

Space Travel

Many years ago, air travel was rare. Very few people flew. Tickets were expensive. However, service was very good. Seats were large. On long flights, good food was served. Today, air travel is common. However, many people don't like flying. They say that service now is worse than a few years ago.

Over the years, billions of dollars have been spent to explore space. Some people think that more exploration is needed, while others disagree. Recently, the budget for NASA was greatly reduced. In your opinion, should more money be spent on space exploration?

Humans may never reach Mars, but our presence is already being felt on the Red

Planet. Human proxies, in the form of rovers like Opportunity and Curiosity, probe and pry over landscapes that have been selected by scientists for their accessibility and scientific potential. The Holy Grail would be for one of these wandering robots to detect indisputable signs of life.
