

Interdependent Relationships in Ecosystems
2nd Grade Tri 3
PE's in the Storyline

- 2-LS2-1** - Plan and conduct an investigation to determine if plants need sunlight and water to grow
- 2-LS2-2** - Develop a simple model that mimics the function of an animal in dispersing seeds or pollinating plants*
- 2-LS4-1**. Make observations of plants and animals to compare the diversity of life in different habitats

Big Idea: All habitats include a variety of plants and animals that depend on each other for survival.

Storyline:

All habitats include a variety of plants and animals that depend on each other for survival. Plants in particular need water and sunlight and many plants depend on animals to assist with pollination and seed dispersal. Bees are an example of an animal that helps plants with pollination while collecting pollen and nectar to make food for themselves.
