

ASBESTOS NOTIFICATION

In the past, asbestos was used extensively in building materials because of its insulating, sound absorbing, and fire retarding capabilities. Virtually any building constructed before the late 1970's contained some asbestos. Intact and undisturbed asbestos materials generally do not pose a health risk. Asbestos materials, however, can become hazardous when, due to damage or deterioration over time, they can release fibers. If the fibers are inhaled, they can lead to health problems, such as cancer and asbestosis.

It is the intention of South Central Community Schools to comply with all federal and state regulations controlling asbestos and to take whatever steps are necessary to ensure students and employees a healthy and safe environment in which to learn and work.

You are welcome to review a copy of the asbestos management plan in our district administrative office of the school during regular business hours. Boyd Saliger or Jill Reeves are our designated asbestos program coordinator, all inquiries regarding the asbestos plan and asbestos-related issues should be directed to either of them at 712-464-7210 or 712-297-8621 respectively.
