INTRODUCTION

Welcome to the RS-8871 Testing Handbook. This handbook goes over Testing Restrictions, Regulations, and general information in regards to Site-Alpha's Fresh crawler. This handbook also aims to educate you on RS-8871 in itself, and further provide information about it.

CHARACTERISTICS

As of now, RS-8871 is highly hostile against any personnel, attacking on sight even without being provoked. The creature is heavily scared of flames, making them a useful tool when fighting against it. Other effective counters include bright light (either from SCP-1200-15 or multiple flashlights) and pepper sprays, therefore all attending personnel of the test are advised to have these items on their person.

RS-8871 is an effective hunter, lurking from dark and badly visible spots, waiting for its chance to ambush any individual or group it comes into contact with. In the case your testing group is attacked by the creature, the C9 unit will try to scare it away with a flamethrower, yet all present personnel should activate their flashlights (If equipped with them) to help the scarring process.

TESTING RESTRICTIONS

The current Testing Restrictions for RS-8871:

- RS-8871 is restricted to **Researcher+**;
- RS-8871 events require **Senior Researcher+** authorization;
- RS-8871 events require a mandatory **Crimson-9** escort;
 - These escorts are required for overall security of the testing group and have authority over the entire event to their judgement;
- Spectators must uphold a clearance of **SC-2+**, spectator limit is lowered to 3 people, excluding the host;
- Shooting in the cave system should be kept to a minimum
 - It will lure RS-8871 to your location, get to a tactical position for ambush where it awaits until the group proceeds to attack them;
- An **Actor Organizer+** is required to act as RS-8871;
- When dealing with RS-8871, a pepper spray is preferred to be equipped, to be utilized in self-defense. The pepper spray may be bought from the vendor;
- Every RS-8871 related event is to be scheduled at least 1 hour ahead in the #event_schedule channel.

CONTAINMENT PROCEDURES

Like all Research-Subjects, RS-8871 does not have a containment chamber, but rather a unique domain in which it remains. This domain would be the whole cave system. It is, mostly, seen staying above Phi, and grabbing any unfortunate personnel who cannot protect themselves. However, his constant presence does not warrant Red Heron, and only Yellow Ember will be turned on for events alike.

TESTING PROCEDURES

In regards to testing procedures, aside from formalities, like getting a rationale and the necessary personnel, multiple precautions must be taken in order to avoid incidents.

- A drone will be required to locate RS-8871 within the caves. It is important to note how Jeffery may be aggressive towards these drones.
- The Class-Ds must be briefed outside of the cave system, to avoid unexpected attacks.
- A way to defend against RS-8871, is preferred. (eg. Flashlights, pepper spray, etc.)
- The Crimson-9 present, required to have a flamethrower equipped, to protect your test from an incoming attack.
- Tests with high risk may utilize SCP-1048-F as a guaranteed way to defend against RS-8871. This goes without saying, but Magma should be rewarded afterwards.
- Move within the caves alongside your Crimson-9 escort, and coordinate moves with them, to be safe within the caves.
- Preferably, luring him within an open space within the caves would be the best course of action, through the usage of firearms.

EXIGENT SITUATIONS

- When RS-8871 is roaming within tunnels, it is advised to remain in areas where he is unable to grab you, preferably an inside area.
- When he is sighted, authorization for the usage of Pepper Spray, and Flashlight, from the vendor, are authorized, to be bought and utilized efficiently from the vendor.
- If he grabs you, he will immediately drop you off the moment you utilize those on him.
- In this an exigent situation, Comson's operatives that are present should handle the situation appropriately.

CONCLUSION

This concludes the RS-8871 Testing Handbook. Any questions are to be directed to ScD Command or asked in the #g_and_a channel. Anything that seems to be outdated/additional information is to be contacted to the people below.
