 - c. Be sure to run yum update or apt-get update; apt-get dist-upgrade after installing 8.8.6; there are updates in the repo already.
 - d. Question: When migrating to a brand-new Network Edition Target server, does one install the Zextras Migration Tool (zextras_migration_tool-2.4.12.tgz) or the full Zextras Suite on the Source (old) server? Doesn't the latter require a license?
 - https://wiki.zimbra.com/wiki/Zimbra_NG_Modules/Zimbra_NG_Backup/zxbackup-migration says to "wget http://www.zextras.com/download/zextras_suite-latest.tgz"
 - On a Zimbra 7.2.7 test server I ran "wget http://download.zextras.com/zextras_suite-legacy.tgz" and it installed without prompting me for a license key.
 - e. Mobile sync issues using zextras/NG - you'll want to check out the 'zxsuite mobile doAddAccountLogger' command to identify message that might be hanging up sync.

 - Still working on it. Maybe update next week.
- d. [John W] Issues with Outlook 2016 and ZCO?
 - [Noah] ZCO needs a registry change to show the selection for ZCO for latest 2016 as far as I know.
 - [Bobby] Update hopefully coming soon to address install issues
- e. [Guy] How do you manage SMTP enforce :
https://wiki.zimbra.com/wiki/Enforcing_a_match_between_FROM_address_and_sasl_username_8.5
 - When you want to add an existing zimbraAddress . When you want to add an existing zimbraAddress
 - When you want to add an existing zimbraAddress
- f. **Fail2Ban discussion**
 - robert heckathorne
 1. mark have you tried something like this: 1. add custom syslog info in log4j.properties on mailbox server to send security logs to syslog, 2. configure syslog.conf to send that custom log to syslog on the proxy, 3. use that log on the proxy for fail2ban
 - Mark Stone
 1. Thanks Bobby; you are right on that getting the actionable logs to the proxy server would enable fail2ban to work on the proxy server. I think leveraging log4j on all of the mailbox servers might so the trick!
 - robert heckathorne
 1. add SYSLOG to this line:
 2. log4j.logger.zimbra.security=INFO,AUDIT,SYSLOG
 - Mark Stone
 1. File a bug report John; I'd vote for it!
 - robert heckathorne
 1. And maybe adjust this facility name as desired:
 - robert heckathorne
 - a. log4j.appender.SYSLOG.Facility=LOCAL0
 - Guy Carré
 1. Add a new syslog appender
 log4j.appender.RAUDIT=org.apache.log4j.net.SyslogAppender
 log4j.appender.RAUDIT.SyslogHost=proxy-zimbra.domain.tld
 log4j.appender.RAUDIT.Facility=LOCAL2
 log4j.appender.RAUDIT.layout=com.zimbra.common.util.ZimbraPatternLayout
 log4j.appender.RAUDIT.layout.ConversionPattern=%-5p [%t] [%z] %c{1} - %m%n
 1. log4j.logger.zimbra.security=INFO,AUDIT,RAUDIT
