concerns us -- may even affect our emotional states.

If the earth's charge can be increased, and this is exactly what Tesla tried to do with his scientific gadgets, *"he could have thrown the earth's timing off, slowed it down, and possibly caused it to drift toward the sun."*

Furthermore, as Don Albert indirectly has explained already, Tesla probably could even have spliced it into halves. We could imagine for ourselves, by using the Tesla technology, what NASA could be able to do nowadays; probably, it could even stop any huge cosmic rock from striking the earth, or even move planets out of their orbits. This is not wishful thinking or wild "speculation"; it is the logical scientific conclusion of what Bill tried to explain.

Now, let us focus on Local Momentum and Celestial Movement. This relation is of scientific significance for us, when within the context of our Science and Philosophy, we have to explain Rest and Motion, and the inter-relations between them. You may recollect that on our Web Sites we tried to explain Rest, Rest towards Rest, Rest towards Motion, Motion towards Rest, Motion towards Motion, and the various Inter-Relations among them, even the Relation "Neither Rest Nor Motion". What follows now throws some scientific light on our philosophic reflections.

But, let Bill relate: *"It's an odd thing, momentum. If a body is in motion relative to earth, its momentum is in the direction of motion, yet as a body at rest on a spot on earth, it still has momentum along the spot's ultimate motion relative to the ether. The motion is compound, but the ultimate momentum of a body is truly a vector which represents all the forces acting upon it."*

If across life one has acted and thought for oneself, has developed one's own Praxis and Theory, in other words, has developed one's own Science and Philosophy, only then, one could comprehend and understand anything related to Emancipation. The above, and what still follows, are excellent examples of the intellectual and rational operation of a healthy mind which is not controlled and enslaved. Surely, we did not study modern physics, we don't even need to do it; what we did, we strove towards originality and authenticity, that is, we acted, thought and studied our own cosmic, natural science and ontic, social philosophy. Later we may even discover similarities between our concept "Einai" and the very "Ether" which we are discussing here. This is the master-key to any kind of emancipatory knowledge.

Bill favours such an inquisitive, interested attitude: only then " ... we have a more complex pattern of movement, and since a body which is in constant, compound, gradual, ever-changing motion relative to the ether, more interesting effects are bound to be found." Just by the way, he also commented on the infamous "Big Bang" theory, permanently propagated by NASA, by stating that *"the theory was created and promoted by the coercive energy monopolists, because of its apparent intent to negate the free energy available from the ether, due to what I call the 'Law of Conservation of Perpetual Motion' "*.

Now, an interesting philosophic query: Are macrocosmic relations of momentum, velocity and motion also valid within earthly parameters? The author explained:

"The same principles of momentum which apply to the cosmos must also apply to the motion of immediately local bodies, except that the effects are skewed by the presence of earth's pesky electric, magnetic and so-called 'gravity' fields." We could add: also due to the presence of a disastrous, technological chaos created on earth, as a result of the dangerously

advanced labour process, including its perverse energetic projects. To get rid of this alienating rubbish, of this labour debris, including its "Illuminati", would be an urgent immediate task of the cosmic, emancipatory process.

Towards the end of this chapter, Bill explained what Tesla's "free energy", which could accomplish the above, is all about:

"Electropulsion is a 'free energy' process in which energy existing in the environment --- 'gravity' and momentum --- are overcome by and replaced with the naturally stronger force of electromagnetism, to perform a greater amount of work during a given time, which theoretically is 10 to the 40th power times more work, using a smaller amount of 'input energy' to trigger the change. If 'energy' is 'the ability to do work', and 'work' is the 'movement of mass through a distance', then a stronger force will do more work over a given time period. A change of form of energy from a weaker to a stronger force (which exists in the environment) will use 'environmental energy' to do more work in a new way."

FLYING SAUCER OBSERVATIONS

Do "Flying Saucers" exist?

Horatio, for sure, there are more things built on Earth, and flying around in Heaven, than are dreamt of in your Ideology!

Let us briefly look at this issue. A superstitious, manipulated mind sees exactly that what has been indoctrinated by means of dissocialization into its very "soul". It is not strange that a staunch Christian believer would see angels flying around, or even the Virgin Mary appearing in the clouds. In other words, one sees with one's brain, or with that what is left of it.

As a result of the combined and unequal development of consciousness, one's "consciousness" reflects precisely the superstructural phenomena of our epoch, or the strange mixtures of diverse eras. Very few people live hic et nunc, in the combined and unequal "present"; even far less of them, in the anticipated "future", where today is yesterday's tomorrow. The absolute majority of "mankind" lives in delusive, delusory archaic, obsolete, absolutist, religious dimensions of "historical" reality, of alienation, of labour. For them "seeing is believing" and "hearing is deceiving"; "believing", "believing in facts", are in, and "thinking", theory, are out.

What follows now has nothing to do with these worlds of make-believe, "wishful-thinking", science fiction, lies, obeah, voodoo, black magic, "virgin" apparitions, changing wine into blood, ghost-hunting, poltergeist, and the like. Not because it is "incredible", is unbelievable, therefore, it is not true. As far as we are concerned, the following has nothing to do with "historic" truths or lies; it is neither true nor false. Now "work" it out all of, by and for yourselves what this incisively and

precisely means; otherwise, please, visit our web sites, and study our Science and Philosophy consciously, conscientiously.

Furthermore, carried away with the titillating and titivating tunes, with the drums of our emancipatory music, dancing to the exotic, erotic rhythm of our transcendental philosophy of the "other", of "otherwise", "more" and "furthermore", just happily give up the "ghost", by forever expelling the "ghost stories" and "fairy tales" from your minds; only then, we all would just be "great", we would feel "great", would just be "bang on", would we learn, apprehend, comprehend and understand the reality of "Flying Dutchmen" and "Flying Saucers".

In Chapter III, Bill related:

"What I began observing in 1946, and have continued ever since, are man-made

electro-propulsive flying machines which can hover, turn on a dime at high speed without flying apart, and accelerate almost simultaneously to at least 9,000 mph, without readily audible sound or sonic boom.

The ship I observed in 1953, in broad daylight, hovering at about 300 feet distance, about 250 feet above ground level, precessed at a high angle -- about 45 degrees -- and a low rate of about two precessions per second. Soon after I spotted it, it began to move away directly due west, quickly accelerating to about 800 mph, at which time it did two absolutely square turns - a right angle turn straight down and another right angle turn back to level flight -- then accelerated to a point of infinity above the horizon in three seconds."

Obviously, when unexpectedly you see something for the first time, you do not know precisely what you are seeing, then you will observe nothing, except perhaps some ideological chimeras or religious phantasms, however, in this case, Bill knew already exactly what he was seeing; in fact, living in the area where "flying saucers" are being produced, he has been awaiting the sight of one long ago already, and he also knew the necessary scientific details and particulars. This was not a case of "seeing is believing", it was one of "seeing is knowing". He continued to relate:

"The ship was constructed as if it were two 50-foot diameter stainless steel woks joined together clamshell fashion. It had concentric 'striations' -- grooves in its surface which appeared to be about one inch wide all over its surface -- which gave its bottom half the appearance of a giant 'spun-metal' wok, as it precessed with the sun's rays playing on its bright metallic surface. The sun was about ten degrees above the horizon at the time."

Now, how was this ship related to Tesla's technology and energy? Bill continued:

"As it precessed, it gave off a sparkling, 'rainbow-colored' electrical corona, like a metallic surface which was being electrified with high voltage Tesla currents. On the shadow side of the bottom away from the sun, as the ship precessed, there appeared a soft, 'cloudy', infra-red glow, which indicated the possible presence of microwaves, while the general 'rainbow' corona was apparently of high voltage electricity. As the ship began accelerating, the rainbow corona formed a sparkling scintillating trail behind the ship, which also showed a 'texture' of lines in the trail which appeared to indicate the frequency of the pulses. Since the lines appeared to be 'about' five feet apart at 'about' 200 mph, the frequency could have been 60 cycles per second -- a frequency which is very low, with the approx. 5-foot-spaced pulses coming at the quarter wavelength. This rough guess is based on what '200 m.p.h.' looked like from our vantage point."

Of course, in Tesla's time, derived from his 1899 Colorado Springs experiments, "microwaves" were still very "small", of only a few inches or feet. Between 1947 and 1953, at night, sleeping outdoor in the back yard, Bill had observed "whole squadrons of saucers". In his book, he gave further details about these other "sightings", including the best one of them all, made on a moonlit night while soaking in a hot tub; that's why he named this "Event": "Rub-a-Dub-Dub, Seven Folks in a Hot Tub". Read it for yourself, and enjoy it.

Political Control Technology

Before we continue with our appraisal of Bill's book, we would like to remark on the plans for a current political control technology in the European Union, which is already probably much more advanced in the USA. This simply implies, that in the very near future in the emerging Global State, which surreptitiously is already in operation everywhere, publication of books, revealing the truth about "flying saucers" and other "occult" current technological projects, including Internet chats and discussions exposing these "conspiracies", would soon be well-nigh impossible. Herewith, we want to highlight another important aspect of Bill's work. Remember the rhetorical question that he asked, and the logical implications:

"Is it possible that an entire area of physics has been declared virtually 'occult' and 'off-limits' to the public, or to private individuals, by a powerful group, so that all science education or data generally available to the public has been 'screened' to eliminate references to it?"

Now, let us look at the following document of the "European Parliament":

**" SCIENTIFIC AND TECHNOLOGICAL OPTIONS ASSESSMENT,
STOA,**

AN APPRAISAL OF TECHNOLOGIES OF POLITICAL CONTROL,

Working document (Consultation version), Luxembourg, 6 January 1998,
PE 166 499."

Although it states the following, nevertheless, it gives us an excellent idea of what is going on:

"This document is a working document. The current version is being circulated for consultation. It is not an official publication of STOA or of the European Parliament. This document does not necessarily represent the views of the European Parliament."

And what are the objectives of this research work? In how far do these plans of "technological political control" affect us? Well, read for yourself:

"The objectives of this report are fourfold: (i) to provide Members of the European Parliament with a guide to recent advances in the technology of political control; (ii) to identify, analyse and describe the current state of the art of the most salient developments; (iii) to present members with an account of current trends, both in Europe and Worldwide; and (iv) to develop policy recommendations covering regulatory strategies for their management and future control."

And what do the "seven substantive sections" cover respectively? Lo and behold!

- "(i) The role and function of the technology of political control;
- (ii) Recent trends and innovations (including the implications of globalization, militarization of police equipment, convergence of control systems deployed worldwide and the implications of increasing technology and decision drift);
- (iii) Developments in surveillance technology (including the emergence of new forms of local, national and international communications interceptions networks and the creation of human recognition and tracking devices);
- (iv) Innovations in crowd control weapons (including the evolution of a 2nd. generation of so called 'less-lethal weapons' from nuclear labs in the USA).
- (v) The emergence of prisoner control as a privatized industry, whilst state prisons face increasing pressure to substitute technology for staff in cost cutting exercises and the social and political implications of replacing policies of rehabilitation with strategies of human warehousing.
- (v) The use of science and technology to devise new efficient mark-free interrogation and torture technologies and their proliferation from the US & Europe.
- (vi) The implications of vertical and horizontal proliferation of this technology and the need for an adequate political response by the EU, to ensure it neither threatens civil liberties in Europe, nor reaches the hands of tyrants."

Now, enjoy the following list of gadgets and instruments of torture, of technological political control, already used since decades, and which nowadays are being perfected and improved technologically. And take note, the perpetrators are not all "Nazis", "Fascists", "Illuminati", "Communists" and "Terrorists", *au contraire*, they are Christians, are "Liberals", "Democrats" and "Republicans".

If this is happening on Earth, then you could imagine what is happening in the Solar System. Here are parts of the list of recent trends and innovation of horrible, horrendous "weaponry", options and torturing systems:

"1 Public Order - Tactical Options

2 Convergence of Police and Military Systems

3 Interception - Punishment

4 Cochrane Area Denial

5 Fingerprint Recognition Systems

6 Night Vision. From Vietnam to Belfast

7 Discreet Order Vehicles

8 New Arrest & Restraint Methods

9 Convergence and Riot Technology

10 Insect Like Images of Riot Police

11 US Peppergas Adverts

12 'Dum Dum' ammunition and effects

13 Wound effects of expanding ammunition

14 Frag 12. Pre-fragmented exploding ammunition

15 Typical forms of execution technology

16 Targetted Execution Technology

17 Special Force Killing

Section 4. Developments in Surveillance Technology

18 Parabolic Microphone

19 JAI Stroboscopic Cameras

20 Automated Vehicle Recognition Systems

21 US Made cameras in Tiananmen Square

22 CCTV in Tibet

23 Video Capture/Video Fit

24 Taps and Bugs

25 US/UK NSA European Communication Interception Network

Section 5. Innovations in Crowd Control Weapons

26 The Philosophy of Crowd Control Weapons

27 Israeli and Chinese Riot Weapons

28 Chemical Spray Backpack & Effects

29 Crowd Dispersion and Capture

30 French patients suffering severe burns from CS sprays

31 Capstun OC & Manufacture

32 British and German riot guns used in Northern Ireland

33 Injector Weapons

34 2nd Generation Less Lethal Weapons

35 Sticky Foam

36 Laser weapon systems

Section 6. New Prison Control Systems

37 Prison Control Technology

Section 7. Interrogation, Torture Techniques and Technology

38 Redress Trust Map of Torture States

39 Restraining Technology. Hiatt Leg Irons. Chinese Thumb Cuffs

- 40 British and Chinese Thumb Cuffs & Leg Irons
- 41 House of Fun
- 42 Hand Held Electro-shock Weapon
- 43 Electronic Shield
- 44 Taser Gun and Dart H
- 45 Tibetan Monk Palden Gyatso
- 46 Torture Techniques use in Uruguay
- 47 Chilean Torture Technique 1
- 48 Chilean Torture Technique 2
- 49 US Counter Insurgency Training at the School of the Americas
- 50 Chinese Electro-shock manufacture and quality control
- 51 Electro-shock weapons on display at Chinese Security Fairs

Section 8. Regulation of Horizontal Proliferation

- 52 Arwen Riot Control Weapon on display at COPEX
- 53 Electro-shock weapons offered at European Security Fairs
- 54 Supplying the security needs of authoritarian regimes in Latin America
- 55 Ispra Gas Riot Packs
- 56 SAE Alsetex Back Pack + on display at IDEF Military Exhibition in Turkey, 1995

57 Foreign Internal Security Equipment on display at IDEF 1995 (Turkey)".
 Are you still doubting that "Flying Saucers" are being built on Earth?
 Are you still believing that we have not yet reached *George Orwell's*
 "1984"? Do you still believe in the "human being"? In "democracy"?
 Do you still think that you are "well-educated", "well-informed",
 conscious of current "reality"? Well, then, check out for yourself the
 "STOA's Publications Web site:

<http://www.europarl.eu.int/dg4/stoa/en/publi/publi.htm>.

We are fully aware of the fact that "sublimation", "talking about more pleasant things", "to be positive", to see things "in a positive way", are the daily watch-words, however, exactly the above attitudes have played a decisive ideological role in nurturing our rabid obscurantism, our lethal ignorance, our mortal "Sleeping Beauty" doncareness, and our fatal *carpe diem* life style.

Concluding this aspect of *Bill's* work, we'll explain to you what is happening to the absolute majority of us, by means of an historical analogy. During the epoch of "European Discovery", the ships of the Conquistadors arrived at the coasts of America, Africa and Oceania, and the "natives" playing on the beaches noticed nothing. Only when the small boats appeared in the water, and were rowing towards the shore, could the "aborigines" notice and see anything. Then only, they had a point of reference, as a result of their own canoes.

The world of the "natives" had been exceptionally restricted, limited to their specific environment. In Polynesia, the inhabitants could not imagine where Angola or Guyana were situated on the globe, and, that at that very moment, as a result of an advanced technology, the Europeans were colonizing these "planetary" regions. The Africans in Ghana had no idea about the "accumulation of capital", about the creation of the "world market", and about the "mode of production of slavery". Then, to have taught them all these, to conscientize them, would have been the greatest waste of precious "time" on earth. Having had to explain to them, about Europe, about the Copernican Revolution, about the Reformation, simply would have been a Sisyphus labour pain. For them to have imagined "15,000 km away", the "Tower", the speed, the "knots" of a ship, all these, and much more, would simply have been out of question. They would simply have considered these "white gods" and their "fairy tales" as something from out of this world. All this has nothing to do with "native ignorance", "underdevelopment" or "backwardness", but simply with other realities, with other degrees of consciousness, of not being "up-to-date" with global, total, earthly processes and production forces. Now, in our "time", the absolute majority of us -- with reference to modern technology, to the NASA, to Space Colonization, to the "European Parliament", to the global machinations of the United Nations and the United States, the "White House" and the "Pentagon", to the "US Presidential Elections" --, we find ourselves in a similar situation as those natives and aborigines of yestermillennium; even, until today, they were not allowed to arrive at the level of industrial production of feudalist, absolutist Europe; still, they have not even accomplished the bourgeois-democratic revolution. Their ideological superstructure reflects the respective archaic trends and obsolete phenomena. In the Heart of Europe, around the Rockies, something similar is happening with the "consciousness" of the masses, of the working people.

That is why *Bill* warned:

"Before you decide there is no ether, or no flying saucers, or before you believe the often-told 'prime-time' lies that 'aliens' are here, or that time-travel is possible, you should ask yourself whether or not your thinking on these subjects has been conditioned by Big Brother's Biggest Lies."

Did Tesla Technology Also Fall In Other Hands?

Before we continue looking at *Bill's* "Occult Ether Physics", let us treat a related issue. We know that Tesla Technology fell into the hands of the Nazis, before it was again "saved" by the US Government. However, was there perhaps a "leakage"?

Did the Soviet Union also get hold of this technology? For sure, we cannot affirm this. However, it seems that East European scientists are hot on the Tesla trail.

Nonetheless, a while ago, *Bill Lyne* sent us a most important article on the web, concerning "*An Ultra-New Technology and Energy Break-Through*". Having read *Bill's* book and having become acquainted with the subject matter, with surprise, we noticed some similarities, and we began to ask some related questions.

But let us first introduce to you the work. *Valery I. Titarenko*, born on October 16, 1950, in Berezovka, Odessa region, Ukraine. Having studied at the Odessa Automotive Technical School (1974), and having done research work at the Odessa Institute of National Economy (1979), after his investigations had been experimentally verified in the physics laboratory, and because no analogous works exist, he claimed that he made a brilliant discovery for the future development of mankind.

He published his unique and outstanding discovery under the following nerve- and brain-wrecking title, which only erudite scholars would understand:

"The Law of Unity of Universal Forces of the Co-ordinate Standard Fourth-Dimensional Space-Substance; that point charges in the Solar Gravity-Torsion Constant are integral to the elliptical trajectories and to the space-time movements of celestial bodies in free-space. "

Of course, this is a very serious patented, copyrighted investigation, which is registered in the South Branch of Ukrainian International Academy of Original Ideas, under the code # 00701017, dated 10 February, 1997. Furthermore, the priority of expert opinion has been formally registered under code # 99126872, dated 20 March, 2000, in the Institute of Patent Examination, Kiev, Ukraine.

Nonetheless, we became interested and somehow suspicious and studied the contents as far as our comprehension could fathom the physical implications, trying to understand a few things. We observed some strange things, not unknown to us, within the realm of his " **FIELDS OF APPLICATION** ".

Inter alia, we read the following:

" * *In wireless power engineering, the generation of electricity from a physical vacuum. Alternative, clean energy, produced in co-ordinates, rather than from atomic, gas and other obsolete, archaic fuels, which produce environmentally hazardous waste products.*

* *The movement of gravitational objects, such as trains, ships and submarines.*

* *A new generation of torsion flying apparatus.*

* *A new technique for producing ultra-high temperatures at critical levels.*

** New materials and alloys which have no analogues in present technology.*

** Changing the mechanical trajectory of planets and comets.*

** A great number of other fields of application. "*

We immediately contacted *Bill* to discuss the issue. *Titarenko's* terms seemed very strange but definitely they referred to Tesla technology, to the usage of solar rays or energy. I asked *Bill*: *"What is supposed to be "vacuum energy" here? And what is the difference between "vacuum" energy and ether energy?"*

Bill commented: "Franz, this sounds like Tesla's use of "Primary Solar Rays", except this inventor uses some Relativist terminology, which is inconsistent to the discovery. This may be *Titarenko's* way of making the technology more palatable to those whom he has no time to "re-educate".

Since the original concepts were expressed in Russian, I was not entirely clear on what the inventor calls "coordinates"--- but these have been clarified to me as voltage, tuning of receiving apparatus to the correct frequency mentioned, magnetic flux density and field strength, and proper geometric orientation (angles), etc. In short, "re-creation of all the same 'coordinates' as those inside the sun, which produces the radiation in the first place". "

Surprisingly, *Bill* stated: :

"The inventor has heard of Tesla, complimented me on my excellent knowledge of his history, but was unaware that Tesla had done work involving this kind of "solar energy".

But, I insisted: *"Bill, is this investigation part of, another variety of, what you have defined as "bogus science"? If you reply in the affirmative, then the other questions practically become redundant, but, nonetheless, kindly comment."*

Bill remarked: " As far as I can tell, this is not 'bogus science', but an alternative discovery, which the inventor has misunderstood because of his Relativistic education (this is only to be expected, since that was the intent of the "educators", i.e., 'controllers'), unless, as I stated before, he is only trying to accommodate those

who have no understanding of ether physics, and has resorted to this incorrect description in order to induce interest."

Well, I continued to voice my inquisitiveness: *" What is supposed to be "vacuum energy" here? And what is the difference between "vacuum" energy and ether energy?"*

Bill replied: ""Vacuum energy" would be the same as "ZPR" ("Zero Point Radiation", i.e., Tesla's "Primary Solar Rays"). This radiation is emitted by stars, and as far as I understand, is well above the frequency stated by *Titarenko*, but you never know, the "establishment" may have hidden this one from us. I say "hidden" because they could not have missed it.

The ether is a carrier, not a source of energy. By using a vacuum, one can be certain that the energy is not coming from atmospheric gases, but something in the space encompassed by the vacuum. Some people call it "space energy". Any given volume of space has a huge amount of this radiation interpenetrating it from all directions, from stars throughout the universe. The frequency mentioned by Titarenko, in the orange-red spectrum, should not be able to penetrate the walls of his laboratory, much less the earth, so I believe the correct frequency may be well above what Titarenko states, in fact, well above the frequency of gamma rays."

I became more excited: *"What is the relation between this so-called 'new generation of torsion apparatus for space propulsion' with Tesla Technology, with 'electropulsion', with 'electrical energy for propulsion'? Compared to Tesla's Flying Saucer, what does this imply? "* A new generation of torsion flying apparatus?"*

Bill: " I'm not sure what Titarenko means by "torsion flying apparatus", unless he is referring to the torsion created by the spinning "tubes of force", and the effects of a magnetic field, rotating the plane of polarization. I don't clearly understand how Titarenko thinks this technology will work. He gave me an answer which I cannot find for the moment, something like "when the energy packet matches the momentum".

At any rate, it seems like it is on the same track as the Tesla stuff, because the Tesla propulsion system has been described as one in which "the magnetic field chases the electric field". The electrostatic pulses in advance of the craft create an 'a-magnetic' electric vacuum which is "chased" by an 'a-electric' magnetic field inside the ship. Titarenko himself does not seem to understand how the technology actually works, without resort to ether theory, but may be able to make it work (I have found this to be a common error of "free energy" researchers, trying to describe their discoveries in

Relativist terminology, when in fact it can only be described in ether physics terminology).

He says he has demonstrated it in the laboratory, but cannot afford to stage a demonstration for the present because he makes only \$30. per month, so a demonstration would only be possible for an interested party who could furnish the money for a demonstration. Titarenko is entitled to refer to it as a "new generation of torsion flying apparatus" so long as all the major governments of the world (including his own)---who ALL have flying saucer technology, but conceal it --- continue to deny the existence of the technology."

And finally, *" I know that Tesla Technology could achieve the following, but in*

Titarenko's view, with his method, how would the following be

accomplished?

'Changing the mechanical trajectory of planets and comets'? And what about the 'great number of other fields of application?'"

Bill explained extensively, in his own typical way:

"I don't know exactly what technical means Titarenko intends for *"changing the mechanical trajectory of planets and comets"*, but this part of his material is suspiciously like the statement included in *"Occult Ether Physics"*, which I extracted from Tesla's material. Tesla's system would be to electrically excite a body (a ship, planet, or comet) and move it with electrostatic pulses and high frequency, the same way that planets move in the first place, according to his *"Dynamic Theory of Gravity"*.

"A great number of other fields of application" merely refers to the obvious, every conceivable kind of transportation (cars, boats, trains, planes, planets), power generation, heat generation, you name it.

In short, every reason for the controlling elite to conceal the technology.

I believe that in the present times of socio-economic desperation of Post-Soviet society, the possibility for such discoveries to surface is multiplied. If I was a wealthy man, I would not hesitate to check this technology out further, to fund a demonstration, and to see what Titarenko has. I myself have a device which is implicitly simple (my *"Free Energy Surprise"*), which I believe accomplishes the same thing. A well-known research recently developed a generator based on my plans, to which he added an inductor (*"L-C circuit"*) tuned to 60 cps, filed a patent application in Japan, and invited Japanese investors to come for a demonstration. Two friends of mine were involved in the project. One helped prepare for the demonstration. If the demonstration was a success, there was to be a multi-billion-dollar contract signed. The Japanese came, the demonstration was a success, and the Japanese returned to Japan and sent a check for only \$5,000. Then the Japanese ordered a set of plans from me for \$10.00 (after apparently finding out that I was the source of the plans used by the researcher).

They were, after all, members of the Yakuza (the Japanese mafia). That was a bit of poetic justice, since the researcher had the backing of several former CIA people, who were virtually salivating at the possibility of getting all that Japanese money!"

Bill:

**I posted the following reply to your message in the General Discussion folder of the Delphui Revolution to Emancipatiob forum.
Carl**

Bill:

I totally agree with your comment. One reason why I like Franz's posts is these can be used as credible references. These will appeal to the audience of our Crew forums.

**I have written material using this format (e.g.,
www.newrenaissance.com).**

Recently, however, I have not used this format in my messages because these were previously posted on forums outside the Crew. I used a "Reader's Digest" -type format intended mainly to appeal to an audience who, based on their posts, would not respond to an academic style.

They seem to prefer posts that will address issues, and invite requests for documentation. So far, this has resulted in considerable replies and further discussion of many of my posts on those forums.

On another point... I discontinued use of my web address to automatically receive announcements of or replies to messages posted on Delphi forums (I was receiving an average of 75 messages daily mostly from non-Crew forums) So I am asking all visitors to Crew forums to please post their replies and/or e-mail these to me at czfz@earthlink.net.

Thanks.

Carl

From: Scott <Scott@imatech.com>

Hi Folks,

It's been a LONG time since I learned this stuff, but I assume rigorous analysis of a substance at the Atomic or Molecular Level (maybe according to Bonding/Spatial Distribution, other Parameters) confirms whether it's in a Solid, Liquid, Gaseous or Plasmatic State.

I just wonder about how clear-cut these Boundaries are and how well the rigorous Technical Criteria a Physicist or Chemist would apply translate to a layperson's understanding.

For example, one criterion youngsters are taught to identify Liquids is that they take the shape of their Containers.

What about a Superthick Gel which does not flow, is very difficult to compress, etc? Are there any such substances (man-made or in nature) which defy easy categorization?

Would much appreciate your replies,

Scott Schneider

Scott:

Interesting question. I am posting this message on various affiliated forums, and I am asking the visitors to reply to you at scott@imatech.com. I have included Bill Lyne: author, engineer, scientist and artist. Nikola Tesla's concepts of matter crossed the boundaries of liquids, solids and gases. Visit the "Nikola Tesla" websites using his name on your search engine. Many will agree that the standards states of matter are our perceptions.

Regards.

Carl.

Hi, folks:

I extend my thanks to Bill Lyne for describing this interesting concept. We welcome your comments.

Carl

An Ultra-New Technology and Energy Break-Through.

The investigations have been experimentally verified in the physics laboratory.

There are no analogous works.

Author: Valery I. Titarenko

Date of birth: 16 October 1950;

Place of birth: Berezovka, Odessa region, Ukraine;

[Image]

Education: higher economic;

Odessa Automotive Technical School (1974);

Odessa Institute of National Economy (1979);

The Law of Unity of Universal Forces of the Co-ordinate Standard Fourth-Dimensional Space-Substance; that point charges in the Solar Gravity-Torsion Constant are integral to the elliptical trajectories and to the space-time movements of celestial bodies in free-space.

The object of this discovery is in the depths of the active yellow star Sun, of spectral class G-3, at a distance from Earth of 150 million

kilometers. The substance of this discovery is the fourth-dimensional co-ordinates of a Solar gravity-torsion constant. This discovery is of a selective macromolecular system---a Standard. There are no other known constants with such features in our Galaxy. In the depths of the Sun, this system creates the conditions for exciting the continuous processes of

nuclear synthesis. The chains of direct, inverse bonds between the substance of these fourth-dimensional co-ordinates, excites one-second interval molecular pulses. Every molecular formation relates to a complex oscillation system, having a characteristic excitation spectrum of frequencies, which emit waves of ultra-light velocity, above 7000 Angstroms, in the spectrum of the orange-red band. Presently, the molecular clots of pulses of high density and temperature, are constantly reaching Earth naturally.

The pulse is fixed, as illustrated in fig. 1 The system in the depths of the Sun has the same features. It is twisted in a complicated manner in its right part, and is outcropped in the single point to the left. Issuing from my investigations, as verified by physics laboratory experiment, I concluded that by using the co-ordinates of the Solar constant, pulses of 109 joules energy are emitted naturally from the constant, giving humanity the real possibility for unrestricted use of the physical energy of space for one's own individual needs.

The work is registered in the South branch of Ukrainian International Academy of Original Ideas, under the code # 00701017, dated 10 February, 1997.

The priority of expert opinion has been formally registered under code # 99126872, dated 20 March, 2000, in the Institute of Patent Examination, Kiev, Ukraine.

FIELDS OF APPLICATION

*** In wireless power engineering, the generation of electricity from a physical vacuum. Alternative, clean energy, produced in co-ordinates, rather than from atomic, gas and other obsolete, archaic fuels, which produce environmentally hazardous waste products.**

*** The movement of gravitational objects, such as trains, ships and submarines.**

*** A new generation of torsion flying apparatus.**

*** A new technique for producing ultra-high temperatures at critical levels.**

*** New materials and alloys which have no analogues in present technology.**

*** Changing the mechanical trajectory of planets and comets.**

*** A great number of other fields of application.**

THE DIRECTION OF DEVELOPMENT

The modern electronics creates the conditions for the practical realization of huge possibilities from a physical vacuum. The present level of

electronics, using special circuit designs, has the possibility of operating at subnanosecond time intervals, producing the conditions for obtaining a huge power in pulse regime sufficient for exiting the vacuum. Vacuum energy is a new kind of power engineering. It represents a new class of electronic and torsion vacuum-energy generation. As the power engineering of the future, widely using such electronic techniques, it is beyond the present fuel-fired generation, being a new type of electronic power engineering, using vacuum effects in co-ordinates. In small, compact energy generators, one can achieve the very high density of energy necessary to excite the vacuum to the near-critical state, producing new charge-carriers of a macro-level energy, obtained from co-ordinates of the Solar gravity-torsion constant. The final product of this method of energy production from the real material medium---the vacuum---is very desirable, especially from the perspective of environmental safety. The energy released from the excitation of Vacuum-Substance can also be used in a new generation of torsion apparatus for space propulsion. In this respect, propulsion is obtained not from material objects having mass, but from the excited vacuum itself, when the wave packet containing the energy is equal to the energy of vacuum-excitation at the critical level. This method of space propulsion uses the energy hidden in matter, electronically transformed into the energy of an excited vacuum. This space propulsion method using vacuum-energy is of great significance. It is a new principal approach to both the propulsion method and the designing of vehicles. The method of propulsion and the engines used are absolutely clean from an environmental perspective, since the finished product of energy transformation does not contain matter. In essence, the use of vacuum-energy from co-ordinates, will influence the development of cold nuclear synthesis, giving new possibilities to solve the question of its paractical use in compact, high-energy plants. Under conditions of ultra-high temperatures, with high levels of energy, water becomes an appropriate alternative fuel, which may be used instead of chemical, nuclear and gas fuels .

Based on a contract, the author will perform the work for this method of production and use of vacuum-energy, from the co-ordinates of the Solar gravity-torsion constant.
