

Fat dissolving shots (not injectable in subq tissue for effects like Lipo C, it is a localized fat dissolver meant for DIY beauty treatments) ⚠️

Notes/Things to know:

-***Phosphatidylcholine*** (causes lipolysis to break down fat in the spot you inject)

Used in: Lipo C, Dr. Lipo V&Body

-***Deoxycholic Acid*** (it's an acid that breaks down localized fat where you inject)

Used in: Kabelline, Dr.Lipo, Lipo Lab

-***Lecithin*** is essentially the natural, less aggressive version of: *** phosphatidylcholine***, which is derived from organic versions of lecithin.

Used in: Lemon Bottle/Pine Bottle

Lipo lab: 💉

Has both ***phosphatidylcholine*** and ***deoxyholic acid*** to simultaneously burn fat

& it has L-Carnitine, which further supports localized fat loss where you inject.

Dr.Lipo (V+Body):

Has both ***phosphatidylcholine*** & ***deoxyholic acid*** simultaneously working to dissolve fat once again, with ***L-Carnitine***

But ***Dr.Lipo V*** (for face) has B vitamins, etc to help with tissue healing for places like the neck and cheeks.

Dr.Lipo Body has various peptides, so it can help with skin tightening after fat loss in areas like the stomach and arms (bat wings).

Kabelline: (Grey Kybella)

Has ***Deoxyholic acid*** to break down fat, along with ***L-Carnitine*** once again. Also has peptides and amino acids to help with skin tightening afterward.

***Lemon Bottle:** (Often marketed as a gentler, more natural fat dissolver.*

Utilizes ***b2*** to gently act as a localized fat metabolizer, ***bromelain*** helps reduce inflammation while assisting b2,

& ***Lecithin*** is basically the natural version of phosphatidylcholine; it's supposed to gently destroy and break down fat cells.

Conclusion:

Lipo Lab, Dr.Lipo are closely related in ingredients.

Kabelline is essentially grey “Kybella” and Kybella is FDA approved. 

Lemon bottle: Marketed as a more natural, gradual fat dissolver compared to all the others.

Pine bottle*  is something similar to *Lemon Bottle
