Measurement techniques :

We've downloaded respective CPO apps on multiple phones. We look for the status on the app on a regular basis and this data gets fed into our internal database. This data is cleaned, processed and then presented for visualizations.

Non working connectors :

We collect the data upto three times per CPO. If a connector is found offline for all the passes, then the connector is marked as offline.

Collection :

We've significantly enhanced our manual data collection processes, supported by our growing team and streamlined workflows. We are expanding our team and seeking individuals to assist with data entry tasks. If you're interested, please fill out [this form](#).

Hygiene :

We improved data hygiene by checking each CPO app three times. The latest data for all CPOs was collected in September 2025. Our data refinement process identified private, restricted, or captive chargers, and effectively purged them from the database. The rise of aggregator platforms has forced us to be more diligent while collecting the data and avoid duplication!

How do I use it :

EVInfraBI is hosted on PowerBI. If your company already uses Microsoft products like Teams and Outlook, then it is highly likely that you have access to PowerBI. If not, we will provide access to you, on our costs.

We are happy to train your team to use PowerBI for our products.

Purchase options :

Please reach out to me if you need access to historical data or upcoming data.

Disclaimers :

The data in EVInfraBI is static.

While we've taken great care to ensure data accuracy, we recommend verifying the information independently before making decisions. If you notice any discrepancies, please contact us at priyans@expwithevs.in.

Disclosures :

[2023] - I had conducted a 3rd party audit of Glida's charging network and was paid for it.

[2023] - Charge Mod, EVOK, TataEV, Ador Digatron have paid for my travel to attend their events.

Other terms and conditions :

There may be minor changes in the article being presented and the final report being shared for both products.
