

REFRIGERATOR

In 1913 was invented the refrigerator for home but before there was more prototype the first prototype was invented in 1834, in 1854 was invented the first commercial ice-making machine.The history of the refrigerator is so long. For example, in 1755 William Cullen designed

the first refrigerating machine.
In 1805,American inventor **Oliver Evans** described a closed **vapor-compression refrigeration** cycle for the production of ice by ether under vacuum.In 1820,the British scientist **Micheal Faraday** liquefied **ammonia** and other gases by using high pressures and low temperature,and in 1834 an american expatriate in Great Britain,**Jacob Perkins**,built the first working vapor-compression refrigeration system .

TYPES OF REFRIGERATOR			compression refrigeration system was built by Ja Harrison, a Scottish Australian. His was for a vapor compression system using ether,alcohol or ammonia.
● Side-by-Side Refrigerator ● French Door Style Refrigerator ● Stacked Refrigerator and Freezer ● Compressor Refrigerator ● bAbsorption Refrigerator
