Title	Bounce egg and spoon race
Question What will happen when...	What will happen when we make the eggs and they don't bounce or burst open
Materials	White vinegar, Food dye, 12 eggs, 1 box of favorites, large bowl,
Prediction (Hypothesis) I think that...	I think that when we grab the hard boiled egg and pour the vinegar on top of the eggs it will start losing its shell
Procedure (Method) What we will do.	We will put a hard boiled egg in a large bowl then we will pour about a cup of vinegar over the egg. Then we will put a few drops of colour into the bowl we have to wait three day until they should be ready then we have to run the eggs under water and get all the remaining shell of the egg and that is how you make a bouncy egg
Observations What I see happening	
Conclusion (Explanation) Why it happened.
