Debug Tag is an exciting locomotion-based game where players control gorillas in a dynamic, immersive environment. The gameplay centers on exploration, climbing, and interaction with friends. As a gorilla, players must use their arms to climb walls, trees, and other structures, making movement feel natural and engaging. The game emphasizes physicality and creativity, allowing players to scale high cliffs or swing through jungle-like landscapes. In addition to exploring the environment, players can engage in playful activities with friends, such as tag or mini-games, making it a fun social experience. The immersive climbing mechanics and group interactions create an energetic and enjoyable atmosphere, ideal for players who love active movement and cooperative play.
