

Create Your Own Invention

Due Wednesday, May 1

You are scientists/inventors and your mission is to create an invention that you think will help people, animals, and/or the environment. Your invention should help solve a problem and/or make a task easier for someone or something. Be as creative as you can!

Directions

Create a model of your invention. The model can be drawn on a piece of paper or you can choose to build your model. The model does not need to work, but should be realistic.

In addition to creating a model, you must include a **2-3 paragraph paper** that answers the following questions:

1. What does your invention do? How does it work?
2. How does your invention benefit people, animals, and/or the environment?
3. What is your favorite thing about the project?
4. What is the most challenging thing about this project?
5. How could you improve your project?

Please be prepared to present your invention to the class.
