

**Recommended to do this at the end of a day so you can go bed after this and restart the game.**

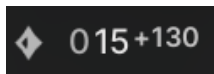

1. Install and open Cheat Engine
2. Open the game
- 3 Remove all crafting queues
4. Select The Alters process

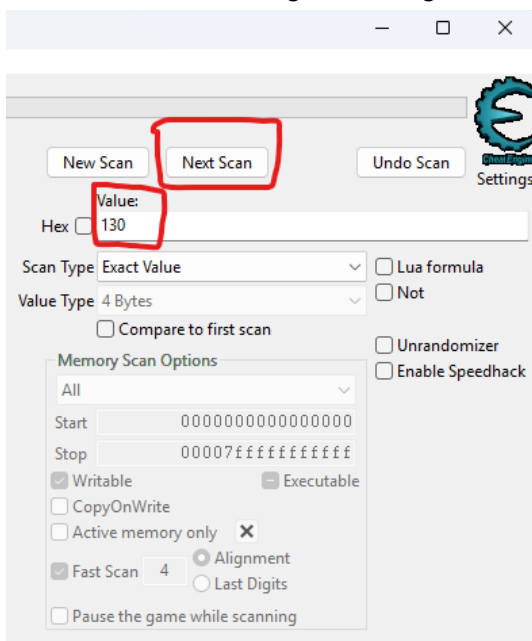

5. Enter the value you want to change (  ) in Value and press First scan

6. Return to the game and put something in the crafting queue that changes that value

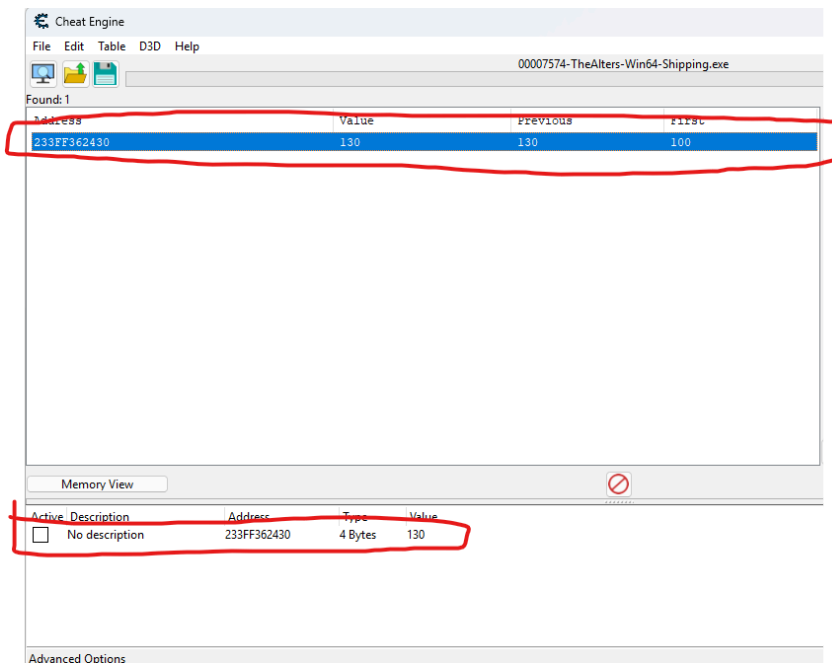

7. Return to Cheat Engine, change the Value press Next scan

8. Double click the record in Found section.

\*It may be possible multiple lines found. Double click them all.

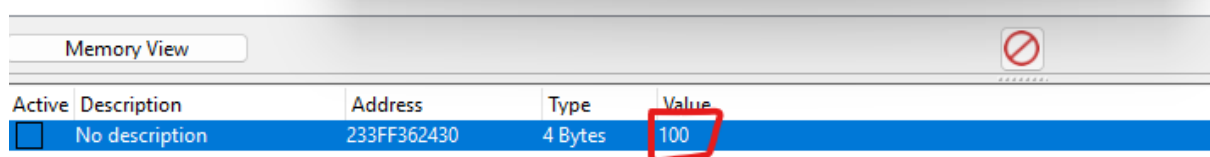

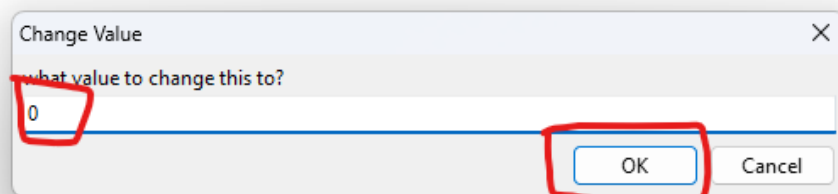

Then the record/s will be shown in the bottom

9. Remove the crafting queue to return to the problematic value

◆ 045+100

10. Double click on every line in the button of cheat engine that in value column has the problematic value. **Dont do this on lines that the value is different or the previous value with the item on the crafting queue.**

Enter 0 and press Ok.

10. Final step! Return to the game. You will see the value is still wrong there. You need to force the game refresh the UI by putting a item in the queue again (something that use the resource your fixing).

**Then the pain is over!**
