Changing user settings for the form

Changing what happens after a form is submitted

Choosing where form data is saved

Sending the form out to users

Viewing responses to your form

Viewing a summary of responses as charts and graphs

Getting notified when a form is submitted

#### What is Google Forms?

Google Forms is a free tool from Google that allows you to do the following:

- Create forms, surveys, guizzes, and such
- Share the forms with others
- Allow others to complete the forms online
- Collect all the responses in a spreadsheet
- Provide you with helpful summaries of the collected data with charts and graphs

You access Google Forms through the Google Drive screen or the Google Forms web app.

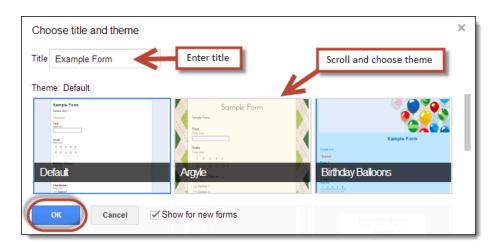

You can use Google Forms with your **personal Google account**, or through a **Google Apps for Education account**. With a Google Apps for Education account you can also do the following:

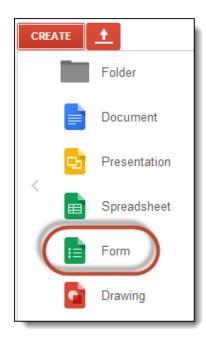

- Require that respondents be from your Google Apps domain.
- Collect respondents usernames.

#### Creating a new form

Once you are in Google Drive you can **create a new form** as follows:

- 1. Click the Create button in the top left corner
- 2. Then click **Form** from the drop-down menu
- 3. Your blank form will now be created and the **Choose title and theme** window will pop up.
- 4. To name your form, type in the **Title** box where is currently reads **Untitled form**. You can always change this later.
- 5. If you want to choose a **theme** for your form, scroll down through the available themes and click on the one you wish to use. You can change this later as well.
- 6. Finally click **OK** when done.

# Adding collaborators to the form

Just like with other Google Documents, you can give other people edit rights to collaborate on the creation of your form. To add collaborators:

- 1. From the edit mode of the form click **File** in the top menu bar.
- 2. Then click Add collaborators...
- 3. The normal **Sharing settings** window will open where you can share the form with other people.

# **Editing the form description**

After creating your form, you can optionally add text for a description. Usually this is where you can explain to the user the purpose of the form, any special directions, or other helpful information.

- 1. Below the title of the form, there is a box labeled Form Description.
- 2. Simply click and type in that box to add your description.
- 3. Note: you can include web addresses in the description box and they will show as clickable links on the live form.

#### **Editing form questions**

When you create your form, your first question will be created as well. You can edit the question as follows:

- For **Question Title** you can type in the question you wish to ask.
- For **Help Text** you can add additional directions or clarification for the question.
- For **Question Type** you can choose between nine different types of questions (explained later).
- If the question type needs a list of answers (such as multiple choice or checkboxes) then you can fill in the available answers.
- To force the user to answer the question, check the **Required question** box.
- Click **Done** when finished.

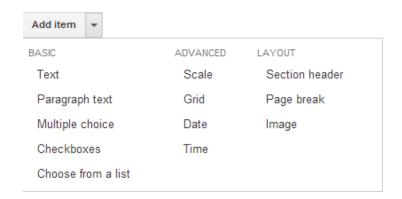

At any time you can also do the following to a question:

- You can edit a question by clicking the edit button (the pencil icon) in the top right corner.
- You can duplicate a question by clicking the duplicate button (the double-page icon) in the top right corner.
- You can delete a question by clicking the delete button (the trash can icon) in the top right corner.
- You can change the order of questions by clicking and dragging a question to a new location.

#### Adding more questions and other items

In addition to the one question you begin with, you can add more questions and other items to your form.

- To add an item you can click the Add item button below your last question, or click Insert in the top menu bar.
- The items you are able to add include:
  - Basic question types: Text, Paragraph text, Multiple choice, Checkboxes, Choose from a list
  - Advanced question types: Scale, Grid, Date, Time
  - Layout items: Section header, Page break, Image

#### **Question types**

There are **nine different types of questions** you can include in a form:

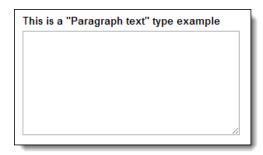

#### 1 - Text type

• For the **Text** type question, you simply type in a question and the user gets a **one-line text box** to enter their response.

#### 2 -Paragraph type

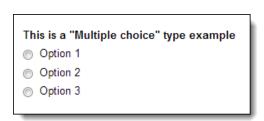

- For the **Paragraph** type question, you simply type in a question and the user gets a **multi-line text box** for their response.
- This type of question is well suited for open-ended or essay type responses.

#### 3 - Multiple Choice type

- For the **Multiple Choice** type question, type in your question.
- Then enter in as many options as you wish for the answer choices. You can also **copy and paste** in your list if you have it typed up elsewhere.
- You can also choose to add the Other option where the user will be allowed to add and choose a write-in choice for your list.
- When the user completes the question, they may only choose one of the choices you have provided

# 4 - Checkboxes type

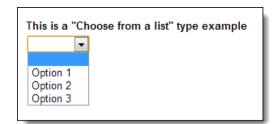

- For the **Checkbox** type question, type in your question.
- Then enter in as many options as you wish for the answer choices.
   You can also copy and paste in your list if you have it typed up elsewhere.
- You can also choose to add the **Other** option where the user will be allowed to add and choose a write-in choice for your list.
- When the user completes the question, they can choose as many of the choices as they wish from what you have provided.

This is a "Checkboxes" type example
Option 1
Option 2
Option 3

#### 5 - Choose From a List type

- For the **Choose From a List** type question, type in your question.
- Then you can enter in as many options as you wish for the answer choices. You can also copy and paste in your list if you have it typed up elsewhere.
- **Note**: There is not an **Other** option like in the Multiple Choice and Checkbox types.
- When the user completes the question, they may only choose one of the choices you have provided from a drop-down list.

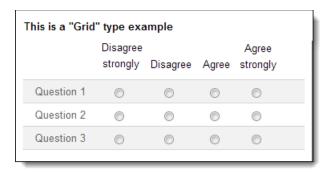

#### 6 - Scale type

- For the **Scale** type question, type in your question
- Then you enter the **starting point** (0 or 1) and the **ending point** (up to 10) for your scale
- Optionally you can enter labels for the endpoints of your scale such as "Disagree the most" and "Agree the most", or "Lowest ranking" and "Highest ranking"
- The user will be presented with a **scale of values** on which to place their response

# This is a "Scale" type example 1 2 3 4 5 Low High

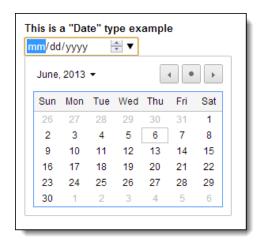

#### 7 - Grid type

- For the **Grid** type question, begin by typing in your overall question or directions that will apply to each question in the grid.
- Then choose how many columns you want in the grid (1 to 5), and you provide descriptive labels for each column
- Then enter as many **rows** as you wish for the grid, and enter a question or statement for each.
- When the user completes the question, they will be presented with a grid of rows and columns and will need to click a single cell to place their response for each row.

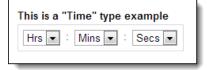

#### 8 - Date type

- For the **Date** type question the user will simply choose a date from a drop down box or with up/down arrows.
- You have the option to include the **Year** or not.
- You have the option to include the **Time** or not.

#### 9 - Time type

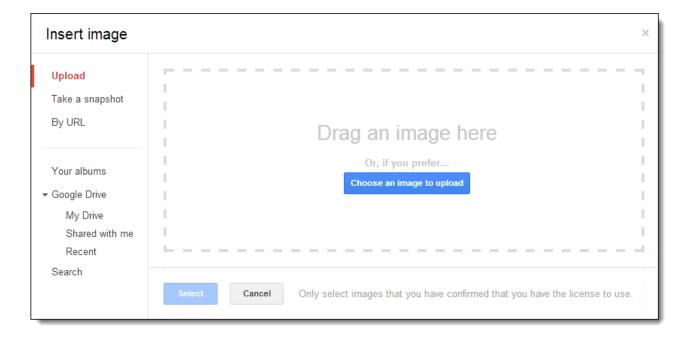

- For the Time type question you can choose either the time of day format or duration format with hours, minutes, and seconds.
- The user will then select the time or duration using drop down menus and up/down arrows.

#### **Inserting images**

You can also insert pictures in your form, and can place them before or after a question or other part of your form. This is especially useful for quizzes to show the user maps, charts, and other images related to the questions in the form.

- 1. To add a picture click the **Add Item** button or click **Insert** in the top menu bar.
- 2. Then choose **Image** from the drop-down menu.
- 3. The normal Google Docs Insert image window will open giving you many options for selecting the picture.

"Using Google Forms" - Eric Curts - Page 6 of 12

- Upload You can browse your hard drive or network drive to locate and upload an image.
- Take a snapshot If you have a webcam, you can take a picture and insert that.
- **By Url** You can paste the web address of an image that is already online.
- Your albums If you save pictures in Picasa Web Albums, you can browse through your albums and insert any image.
- Google Drive Select images saved to your Google Drive or shared with you from others through Drive.
- **Search** You can search for image from several online sources:
  - o Google A search of Google Images for public-domain pictures
  - o Life Pictures from Life Magazine
  - Stock Images These are high quality clipart images

**Note**: Once you insert an image into the form you can click and drag it to place it elsewhere in the form, just like you can do with form questions.

#### Adding section and page breaks

If your form has a lot of questions you may want to break it up with section breaks or page breaks, and provide additional structure and information to the user.

#### To add a **section brea**k:

- 1. First click the **Add Item** button or click **Insert** in the top menu bar.
- 2. Then choose **Section header** from the drop-down menu.
- 3. You can now enter in a section title in the **Header text** box.
- 4. Optionally you can type in more information in the **Description** box.
- 5. Click **Done** when finished.
- 6. Now you can **click and drag** the section header to whatever location in the form you want.

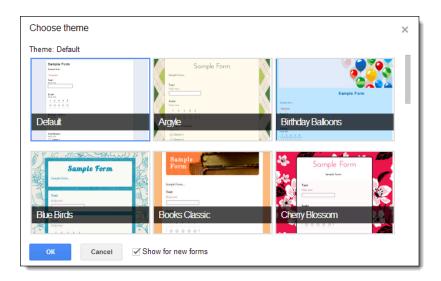

#### To add a page break:

- 1. First click the **Add Item** button or click **Insert** in the top menu bar.
- 2. Then choose **Page break** from the drop-down menu.
- 3. Optionally you can now enter in a page title in the Page title box.
- 4. Optionally you can type in more information in the **Description** box
- 5. Click **Done** when finished
- 6. Now you can **click and drag** the page break to whatever location in the form you want.
- 7. You can also determine where the user goes after a page break such as the **next page**, a **specific page**, or **form submission**.

# Changing the theme of the form

Google Forms offers a large variety of themes to choose from to modify the color and style of your form. To change your form's theme:

- First click on **Theme...** in the top menu bar.
- This will take you to a screen where you can scroll through available themes displayed as thumbnail images.
- 3. Click on the theme you want and click **OK**.
- 4. To view your form using the new theme, click **View live form** in the top menu bar.

## Changing user settings for the form

If you are using Google Forms through a Google Apps domain, there are several user settings that you can change for your Google Form. Each of these are controlled at the top of the form by selecting (or not) checkboxes.

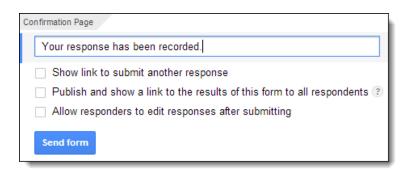

- Require [your domain] login to view this form If you check this box then people will need to log in with a valid Google Apps account from your domain (such as your school) to access and complete the form.
- Automatically collect respondent's [domain] username This checkbox will determine if the form is anonymous or not. If you need to know which user goes with which responses (such as students completing the form as a quiz) then check this box.

# Changing what happens after a form is submitted

At the bottom of the form is a section titled Confirmation Page where you can control what happens after a user submits the form. This includes the following:

- You can change the response message the user is given.
- You can give them a link to retake the form.
- You can give them a link to see all the results from other participants.
- You can give them a link to edit their responses.

## Choosing where form data is saved

Before you can have users actually fill out your form, you will need to do one last step, which is to choose where the user responses to the form will be stored. Most often you will want to save the data in a Google Spreadsheet for easy access and analysis.

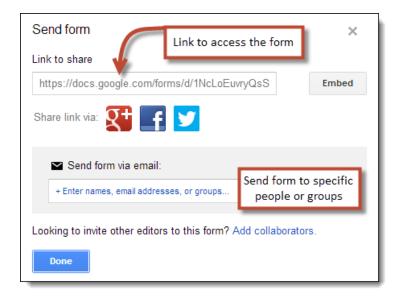

- 1. Begin by clicking **Choose Response Destination** in the top menu bar.
- In the New spreadsheet box you can rename the spreadsheet if you want, although the default name is usually fine since it incorporates the name of the associated form.
- Click the **Create** button to generate and link the spreadsheet to the form.

# Sending the form out to users

When your form is ready, you can make it available to users in several ways.

- First, click the **Send Form** button in the top right corner of the edit screen. This will open the Send form window.
- If you want to email the form directly to users, click in the box labeled Send form via email. Here you can enter individual email addresses or email distribution groups.

- Another option is to copy the form link from the **Link to share** box. You can then share that link with users in many ways:
  - Post the link on your website, blog, forum, or other online source.
  - Put the link inside another document and share that document (perhaps as a document with a whole list of links).
  - Turn the link into a QR Code
  - Use a URL shortener such as Tiny URL or Bitly

# Viewing responses to your form

Once people begin filling out your form, their responses will be saved to the spreadsheet linked to the form. You can get to the spreadsheet in a couple of ways.

• From the edit screen on the form, simply click the **View responses** button.

• Or from your **Google Drive** screen, simply locate and open the spreadsheet.

Once you have the spreadsheet open you will see all of the user responses, one user per row, with each column holding the data for each question in the form.

Just like with a regular spreadsheet you can perform many spreadsheet operations including sorting and filtering the data, creating charts, creating additional sheets, adding data and formulas to unused cells, and such.

#### Viewing a summary of responses as charts and graphs

Google Forms can show you a **summary of the responses** in graph and chart form. This can be helpful to identify trends "Using Google Forms" - Eric Curts - Page 10 of 12

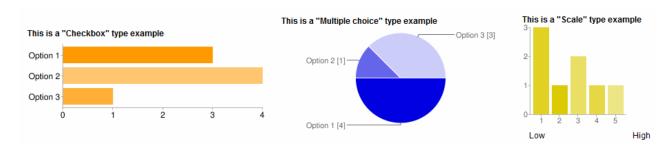

or easily determine overall opinions.

To see this summary do the following:

- If you have the form spreadsheet open, click Form and then Show summary of responses.
- If you are in the edit mode of the form, click Responses and then Summary of responses.

In **Summary view** you will see:

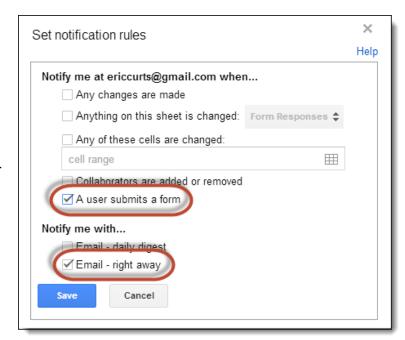

- Bar graphs showing the frequency of responses to Checkbox, Scale, and Grid questions
- Circle graphs showing percentages of responses to Multiple Choice questions
- Total numbers and percentages for each possible response
- The first several **responses** for any of the **Text** or **Paragraph** questions
- A line graph showing the amount of responses per day since you shared the form

#### Getting notified when a form is submitted

If you have a form that will be getting responses over a long period of time, you will want to be **notified when someone new submits** their responses. You can configure the form spreadsheet to send an email to you in such situations.

- 1. First open the **Spreadsheet** for the form.
- 2. Click **Tools** in the top menu bar
- 3. Choose **Notification rules...** from the drop-down menu
- 4. This will open a window where you can make the settings
- You should check the notify box for A user submits a form
- You should check the notify box for Email right away
- 7. Then click Save
- You will now get sent and email anytime someone completes your form (along with a convenient link to the form spreadsheet of responses)
