

Pre-check

1. [✓] Confirm access to database from edamame
2. [✓] SPF / email sending test
3. [✓] TTL on DNS ([PR #108](#))
4. Access to LDAP (SSL to ldap.jenkins-ci.org seems to fail host name verification) (bit suspicious but it should be OK)

Day of migration

1. [✓] Disable puppet run on eggplant by manually by adding "exit 0" at /root/infra-puppet/run.sh
2. [✓] Switch http://issues.jenkins-ci.org/ to maintenance by having /etc/apache2/sites-enabled/issues.jenkins-ci.org to /etc/apache2/sites-available/issues.jenkins-ci.org.maintenance. This blocks traffic from getting to JIRA
3. [✓] Verify from my local browser that http://issues.jenkins-ci.org/ is showing maintenance screen
4. [✓] Shutdown JIRA, kill -9 if need be.
5. [✓] Take full backup of JIRA DB dump & home
6. [✓] Disable puppet agent on edamame by "puppet agent --disable"
7. [✓] Stop all docker container services on edamame (jiradb, jira)
8. [✓] Wipe out /srv/jira/home on edamame
9. [✓] rsync /srv/jira/home from eggplant to edamame.
10. [✓] adjust file permissions on edamame's new jira home (chown -R jira:jira /srv/jira/home)
11. [✓] merge [PR #110](#) to production. This change shuts down temporary mariadb for testing, and switch JIRA to talk to the production DB
12. [✓] Re-enable puppet agent on edamame by "puppet agent --enable"
13. [✓] Manually run "puppet agent -t" on edamame to get JIRA going
14. [✓] Manually sanity check JIRA on edamame by using browser and looking around, making edits
 - [✓] login
 - [✓] file issue
 - [✓] email notification
 - [✓] search issue
 - [✓] attachment
15. [✓] "service docker-jira restart" on lettuce and make sure it comes back up all right
16. [✓] merge [PR #109](#) to make edamame production.
17. [✓] "puppet agent -t" manually on edamame and spinach to speed up the propagation of DNS change
18. [✓] merge [PR #72](#) to make sure eggplant won't run JIRA.

19. [✓] Enable puppet run on eggplant by removing “exit 0” at the top. run /root/infra-puppet/run.sh immediately and manually inspect the result. In particular, make sure JIRA won't run on eggplant.
20. [✓] Update datadog dashboard so that it picks up metrics from edamame. tweak monitoring.

Post migration action

- Ask OSUOSL to give a bigger disk space on edamame
