

Electrify Our Future Subcommittees

****Time commitments:**

Members will attend general meetings **once a month or once every two months** for a few minutes or so. Individual subcommittee meeting timings **may vary in frequency** depending on the committee and the work needed. Occasionally, we will have community events to attend together as a coalition in order for electrification promotion, but they do not happen very often, and anyone can volunteer depending on their availability.

Presentations:

Details: In this group, members would work on presenting to various advocacy organizations about electrification. Members would need to show **a certain level of commitment** as they may be expected to **lead/facilitate** presentations at different community events or events within their own school. Members would also work to communicate and reach out to other advocacy organizations as seen fit.

**Note: For those interested in presentations, there may be a mini workshop hosted soon to aid members with their electrification presentations.*

Publications:

Details: The members of this committee will focus on **writing articles on electrification and other environmental topics.** Members are in charge of the formal publications necessary for the coalition and are responsible for ensuring the maintenance of a written platform for student voice. Members would take on the task of writing 1 or 2 articles every other month, allowing for a more flexible rotation schedule.

Social Media/Website

Details: This would allow members to aid the coalition with their creative/artistic skills. We would also appreciate anyone with social media, campaigning, or tech experience to help us with educating the community about electrification through various **digital** platforms such as our Electrification website (the development is underway) and our EOF instagram.
