

1. Pick a new formula not taught in class.
2. Create a scenario that realistically demonstrates that formula (Use Mockaroo.com to generate realistic data like name, money, address, email, etc.) using 100 rows of data.
3. Repeat 2 more times, for a total of THREE new formulas you've learned and demonstrated.

HINTS:

- 1) These can be in 3 spreadsheets, or all in 1 spreadsheet.
- 2) Google "Excel Formulas". Look at the ExcelJet.com result. It gives examples with links on how to do it.
