A. LEARNING ACTIVITIES PLAN

A.1. COURSE IDENTITY

Module Name:	Philosophy of Mathematics Education
Module Level:	Doktor (S-3) / Doctor
Abbreviation, if applicable:	8400202038
Sub-heading, if applicable:	-
Course included in the module, if applicable:	-
Semester/term:	1 / First year
Module Coordinator(s):	Prof. Dr. Mega Teguh Budiarto, M.Pd.
Lecturer(s):	Prof. Dr. Mega Teguh Budiarto, M.Pd. Dr. Yusuf Fuad, M.Sc
Language:	Indonesia
Classification within the curriculum:	Compulsory course
Teaching format/class hours per week during the semester	Teaching format: lectures, tutorial assignment, and individual study. 2 x 270 minutes = 540 minutes = 9 hours lectures
Workload:	15 weeks per semester consisting of: <ul style="list-style-type: none">● 1 hour lecture (1 x 50 minutes) per week,● 2 hours assignments (2 x 50 minutes) per week,● 2 hours individual study (2 x 60 minutes) per week, Total workload: 14x2x270 minutes = 7,560 minutes = 5.04 ECTS*
Credit Point:	2
Requirements:	N/A

<p>Learning Goals:</p>	<p>Knowledge (KNO-1)</p> <p>CLO-1 Describe the ontology, epistemology, axiology, and aesthetics of mathematics and mathematics education according to a scientific and critical attitude</p> <p>CLO-2 Applying ontology, epistemology, and axiology of Mathematics and Mathematics Education to examine mathematics education problems by developing communicative and effective arguments</p> <p>CLO-3 Applying aspects of the philosophy of mathematics education to solve mathematics education problems through integrative studies.</p>																														
<p>Content:</p>	<p>The study of various aspects related to ontology, epistemology, axiology, and aesthetics of Mathematics and Mathematics Education which includes the concept of philosophy of science, the position of philosophy of mathematics, education, and mathematics education, philosophical thinking of mathematics according to the view of realism (Platonism, Aristotelianism), logicism, formalism, intuitionism, constructivism, finitism, structuralism, embodied theories, and fictionalism, educational philosophical thought according to realism, scholasticism, pragmatism, analysis, existentialism, critical theory, perennialism, essentialism, social reconstructionism, democratism, and progressivism, philosophy of mathematics education in terms of the status of mathematics education and the field other sciences, teaching mathematics, learning mathematics, various educational goals according to authoritarian views, industrial pragmatists, humanism, progressive educators, and general educators, learning theory according to behaviorism, cognitivism, constructivism, and enactivism, and the aesthetics of mathematics.</p>																														
<p>Study/exam achievements</p>	<ul style="list-style-type: none"> • Students are considered competent and pass if the final score calculated from the score of midterm exam, assignments, participation, and final exam is at least 55 or C. • Final score is calculated as follows: • 20% midterm exam + 30% assignments + 20% participation + 30% final exam • Final index is defined as follow: <table border="1" data-bbox="643 1568 1193 1960" style="margin-left: auto; margin-right: auto;"> <thead> <tr> <th>Index</th> <th>Converted Score</th> <th>Score Range</th> </tr> </thead> <tbody> <tr> <td>A</td> <td>4.00</td> <td>$85 \leq A \leq 100$</td> </tr> <tr> <td>A-</td> <td>3.75</td> <td>$80 \leq A- < 85$</td> </tr> <tr> <td>B+</td> <td>3.50</td> <td>$75 \leq B+ < 80$</td> </tr> <tr> <td>B</td> <td>3.00</td> <td>$70 \leq B < 75$</td> </tr> <tr> <td>B-</td> <td>2.75</td> <td>$65 \leq B- < 70$</td> </tr> <tr> <td>C+</td> <td>2.50</td> <td>$60 \leq C+ < 65$</td> </tr> <tr> <td>C</td> <td>2.00</td> <td>$55 \leq C < 60$</td> </tr> <tr> <td>D</td> <td>1.00</td> <td>$40 \leq D < 55$</td> </tr> <tr> <td>E</td> <td>0.00</td> <td>$0 \leq E < 40$</td> </tr> </tbody> </table>	Index	Converted Score	Score Range	A	4.00	$85 \leq A \leq 100$	A-	3.75	$80 \leq A- < 85$	B+	3.50	$75 \leq B+ < 80$	B	3.00	$70 \leq B < 75$	B-	2.75	$65 \leq B- < 70$	C+	2.50	$60 \leq C+ < 65$	C	2.00	$55 \leq C < 60$	D	1.00	$40 \leq D < 55$	E	0.00	$0 \leq E < 40$

Note	<p>*Total hours per 1 credit in 1 semester={ (1 credit x 270 minutes x 14 weeks)/60 minutes}= 63 hours. each ECTS equals with 25 hours therefore 1 credit in 1 semester equals 2.52 ECTS.</p>

A.2. COURSE DESCRIPTION

This course discusses various aspects related to the ontology, epistemology, axiology, and aesthetics of mathematics and mathematics education which includes the concept of philosophy of science, the position of the philosophy of mathematics, education, and mathematics education, philosophical thinking of mathematics according to the views of realism (platonism, Aristoteleion), logicalism, formalism, intuitionism, constructivism, finitism, structuralism, embodied theories, and fictionalism, philosophical thinking of education according to the views of realism, scholasticism, pragmatism, analysisism, existentialism, critical theory, perennialism, essentialism, social reconstructionism, democratism, and progressivism, philosophical thinking of mathematics education in terms of the status of mathematics education and other fields of science, teaching mathematics, learning mathematics, various educational goals according to the views of authoritarian, industrial pragmatists, humanism, progressive educators, and general educators, learning

theory according to the views of behaviorism, cognitivism, constructivism, and enactivism, and mathematical aesthetics.

COURSE LEARNING OUTCOMES (CLO) AND PROGRAMME LEARNING OUTCOMES (PLO) CORRELATION

Code	Course Learning Outcomes (CLO)	Charged Programme Learning Outcomes (PLO)
CLO-1	Describing the ontology, epistemology, axiology, and aesthetics of mathematics and mathematics education according to a scientific and critical attitude	KNO-1, SOC-1

CLO-2	Applying the ontology, epistemology, and axiology of Mathematics and Mathematics Education to study mathematics education problems by composing communicative and effective arguments.	KNO-1
CLO-3	Applying the aspects of the philosophy of mathematics education to solve mathematics education problems through integrative studies.	SKI-1

MODULE DESCRIPTION	The study of various aspects related to the ontology, epistemology, axiology, and aesthetics of mathematics and mathematics education which includes the concept of philosophy of science, the position of the philosophy of mathematics, education, and mathematics education, philosophical thinking of mathematics according to the views of realism (platonism, Aristoteleion), logicalism, formalism, intuitionism, constructivism, finitism, structuralism, embodied theories, and fictionalism, philosophical thinking of education according to the views of realism, scholasticism, pragmatism, analysisism, existentialism, critical theory, perennialism, essentialism, social reconstructionism, democratism, and progressivism, philosophical thinking of mathematics education in terms of the status of mathematics education and other fields of science, teaching mathematics, learning mathematics, various educational goals according to the views of authoritarian, industrial pragmatists, humanism, progressive educators, and general educators, learning theory according to the views of behaviorism, cognitivism, constructivism, and enactivism, and mathematical aesthetics. Lectures begin with the explanation of concepts and principles, assignments and discussions with students, and presentations with the use of ICT with an assessment including assignments (30%), participation (20%), midterm assessment (20%) and final assessment (30%).

A.4. MAPPING OF LEARNING OUTCOMES – COURSE OUTCOMES

A.4.1. The Expected Program Learning Outcomes (PLO) of Doctoral Program of Mathematics Education

ASPECTS	PLO	CODE
KNOWLEDGE	1. Able to master the paradigm of thinking in the philosophy of mathematics and education mathematics, the relationship between the two in science, and concepts cognitive psychology, as well as other concepts developed to solve problems mathematics education.	KNO-1
	0. Able to master advanced mathematical concepts	KNO-2
	0. Able to master the theory and research related to pedagogical principles in mathematics education that is original, creative, and innovative through research.	KNO-3
SKILL	1. Able to find new scientific ideas in mathematics education through interdisciplinary, multidisciplinary, or trans-disciplinary approaches	SKI-1
	0. Able to solve educational problem through integrative studies in life, culture, pedagogy, mathematics, and technology, and information.	SKI-2
	0. Able to carry out research and development of mathematics education beneficial to the public interest.	SKI-3
COMPETENCES	1. Able to make decision based on data and communicate research ideas, results and its argumentation written and oral	COM-1
ATTITUDE AND SOCIAL	1. Able to demonstrate national culture values as well as ethics academics in carrying out their professional duties	SOC-1
	0. Able to demonstrate scientific, critical, creative, and innovative attitude in developing mathematics education.	SOC-2

A4.2. The Education Program Objectives (PEOs) of Philosophy of Mathematics Education

PEO 1. Able to develop knowledge of mathematics education that is related to technology and professional practice creatively (Professional Accomplishment).

PEO 2. Able to solve mathematics education problems by using transdisciplinary approach in national and international level (Academic Accomplishment).

PEO 3. Having professional responsibility and **academic ethics** to manage the given task (General or Social Accomplishment).

A4.3. Mapping of Program Learning Outcomes (PLO) – Education Program Objectives (PEOs)

PLO	PEO		
	PEO-1	PEO-2	PEO-3
KNO-1	√	√	
KNO-2	√	√	
KNO-3	√	√	
SKI-1	√		
SKI-2	√	√	
SKI-3		√	
COM-1	√	√	
SOC-1			√
SOC-2			√

Note: √ = strong connection

B. COURSE ASSESSMENT

B.1. Assessment Rubric

Cognitive Criteria

1. The ability to give answers correctly
2. The ability to provide argumentation according to theory
3. The ability to provide systematic explanations
4. The ability to solve problems comprehensively

B.2. Assessment System

Final Assessment Course:

Group/Individuals Assignment	: 30%
Midterm examination	: 30%
Final examination	: 40%

Distribution of the weight of the ability of the test item

	PLO 1 (KNO-1)	PLO 4 (SKI-1)	PLO 8 (SOC-1)	Total
Group/Individuals Assignment	40%	40%	20%	100%
Midterm examination	40%	40%	20%	100%
Final examination	40%	40%	20%	100%

Success Criteria of Program Learning Outcomes (PLO)

Excellence	≥ 85
Good	≥ 70
Satisfy	≥ 55
Fail	> 0

Final index for postgraduate program defined as follow:

Score Interval	Score	Grade
$85 \leq A \leq 100$	4	A
$(80 \leq A- < 85)$	3,75	A-
$(75 \leq B+ < 80)$	3,5	B+
$(70 \leq B < 75)$	3	B
$(65 \leq B- < 75)$	2,75	B-
$(60 \leq C+ < 65)$	2,5	C+
$(55 \leq C < 60)$	2	C
$1(40 \leq D < 55)$	1	D
$(0 \leq E < 40)$	0	E

C. COURSE DEVELOPMENT

C.1. Academic Year 2018/2019 Odd Semester

Parameter	Σ of person	Percentage
Number of students taking this subject	12	100%
Number of students who pass at first attempt ($>C+$)	12	100%
Number of students who pass at first attempt ($= C$)	0	0%
Number of failed students after remedial (D & E)	0	0%

C.2. Problems Analysis

In 2018/2019 academic year in the Philosophy of Mathematics Education, there were 100% students had passed the examination at the first attempt. At the end of the Semester Examination there is not remedial test for students. Therefore, the improving learning strategies / methods were required to achieve the better results.

C.3. Solutive Strategy

New teaching and learning methods should be developed for the next academic years, consisting of improving and adjusting learning strategy with the context and content of the course.

D. APPENDICES

NASKAH UJIAN TENGAH SEMESTER GASAL TAHUN PELAJARAN 2022/2023

Mata Kuliah : FILSAFAT PENDIDIKAN MATEMATIKA
Dosen Pengampu : Prof. Dr. Mega Teguh Budiarto, M.Pd. & Yusuf Fuad
Program/Kelas : S3 Pend. Matematika/2022
Hari & Tanggal : Senin, 26 Oktober 2022
Durasi/Waktu : *Offline Test* (75 menit: 10.40 – 11.50)
Take Home Test (Sesuai Petunjuk)
Sifat : Hybrid Test

PETUNJUK:

- Pelaksanaan UTS luring (*offline*) **HANYA 75 menit**.
- Kerjakan semua 4 soal luring (*offline*) maupun 3 soal *take home test*.
- Jawaban *offline test* **HARUS** ditulis dengan **ballpoint secara teratur, terbaca**, dan terukur argumennya.
- Jawaban *take home test* dibolehkan dengan diketik pada kertas quarto A4, font *Times New Roman* dan spasi 1,15.
- Tanpa toleransi apabila jawaban Anda dapat diidentifikasi hanya mengcopy dan/atau mencontek dari jawaban "*any alien*" dan otomatis maksimal nilai akhir adalah E.
- Setiap pelanggaran dikenakan pemotongan nilai maksimal.
- Tambahan skor maksimal 20% apabila *your aswer is fully written in English*.
- Jawaban *take home test* harus dikirim dalam bentuk file ***.docx** ke email meqatbudiarto@unesa.ac.id dan yusuffuadmath@gmail.com dengan nama file: **Kelas_Tiga Angka Terakhir dari NIM_UTS Filsafat_Nama Lengkap_Universitas Pengirim** paling lambat **Selasa Oktober 01 Nopember 2022 pukul 09.00 WIB**.

SOAL

- (*Offline*) Sebuah koin mata uang memiliki permukaan "filsafat matematika" dan "filsafat pendidikan matematika". Lemparkan dengan penuh cinta (*filo*) koin mata uang tersebut sangat tinggi ke udara. Apakah Anda akan menemukan sebuah kepastian ketika koin mata uang tersebut jatuh di tanah dalam posisi berdiri tegak? Dan apakah kondisi koin yang jatuh tegak tersebut menggambarkan kondisi filsafat pendidikan matematika? Deskripsikan jawaban Anda dengan argumen yang rasional. (Skor 15)
- (*Offline*) Dalam filsafat sering diperkenalkan *Variis modes bene fit*. Sesuatu dapat berhasil melalui banyak cara yang berbeda. Sedangkan Pythagoras memperkenalkan pemikirannya bahwa *Number rules the Universe*. Bilangan memerintah/mengatur jagat raya ini. Akan tetapi Plato berpendapat bahwa *God ever geometrizes*. Tuhan selalu bertindak secara geometris. Mengapa ada perbedaan pemikiran antara Plato dan Pythagoras tentang konsep kesemestaan? Apakah dari visi filsafat pendidikan matematika, pemikiran Pythagoras dan Plato tersebut, masih relevan di era pesatnya perkembangan teknologi digital *smartphone-gadget* dan rencana berkehidupan *metaverse*? Uraikan argumen Anda secara rasional. (Skor 20)

3. (*Take home*) Ada empat aspek yang sering dikaitkan dengan kelahiran filsafat, yaitu ketakjuban, ketidakpuasan, hasrat ingin tahu, dan keraguan. Baca dan fahami baik-baik, dengan mengunduh dari internet, artikel dari Ernest, P. (2015): *The philosophy of mathematics education and Stephen Lerman's contributions*. Berdasarkan artikel Ernest, P. (2015) tersebut, diskusikan secara argumentatif rasional: (a) Mengapakah dalam artikel tersebut ada penekanan terkait kontribusi dari Stephen Lerman?; (b) Apakah Paul Ernest cenderung mendukung atau melakukan *academic-counter debate* terhadap pemikiran Stephen Lerman?; (c) Apakah yang dimaksud Paul Ernest terkait konsep *a broden sense dan a narrow interpretation of the philosophical of mathematics education*?; (d) Berdasarkan kontribusi Stephen Lerman, apakah konsep *top down perspective*, yang terkesan ditekankan dalam bagian simpulan artikel, masih cukup relevan dan layak (*feasible*) diadopsi dan diimplementasikan di Indonesia? (Skor 50)
4. (*Offline*) *Variis modes bene fit*. Dengan himpunan bilangan bulat sebagai *universum*, proposisi $1 + 4 = 5$ selalu bernilai benar. Sangat mudah difahami bahwa $2 + 5 = 12$, karena $5 + 2 + 5 = 12$. Bagaimanakah Anda menentukan hasil dari $9 + 12 = \dots$? Apakah hanya ada *satu dan hanya satu* cara untuk menentukan hasil Anda tersebut? Berdasarkan epistemologi sederhana yang komunikatif, bagaimanakah Anda menjelaskan hasil tersebut kepada siswa SMP/MTs atau SMA/MA/SMK? (Skor 20)

5. (*Offline*) Perhatikan 7 tahap pada pola perhitungan berikut ini.

$$\begin{aligned} & \left(5^{\frac{1}{4}} - 1\right) \left(5^{\frac{3}{4}} + 5^{\frac{1}{2}} + 5^{\frac{1}{4}} + 1\right) = \\ & \left(5^{\frac{1}{4}} - 1\right) \left[\left(5^{\frac{1}{4}}\right)^3 + \left(5^{\frac{1}{4}}\right)^2 + \left(5^{\frac{1}{4}}\right) + 1\right] = \\ & \left(5^{\frac{1}{4}} - 1\right) \left[\left(5^{\frac{1}{4}}\right)^2 \left(5^{\frac{1}{4}} + 1\right) + 5^{\frac{1}{4}} + 1\right] = \\ & \left(5^{\frac{1}{4}} - 1\right) \left(5^{\frac{1}{4}} + 1\right) \left[\left(5^{\frac{1}{4}}\right)^2 + 1\right] = \\ & \left[\left(5^{\frac{1}{4}}\right)^2 - 1\right] \left[\left(5^{\frac{1}{4}}\right)^2 + 1\right] = \\ & \left[\left(5^{\frac{1}{4}}\right)^4 - 1\right] = \\ & 5 - 1 = 4 \end{aligned}$$

Jadi, $\left(5^{\frac{1}{4}} - 1\right) \left(5^{\frac{3}{4}} + 5^{\frac{1}{2}} + 5^{\frac{1}{4}} + 1\right) = 4$

Berdasarkan ontologi–epistemologi di atas, kesimpulan apakah yang dapat Anda jelaskan tentang hasil perhitungan berikut ini (Skor 15).

$$\left(30^{\frac{1}{4}} - 1\right) \left(30^{\frac{3}{4}} + 30^{\frac{1}{2}} + 30^{\frac{1}{4}} + 1\right) \text{ dan } \left(100^{\frac{1}{4}} - 1\right) \left(100^{\frac{3}{4}} + 100^{\frac{1}{2}} + 100^{\frac{1}{4}} + 1\right)$$

6. (*Take Home*) Sebuah teorema matematis menyatakan bahwa: "Terdapat bilangan real positif yang kuadratnya sama dengan π ". Teorema tersebut menjamin eksistensi/keberadaan dari bilangan irasional $\sqrt{\pi}$. Dari aspek pendidikan matematika, jelaskan apa (ontologi) yang Anda ketahui tentang bilangan $\sqrt{\pi}$. Bagaimana (epistemologi) bahwa terdapat eksistensi/keberadaan dari bilangan $\sqrt{\pi}$. Deskripsikan pula manfaat (aksiologi) dari eksistensi/keberadaan dari bilangan $\sqrt{\pi}$. (Skor 20).
7. (*Offline*) Coba ikuti apa yang pernah dinyatakan oleh Georg Cantor (1845-1918). Pikirkan ruas garis yang panjangnya satu satuan, dengan titik ujung 0 dan 1 sehingga dipunyai interval tutup $[0, 1]$. Bagi ruas garis tersebut menjadi tiga bagian dan tinggalkan/buang pertiga bagian tengahnya, sehingga

diperoleh dua subinterval $\left[0, \frac{1}{3}\right]$ & $\left[\frac{2}{3}, 1\right]$. Cermati bahwa pertiga bagian tengah $\left[\frac{1}{3}, \frac{2}{3}\right]$ sudah ditinggalkan/dibuang, berarti panjang ruas garis tinggal $\frac{1}{3} + \frac{1}{3} = \frac{2}{3}$, karena sudah berkurang $\frac{1}{3}$ -nya. Bagi masing-masing subinterval menjadi tiga sub-subinterval dan buang masing-masing bagian tengahnya sehingga diperoleh sub-subinterval berikut: $\left[0, \frac{1}{9}\right]$, $\left[\frac{2}{9}, \frac{1}{3}\right]$, $\left[\frac{2}{3}, \frac{7}{9}\right]$, $\left[\frac{8}{9}, 1\right]$. Cermati bahwa dua bagian dari masing-masing pertiga bagian tengah sudah ditinggalkan/dibuang, berarti panjang ruas garis berkurang lagi dengan $(2 \times \frac{1}{9} = \frac{2}{9})$ -nya. Lanjutkan cara pembuangan pertiga bagian tengah sampai tak berhingga proses. Maka diperoleh panjang ruas garis yang dibuang adalah

$$\frac{1}{3} + \frac{2}{9} + \frac{4}{27} + \dots$$

Ternyata jumlahan di atas merupakan suatu deret geometri. Mudah dihitung bahwa penjumlahan dari bentuk di atas adalah $\frac{a}{1-r} = \frac{\frac{1}{3}}{1-\frac{2}{3}} = 1$. Karena panjang ruas awal adalah satu satuan dan panjang ruas garis yang dibuang ternyata juga satu satuan, menurut pemikiran Anda, apakah benar pola pembuangan ruas garis yang dilakukan oleh Georg Cantor menghasilkan sesuatu yang tidak bersisa? Jelaskan jawaban Anda dengan argumen yang rasional. (Skor 20)

8. (Take Home) Cermati dan pilih salah satu dari ungkapan filsafati di bawah ini

Engkaukah Cinta nan Pasti

Fly away, fly away, and so far away
 Begitu selalu bisikan manjamu ketika aku mulai lelah menggapai
 Banyak kata terbentang bagai pujangga bermimpi
 Menyiram kegalauan tan bertepi
 Mengaduk ambisi sepi

Shine on you crazy diamond
 Ketika kegelapan kata-kata membelenggu sikapku yang kekanakan dan bloom
 Padahal belajar seharusnya membentang seluas horizon
 Haruskah aku mundur kembali
 Melepasmu melesat bagai ilusi

Can anyone motivate me?
 Hausku akan cinta yang berujung pasti
 Teduh berhangat dalam senyum indah berwewangi
 Selalu melangkah meskipun terjatuh dan terjatuh lagi
 Dalam tatap kedua matamu yang penuh cinta sejati
 Yang selalu hangat menebar pesona diskusi
 Memahami dan selalu mengisi
 Tanpa henti langkah kaki *whenever I must fly away and again so far away*

Apa komentar Anda tentang "filsafati" di atas? Cinta siapakah yang dikejar dan dirindukan tersebut? (Skor 15)

==0o0 God Bless Mathematics Educators 0o0==

3. (a) Dalam artikel tersebut ada penekanan terkait kontribusi dari Stephen Lerman, karena adanya pendekatan *top down* dalam filsafat Pendidikan matematika yang dikembangkan oleh Stephen Lerman, dimana pendekatan *top down* terhadap filsafat dalam penelitian Pendidikan matematika menggunakan cabang abstrak filsafat yang menyediakan kerangka kerja konseptual untuk dianalisis. Stephen Lerman menganggap bahwa penelitian Pendidikan matematika mengacu pada ontologi dan metafisika, epistemologi, filsafat sosial, etika, estetika metodologi atau cabang filsafat lainnya. Sedangkan menurut Ernest 2012 ontologi dan metafisika belum banyak diterapkan dalam penelitian Pendidikan matematika, lebih pada penggambaran estetikanya. Namun epistemology, filsafat sosial, etika dan metodologi telah digunakan dalam penelitian Pendidikan matematika waktu itu. Dalam hal ini Stephen Lerman memberikan kontribusi yang signifikan. Lerman menentang pembelajaran yang hanya berpusat pada pengetahuan, lerman lebih menekankan pembelajaran investigasi dan pemecahan masalah.
- (b) Paul Ernest cenderung mendukung pemikiran Stephen Lerman, sesuai dengan pernyataan "*In my view it is easier to locate Stephen Lerman's contribution to the philosophy of mathematics education by using such a 'top down' approach*". Menurut Paul Ernest, pendekatan *top down* dimungkinkan untuk mendefinisikan filosofi Pendidikan matematika secara ekstensif karena banyaknya pertanyaan dalam pendekatan *bottom up*, di mana topik dan masalah yang dibahas dalam penelitian Pendidikan matematika digunakan sebagai kerangka kerja untuk memetakan berbagai peranan dalam filsafat Pendidikan matematika. Hal ini dilakukan sebagai pengambilan sudut pandang dari cabang filsafat yang berbeda sebagai kerangka dan analisis.
- (c) Interpretasi sempit dari filosofi pendidikan matematika menyangkut tujuan dan dasar pemikiran dari praktik belajar mengajar matematika. Hal ini berpengaruh pada peran guru, pembelajar, dan matematika dalam masyarakat dan nilai-nilai yang mendasari kelompok sosial yang relevan, di samping pengajaran dan pembelajaran matematika. Namun pandangan yang lebih luas tentang sifat filsafat pendidikan matematika menimbulkan pertanyaan yang lebih luas. Apa itu matematika? Bagaimana matematika berhubungan dengan masyarakat? Apa itu belajar (matematika)? Apa

itu mengajar (matematika)? Bagaimana status pendidikan matematika sebagai bidang pengetahuan?

Pengertian sempit yang bisa diterapkan dalam mengartikan kata 'filsafat' dan 'pendidikan matematika'. Pendidikan matematika dipahami dalam pengertian paling sederhana dan paling konkret menyangkut kegiatan atau praktik mengajar matematika. Jadi arti sempit dari 'filsafat pendidikan matematika' menyangkut tujuan atau alasan di balik praktik pengajaran matematika 'Apa tujuan dari pengajaran dan pembelajaran matematika?' merupakan pertanyaan yang penting dipertanyakan. Masalah belajar mengajar matematika, tujuan dan alasan belajar matematika, peran guru, peserta didik, dan matematika dalam masyarakat dan nilai-nilai yang mendasari pendidikan matematika, serta kelompok sosial yang terlibat.

- (d) Menurut saya, konsep *top down perspective* masih cukup relevan dan layak diadopsi dan diimplementasikan di Indonesia, karena **epistemologi** menyangkut teori pengetahuan dan dapat diambil untuk memasukkan sifat pengetahuan matematika, termasuk sarana verifikasi, dan proses menjadi tahu, atau belajar. Jadi pertanyaan yang diajukan (Apa itu matematika?) dan (Apa itu belajar matematika?) bisa terjawab. Di mana epistemologi memeriksa beberapa pertanyaan utama mengenai kebenaran, makna dan kepastian, dan cara-cara berbeda untuk menafsirkannya. **Filsafat sosial**, Lerman 1998, Lerman 2006, berpendapat bahwa banyak pertanyaan dan masalah dalam penelitian Pendidikan matematika dapat didekati dari landasan sosial dan budaya. Hal ini sesuai dengan keragaman budaya yang ada di Indonesia. **Etika** masuk ke dalam penelitian pendidikan matematika dengan beberapa cara termasuk perhatian dengan nilai-nilai, dengan pendekatan keadilan dan kesetaraan sosial, dan melalui etika metodologi penelitian. Dalam Lerman (1992), Steve mengacu pada filosofi emansipatoris Paulo Freire untuk menyatakan bahwa belajar matematika dapat menjadi kegiatan revolusioner dalam perjuangan untuk keadilan sosial dan kesetaraan. **Metodologi**, menurut Steve ada kerangka yang berbeda dan filosofi yang mendasari gaya penelitian Pendidikan matematika serta sikap filosofis dari peneliti Pendidikan matematika, baik sebagai intelektual yang kritis maupun akademisi fungsional. Dengan demikian, konsep *top down perspective* perlu diadopsi dan diimplementasikan di Indonesia karena sesuai dengan kondisi sosial budaya rakyat Indonesia.

6. Secara **ontologi**, apakah bilangan $\sqrt{\pi}$ ada? Tentu ada, sesuai dengan pernyataan/teorema "Terdapat bilangan real positif yang kuadratnya sama dengan π . Berdasarkan teorema ini, maka tentu ada bilangan $\sqrt{\pi}$. Dan bagaimana cara saya menjelaskan kepada siswa tentang $\sqrt{\pi}$ "

Jika saya menjelaskan kepada siswa SMP, maka $\sqrt{\pi}$ **gantilah** dengan $\sqrt{3,14}$ atau $\sqrt{\frac{22}{7}}$

Jika saya menjelaskan kepada siswa SMA, maka $\sqrt{\pi}$ **dekatilah** dengan $\sqrt{3,14}$ atau $\sqrt{\frac{22}{7}}$

Jika berbicara dengan mahasiswa, maka $\sqrt{\pi}$ **adalah** $\sqrt{\pi}$

Jadi $\sqrt{\pi}$ **adalah** $\sqrt{\pi}$

Secara **Epistemologi**, bagaimana membuktikan $\sqrt{\pi}$?

Bilangan $\sqrt{\pi}$ karena adanya pernyataan matematis: "Terdapat bilangan real positif yang kuadratnya sama dengan π "

Bukti:

Misalkan $S = \{S \in \mathbb{R} | S > 0 \wedge S^2 < \pi\}$

$1 \in S$ karena $0 < 1^2 < \pi$, jadi $S \neq \emptyset$

$2 \notin S$ karena $4 > \pi$, berarti 2 adalah batas atas S , karena $S \neq \emptyset$ dan S batas atas, maka S mempunyai Supremum.

Misalkan $x = \text{supremum } S$

Klaim: $x^2 = \pi$

Misalkan $x^2 < \pi$

Maka $\pi - x^2 > 0$

karena $x > 0$, maka $2x + 1 > 0$

Sehingga $\frac{\pi - x^2}{2x + 1} > 0$

Maka ada $n \in \mathbb{N} \ni \frac{1}{n} < \frac{\pi - x^2}{2x + 1}$

Perhatikan bahwa untuk suatu $n \in \mathbb{N}$ diperoleh:

$$\begin{aligned} \left(x + \frac{1}{n}\right)^2 &= x^2 + 2\frac{1}{n}x + \frac{1}{n^2} \\ &< x^2 + 2\frac{1}{n}x + \frac{1}{n} \\ &< x^2 + \frac{1}{n}(2x + 1) \\ &< x^2 + \frac{1}{n}(2x + 1) \\ &< \cancel{x^2} + \frac{\pi - x^2}{\cancel{2x + 1}}(2x + 1) \\ &< \pi \end{aligned}$$

Maka $\left(x + \frac{1}{n}\right)$ adalah elemen dari S

Berarti $x + \frac{1}{n} < x \leftrightarrow \frac{1}{n} < 0$ (tidak mungkin terjadi atau kontradiksi)

Jadi $x^2 < \pi$ **tidak mungkin**

Misalkan $x^2 > \pi$

Maka $x^2 - \pi > 0$

karena $x > 0$, maka $2x > 0$

Sehingga $\frac{\pi - x^2}{2x} > 0$

Maka ada $m \in \mathbb{N} \ni \frac{1}{m} < \frac{x^2 - \pi}{2x}$

Perhatikan bahwa untuk suatu $m \in \mathbb{N}$ diperoleh:

$$\begin{aligned} \left(x - \frac{1}{m}\right)^2 &= x^2 - 2\frac{1}{m}x + \frac{1}{m^2} \\ &> x^2 - 2\frac{1}{m}x \\ &= x^2 - \frac{1}{m}(2x) \\ &> \cancel{x^2} - \frac{\cancel{x^2} - \pi}{2x}(2x) \\ &> \pi \end{aligned}$$

Maka $\left(x - \frac{1}{m}\right)$ adalah suatu batas atas dari S

Berarti $x < x - \frac{1}{m} \Leftrightarrow 0 < \frac{1}{m}$ (tidak mungkin terjadi atau kontradiksi)

Jadi $x^2 > \pi$ tidak mungkin

Karena tidak mungkin $x^2 < \pi$ dan $x^2 > \pi$ haruslah $x^2 = \pi$

$$x^2 = \pi \rightarrow x = \sqrt{\pi}$$

Manfaat keberadaan/eksistensi $\sqrt{\pi}$ adalah sebagai **bukti** bahwa **tidak ada** bilangan rasional yang kuadratnya sama dengan π atau dengan kata lain **tidak ada bilangan rasional r** sedemikian hingga $r^2 = \pi$, artinya kemungkinan kecil keberhasilan untuk membuktikan bahwa π merupakan bilangan rasional atau tidak akan pernah terbukti meskipun menggunakan alat yang canggih..

Tetapi memang π selalu menarik karena telah memperdaya ahli matematika terhebat terpesona oleh simbol ini. Daya tarik ini bersifat universal dan telah ada selama hampir 4000 tahun. π benar-benar istimewa, sifat-sifatnya yang luar biasa dan kehadirannya dalam sains dan juga dalam kehidupan sehari-hari memberi π tempat special, dan penemuan matematika terbesar bahwa hari π tanggal 14 Maret (**Kurniawan, 10 Maret 2021**)

8. *Shine on you crazy diamond* (bersinar pada anda berlian gila)

Ketika kegelapan kata-kata membelenggu sikapku yang kekanakan dan bloon

Padahal belajar seharusnya membentang seluas horizon

Haruskah aku mundur kembali Melepasmu melesat bagai ilusi

Pengetahuan menjadi dasar dalam berpikir untuk membuat generalisasi dalam mendapatkan kesimpulan ilmiah yang relative. Kekomplekan kehidupan manusia dan alam semesta menjadikan pengetahuan dan ilmu mengenai obyek yang ingin kita ketahui merupakan abstraksi yang disederhanakan. Oleh karena itu, kita harus banyak belajar dan berpikir, karena akal/pikiran merupakan satu-satunya cara untuk memperoleh ilmu pengetahuan yang benar. Francis Bacon mengatakan; "**Pengetahuan adalah Kekuasaan**" Ungkapan itu bermaksud menjelaskan bahwa Ilmu pada dasarnya bersifat netral, yang tidak memihak pada kebaikan

atau keburukan, Manusia yang menguasai ilmu yang menentukan kegunaannya sebagai kekuasaan untuk mewujudkan kesejahteraan atau menghancurkan kehidupan yang indah ini. Ketika kita sudah memperoleh ilmu/pengetahuan, kita tidak boleh melepaskannya atau melupakannya, melainkan harus dikembangkan dan didiskusikan dengan orang lain serta terus berfilsafat. Jika kita banyak berpikir dan menemukan kebenaran yang menghasilkan ilmu yang bermanfaat, maka kehidupan kita akan bersinar. Sebaliknya, jika ilmu pengetahuan tidak dijaga dan tidak diamankan, maka dia akan melesat pergi bagai unta yang lepas dari ikatannya. (Hadits Shahih).

Cinta yang dikejar dan dirindukan adalah cintanya orang yang ber-ilmu pengetahuan, karena dengannya kita bisa mendiskusikan banyak hal, dan orang yang ber-ilmu pengetahuan selalu gigih tidak pernah putus asa dalam menghadapi masalah. Dia selalu memikirkan sesuatu yang menjadi masalah dan selalu berharap akan kepastian pemecahan masalah.

D.3. RECAPITULATION OF ASSESSMENT

D.3.1. Validate Test Item

The test for the end of semester evaluation consists of questions in the form of essays which have been analyzed by the lecturer in the Philosophy of Mathematics Education. The essay question is validated by paying attention to several aspects, namely the suitability of the problem with indicators, language, content and construct.

D.3.2. Evaluation Results of Philosophy of Mathematics Education for DPME Class 2018A
