## **INTRODUCTION**

Explaining the background, problems, and importance of research, a brief literature review that relates directly to research or previous findings that need to be developed, and ending with a paragraph on research purposes. A balance must be kept between the pure and applied aspects of the subject.

## **METHOD**

Make sure that work can be repeated according to the details provided. It contains the technical information of the study presented clearly. Therefore, readers can conduct research based on the techniques presented. Materials and equipment specifications are necessary. Approaches or procedures of study, together with data analysis methods, must be presented.

## **RESULTS AND DISCUSSIONS**

Well-prepared tables and figures must be a significant feature of this section, because they convey the major observations to readers. Any information provided in tables and figures should no longer be repeated in the text, but the text should focus on the importance of the principal findings of the study. In general, journal papers will contain three-seven figures and tables. The same data can not be presented in the form of tables and figures. The results of the study are discussed to address the problem formulated, objectives, and research hypotheses. It is highly suggested that discussion be focused on the why, how,

and what else of the research findings can happen and how the research findings can be applied to other relevant problems. Explain your research contributions to science.

## **CONCLUSION**

Conclusions should be withdrawn on the basis of research findings, formulated concerns, and research purposes. The conclusion is presented in one paragraph without a numerical form of expression. Explain your research contributions to science

## **ACKNOWLEDGEMENT (Optional)**

Contributors who are not mentioned as authors should be acknowledged, and their particular contribution should be described. All sources of funding for the work must be acknowledged, both the research funder and the grant number (if applicable) should be given for each source of funds

## **REFERENCES**

Manuscripts are written using standard citation applications (Mendeley/Endnote/Zotero).

APA (American Psychological Association) 7th edition, the latest edition, reference style is required. More or less 80% of the references for literature reviews should be from recent (up to date) journals published in the last 10 years, but the rest of the 20% can be cited from research reports and/or articles. Cite relevant articles from the *English Education Journal*.
