

**Take a look at the predictions of the weather in Pamplona for the next 30 days. Then, answer these questions using a complete sentence.**

- 1. According to the chart, which days of June will be the hottest? And the coldest?**

The hottest days will be 1st and 2nd of June.

The coldest days will be 18th and 19th of June.

- 2. How many “rainy days” do will have in June?**

According to the weather forecast will have 13 rainy days in June.

- 3. Will there be any sunny day? Which one or ones?**

There will be only one sunny day on Friday, 19th of June

- 4. Which is the most repeated temperature in June?**

20°C

- 5. Which is the the average temperature of the month?**

24'8 °C

**Clue/Pista:** para hallar la media, tienes que sumar las temperaturas de todos los días de junio y dividirla por el número de días de junio (en este caso 30).

**Ejemplo:** 1º)  $27+27+25+....= ?$  2º)  $? : 30 =$
