

An Omaha Insulation Contractor Can Help You Choose the Right Insulation Solution For Your Home Or Business

Insulation is a great way to make your Omaha home or business more energy efficient. It helps prevent moisture from leaking into your building and allows you to control temperature differences between conditioned and unconditioned spaces. It also provides acoustic benefits and can increase fire resistance. Nebraska Building Products offers a wide variety of insulation solutions to improve the energy efficiency and comfort in homes and businesses throughout Omaha.

Blown-in Fiberglass Insulation

One of the most common types of insulation that is installed in homes and buildings across Omaha is fiberglass blown-in insulation, or blowing wool. This type of loose-fill insulation has a flexible R-value that can be varied as needed during installation and is effective at filling gaps, cracks, and crevices. It does not settle once it is in place and can be used for a variety of applications including attics, mid-floors, and netted wall cavities.

Spray Foam Insulation

Another popular type of insulation that is available in Omaha is spray foam, which is an environmentally friendly product. This product is made from a mixture of isocyanate and polyol resin that expands up to 30-60 times its initial volume, picks up space, and molds to fit into voids. This type of insulation is a great way to fill nooks and crannies, seal around pipes, windows, doors, and other areas of your home or business, and is an effective air barrier that reduces your energy bills by up to 40%.

Ceiling Insulation

Installing insulation in the ceilings of homes and businesses throughout Omaha is a great way to improve energy efficiency, acoustic control, and general comfort. It can also provide fire resistance and help prevent moisture from entering the structure.

Floor Insulation

In addition to installing insulation in the walls of your home or business, Nebraska Building Products also installs floor insulation in many types of buildings throughout Omaha. This is especially helpful in floors that are above cold spaces like crawl spaces and garages as well as in slab floors that are built directly on the ground.

When it comes to choosing the right kind of insulation for your home or business, you need to consult with an experienced [Omaha insulation contractor](#) who can recommend the best products for your needs and help you select the appropriate amount of insulation for your building. They can also remove old insulation materials and replace them with new ones that

are more energy efficient and environmentally friendly.
