# 1. Objective

The objective of this module is to explain how the Budget & Finance Department within the Ministry of Finance enters and controls GRMI's yearly appropriation. The Budget department is charged with ensuring expenditures are not made in excess of the authorized limits, or expenditures can be made in excess of the original budget if the correct steps are taken to amend the original budget.

The administration has chosen to utilize two (2) levels of control to oversee the spending against authorized yearly appropriations. Control is performed electronically through the BISAN system. These are broadly summarized as:

Level	Description of Control								
1	1 Yearly Budget Appropriation (Fund/SPG//Project /Ministry//Agency/Account per								
	approved budget law)								
2	Regular Allotment releases								
	(Not exceeding (Fund/SPG//Project /Ministry//Agency/Account values against total								
	budget)								

This module discusses how to process regular Allotment Reallocations (virements) when managing and controlling the execution of the GRMI budget during the fiscal year.

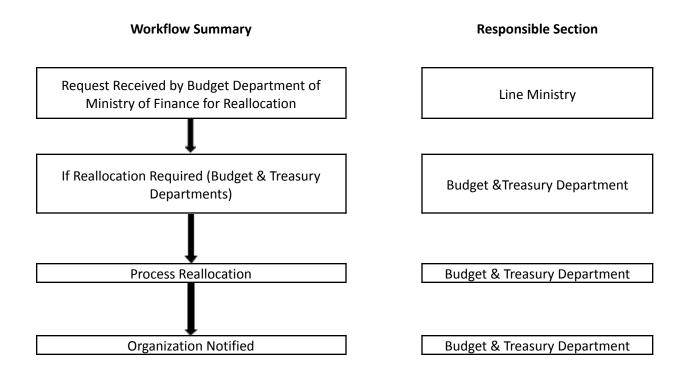

Controlling expenditures appropriately is an integral part of the overall expenditure management process. It is specific to the GRMI financial accounting/financial-management policies and procedures. As with all other modules in this policy and procedures manual, it starts with a schematic overview of the process then discusses each step in detail, highlighting the screens and approvals required at each step

# 2. Scope

This procedure is of interest to:

- Budget Department
- Treasury Department
- Line Ministries

# 3. Workflow/Process Flowchart

## 4. Detailed Process Procedures

This process description starts from the position that the Reallocation requests have been received from the relevant line Ministry, approved with Budget department and it is now a process of entering into Bisan, receiving the appropriate approvals and posting in Bisan so the budget can be controlled against the newly changed budget values.

## 4.1 Budget Reallocation

#### Budget Reallocation Process - Change Original Budget

Normally, a **budget reallocation** moves budget values from one budgeted line item level (Division/Account) within an organization at which Government has approved expenditure and adds it to another(s) budgeted item (Division/Account) within the same organization at which Government has approved expenditure in a particular fiscal year. Sometimes, there will be a reallocation between organizational entities but these occasions are rare and requires following a special approval process, generally similar to the process required for a supplemental budget. The result of budget reallocations is that the Parliamentary-agreed appropriated amounts have been changed and are no longer in agreement with amounts originally approved by the Government at the line-item level for non-supplementary approved changes, however, for regular budget reallocations, the total at the budget entity level remains unchanged.

Following is a description of the process involved to make such reallocation adjustments between budget lines in the same Organization.

#### 4.1.1 Receipt of Budget Reallocation Application

A reallocation request is sent to the Budget Department by the relevant organization seeking an adjustment using the mandated form. Please refer to Form 1A-Appropriation Reallocation.

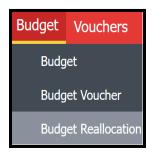

#### 4.1.2 Review of Budget Reallocation Application

The request is directed to the requisite employee of the budget department for initial review of the request to determine if there is sufficient budget to allow the "transfer from". If it passes this first review, the information is entered into Bisan and saved, awaiting the proper levels of approval.

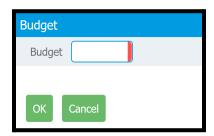

#### 4.1.3 Recording Budget Reallocation into Bisan and Approval

## Recording

**Step 1:** Select Budget/Budget Reallocation from the main header as follows:

This will open a window showing all reallocation vouchers. Since you want to create a new reallocation, click Add to button and the following definition window appears:

**Step 2:** Double click on the budget field and define the budget on which you are working. Select the budget and double click, you will be taken to the listing of all reallocation vouchers created to date for that budget. Since you want to create a new voucher, click on the Add button and the following further parameter screen will appear:

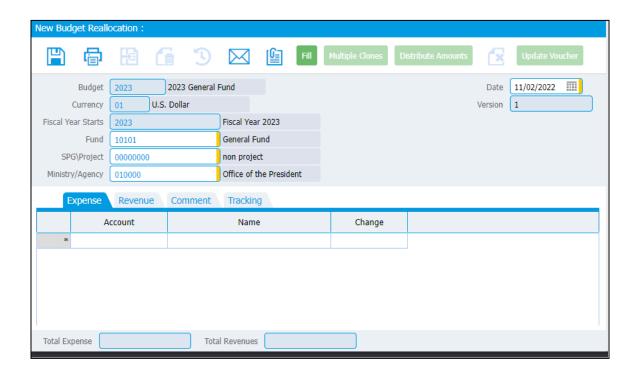

It is **very important** to understand that you have the option to define Fund, SPG/Project and Ministry /Agency (Division) here before creating the reallocation voucher or not completing and going directly to the reallocation voucher by simply clicking **OK** without completing any fields here (note, there is no red border around the cell therefore completion is not mandatory). By not completing the detail on this window, this opens up the reallocation voucher to allow you to reallocate across Fund, SPG/project and Ministry /Agency (Division). If you define the Fund, SPG/Project and Ministry /Agency (Division) at this first step, the voucher is restricted to only

allowing you to reallocate within designated Fund, SPG/project and Ministry /Agency (Division). The following table summarizes the options:

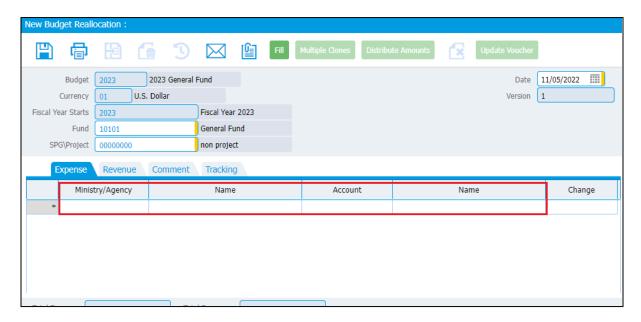

Combination	Functionality of Reallocation Voucher
Fund, SPG/Project	The reallocation voucher will only be able to reallocate the
Defined	original budget within the designated Fund, SPG/Project, for the
	Division and Account segments. Please note that the budget is
	defined for a specific Fund & SPG/Project which means there are
	no allocations between different Funds and SPG/Projects.
SPG/Project Undefined	Same as above option since the budget is not defined for a
	specific SPG/Project, this means allocation between different
	SPG/projects and Account is allowed. But the SPG/project has to
	be entered on every line item.
Division Undefined	The reallocation voucher will be able to reallocate the original
	budget across Divisions and Accounts.
Division Defined	The reallocation voucher will be able to reallocate the original
	budget across Accounts within the same division.

Once you define this window according to the above options available, the reallocation voucher will appear. The more defined in this window, the more information is fixed in the header of the reallocation voucher and the less defined the more information is required in the body of the voucher.

For example, when the **Fund**, **SPG/Project** and **Division** are defined here, the reallocation voucher will look as follows. Note that only the account can be defined in the body of the voucher.

Alternatively, if the **Division** is not defined, the reallocation voucher will look as follows. Note that the Division and Account must be defined in the body of the voucher.

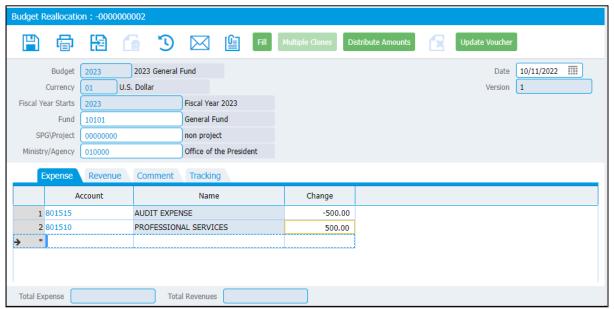

The next step is to complete the body of the voucher

**Step 3:** Complete expense tab to perform reallocation of expense budget or revenue tab to perform reallocation of revenue estimate.

#### **CONTROL NOTE**

This voucher must balance to zero before it can be posted. The voucher can be saved being out of balance but it cannot be posted as this is when the validation check is performed. The reallocation voucher only adjusts budget once it is posted.

The most likely transaction will be to complete the expense tab when performing a reallocation of the original budget. Assuming you want to create a reallocation within a Division but across Accounts and the value is 500 USD, the body of the reallocation voucher would look as follows. Remember, completing the required fields just means double-clicking on them and choosing the correct values.

Please note that the + and - entries balance to zero as indicated in no value appearing in the

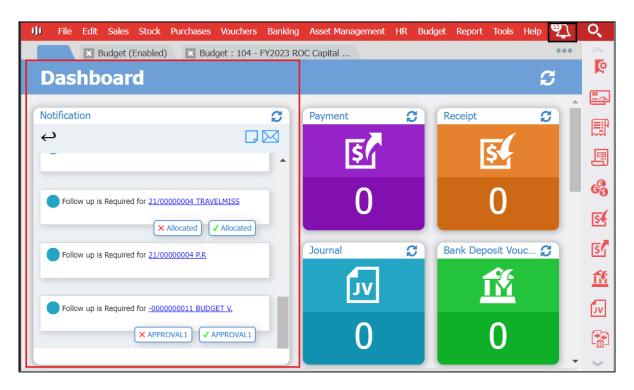

Total Expense field at the bottom of the voucher a value, then the voucher is out of balance and cannot be posted, however it can be saved.

When satisfied that the voucher is complete (remember, you can add lines as you wish by simply double clicking on the free line at the bottom of your entries and a new line will

automatically be opened), click Save button and reallocation voucher closes. This then automatically sends the voucher to the next person that must review/approve/post.

#### **Approval Process**

**Review/Approve/Post**: The next step is that the system has been set up so that the voucher is electronically sent to the Reallocation Officer's manager for review. This link is automatically configured in Bisan at time of setting up the workflow. The Approver will log onto Bisan and on the dashboard under the notification section vouchers pending approvals for this user are listed as showing in the screen shot below.

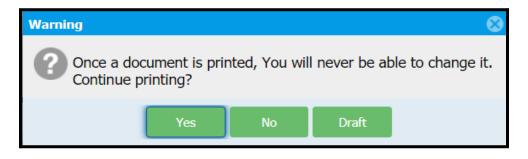

Select the outstanding items and double click one at a time to open and perform the review and approval process. Click **Approve** button in the header of the BRV when satisfied that the budget

reallocation has been entered properly and choose APPROVAL1

APPROVAL1 and this readies the voucher for the final approval stage APPROVAL2. Because the reviewer and Approver 2 is the same person, the voucher is still open on the screen. In order to perform the final step of

approving, click Print button, which then brings up the following window:

This gives you a final chance to amend the document. If you are satisfied, click YES and this will post the voucher and print a hard copy for your files for manual signature if required (see Appendix B for example).

If the reallocation voucher does not balance, the Approving person will see an error message as follows:

When this happens, the person will reject the voucher and it will be electronically returned to the person who entered the voucher for correction and the process will start over again from this point.

## 4.2 Recording Allotment Reallocation in Bisan and Approval

#### Allotment Release Reallocation Background

The processing of an Allotment Reallocation is different from the Budget Reallocation in that the original budget is **NOT** being changed. The only change that is happening <u>occurs at the Allotment Release level</u>. Unlike with Reallocations, the same types of restrictions/allowances do **NOT** apply since the original budget is not being adjusted.

#### 4.2.1 Receipt of Allotment Reallocation Request

An Allotment Reallocation request is sent to the budget department by the relevant organization seeking an adjustment.

#### 4.2.2 Review of Allotment Reallocation Request

The request is directed to the requisite employee of the budget department for initial review of the request to determine if there is sufficient allotment to allow the "transfer from". If it passes this first review, the information is entered into Bisan and saved, awaiting approval and posting.

#### 4.2.3 Recording Allotment Reallocation in Bisan and Approval

**Step 1:** Select Budget/Allotment Reallocation from the main header as follows:

This will bring up the following window to choose the budget

**Step 2:** Double click on the budget field and define the budget on which you are working. Once you define the budget, you will be taken to the listing of all allotment reallocation vouchers created to date for the respective budget. Since you want to create a new voucher, click on the

Add button and the following further parameter screen will appear:

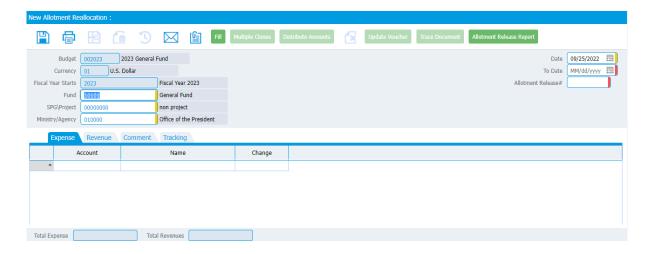

It is **very important** to understand that you have the option to define Fund, Organization (Ministry/Agency) and SPG/Project here before creating the reallocation voucher or not completing and going directly to the reallocation voucher by simply clicking **OK** without completing any fields here (note there is no red border around the cell therefore completion is not mandatory). By not completing the detail on this window, this opens up the reallocation

voucher to allow you to reallocate across Organizations and SPG/Project. If you define the Fund, Organization and SPG/Project here, the voucher is restricted to only allowing you to reallocate within a designated Fund/Organization/SPG-Project. The following table summarizes the options:

Combination	Functionality of Reallocation Voucher
Fund, Organization &	The reallocation voucher will only be able to reallocate original
SPG/Project Defined	allotment within the designated Fund and SPG/Project of the
	defined Organization.
Fund, Organization	The reallocation voucher will be able to reallocate original
Defined, SPG/Project	allotment across SPG/Projects within a defined Fund and
Undefined	Organization.
Fund, Organization	The reallocation voucher will be able to reallocate original
Undefined, SPG/Project	allotment across Funds, Organizations and SPG/Projects. This is
Undefined	the most flexible option but with this option, significant care
	must be taken to ensure there are no reallocation errors.

Once you define this window according to the above options available, the reallocation voucher will appear. The more defined in this window, the more information is fixed in the header of the reallocation voucher and the less defined the more information is required in the body of the voucher.

For example, when the **Fund**, **Organization** and **SPG/Project** are defined here, the reallocation voucher will look as follows. Note that only the account can be defined in the body of the voucher.

This will be the normal case for allotment reallocations and therefore reallocating appropriations across Funds, Organizations and SPG/Projects will not be contemplated here but the process is the same. The next step is to define the header and expense tab of the voucher.

**Step 3:** Complete the header of the voucher. The only mandatory fields to complete are two on the right-hand side of the voucher

Like in module 1.2 on budget allocations, you also need to define the **To Date** and **Funds Release** # that you wish to reallocate.

Field	How to Interpret & Use
Date	This is the "From" date on the Allotment Reallocation Voucher and is the
	date of creating the voucher. It should not be changed
To Date	This is the end date for when the Allotment (Allocation) covers. As an
	example, if the allocation is for the third quarter, therefore it would be
	completed with a 30 June 2021 date. If it is a half-year allocation then the
	proper date would be chosen for 6 months in the future.
Allotment	This is to indicate from which Allotment period you are reallocating
Release#	(Quarter 1 through Quarter 4) so it can be controlled and reported
	properly.

**Step 5:** Complete the body of the reallocation voucher (expense tab)

E	Expense	Revenue	Comment	Tracking			
	Ac	count		Name	Change		
*							
Total Ex	pense		To	otal Revenues			

As with the budget reallocation voucher, the allotment reallocation voucher is completed in the same manner and has the same control by having to be balanced with the + and – adding to zero. Please see detail on how to complete in section 4.1.

When satisfied that the voucher is complete (remember, you can add lines as you wish by simply double clicking on the free line at the bottom of your entries and a new line will automatically be opened), click Save button and reallocation voucher closes. This then automatically sends the voucher to the next person that must review/approve/post. Post the

voucher and print a hard copy for your files for manual signature if required (see Appendix C for example)

## **Approval Process**

The process is the same as listed in step 3 of section 4.1.4 above.

# 5. Accounting Entries in Bisan

Note, the budget module (including allocations of the budget) is separate from the General Ledger, therefore, there are no accounting entries in the General Leger when adding or editing the budget. Although the BCS is used to enter the budget, it is only used as the "link" or "bridge" between the General Ledger and Budget.
