

GDD- Student Group Practice

RULES:

-Leave all your work on the board.

- Label everything

-

1. With your small group- Pretend you are calculating a short time period of growing degree days in the growing season.
2. Person one choose a date between May 1st and September 1st to start with.
3. Person two select the crop we are growing.
4. Person three start at the board with a marker.
5. Student four select a high for the day.
6. Student five select a low for the day.
7. All members do the math to determine the growing degree units for that day.
8. Leave that number on the board and after every student has served as the "Scribe" then add all the days units up to share how many growing degree days we had during that time period.
