

Tech Bytes ~ Create Accessible Online Videos or Lectures (for free!)

Agenda

Example of a Closed Captioned YouTube Video:

<https://www.youtube.com/watch?v=ffkR-pqXGLs&index=3&list=PLRBcJAOS1oLPzRd iTqxZmMBL2m9SraOlG>

There are 3 steps to having an accessible (Closed Captioned) video:

1. Create your Video

You can use many methods in creating a video but it must in the right format to upload to YouTube (all available formats listed [HERE](#) plus instructions for converting to correct format)

- [Screencast-o-matic](#) (screen, voice & video)
- Quicktime (Mac only) (screen & voice)
- [Lecture Capture](#) (video & voice)
- Video recorder or your phone for simple video (video & voice)

2. Upload your video to YouTube

You can change the privacy on the video you upload so it's private, unlisted, or public. For more information on what those settings mean, click [HERE](#). Things to keep in mind:

- Give YouTube about 2-4 hours to do the auto-captioning (unless you are uploading a script)
- Videos need to be less than 15 minutes to upload to YouTube

3. Edit the Closed Captioning that YouTube did

You can edit the auto-transcription that YouTube does (hit or miss on the quality) or you can upload your own unformatted transcript using a text file.

- [Edit the auto-transcript file](#)
- [Upload a script as a text file](#)
