

Joan Junkin - Best Practice Wound Care Certificate Course

As **the world of wound care continues to change** — with new treatment options, sicker patients, changing protocols, antibiotic resistance, and a rise in lawsuits related to wounds — **our practice *must* evolve with it.**

But it's extremely difficult to make a lasting change in a facility, even when we have new evidence to support best practices.

So, **we stick to the same outdated procedures because, *"it's the way our facility has always done it."***

Which means, the healing process takes longer and is more painful for our patients... despite our best intentions.

We want to break that cycle. That's why we developed this incredible online wound care course...

Let our **decades of in-the-field experience as wound care experts** guide you through:

1. Wound assessment techniques
1. Best practice wound treatments and products, including first-hand demonstrations of product application
1. Infection prevention WITHOUT antibiotics
1. And so much more!

You'll have lifetime access to **more than 15 hours of video instruction** and your **BONUS Wound Care Pocket Guide**, allowing you to complete this course at your own pace and to learn from the material forever.

Plus, you'll earn up to **15.5 CE hours** and your **Wound Care Certificate**.

Prove your commitment to healing wounds quicker and with less pain and ensure you won't be named in a future lawsuit over the quality of your care.

Master the Most Challenging Wounds:

The 50 BEST Solutions to Dramatically Improve Wound Healing
