

Issue 6 - Thursday, April 17, 2025

This week, I am highlighting a **brilliant AI-powered tool** that can save you time and take your learning materials to the next level. If you are creating **Knowledge Organisers** for your students, **Canva Magic Write** is an absolute game-changer.

There are so many fantastic digital tools available to support teaching and learning. Whether you are **teaching, supporting small groups, running extracurricular activities, or working with individual students**, this tool will help you create **engaging, clear, and highly effective revision resources**.

★ [Create Knowledge Organisers with Canva Magic Write](#)

Canva Magic Write is a **powerful AI tool** built into Canva's Docs feature, enabling teachers to **quickly generate high-quality written content**, including knowledge organisers. With just a few prompts, educators can draft **structured summaries of key concepts, vocabulary, and visual elements** that make learning clearer, more accessible, and easier to revise.

Why Use Magic Write for Knowledge Organisers?

Magic Write streamlines the process of creating **well-organised learning resources**. Teachers can enter a simple topic prompt (e.g. "*Photosynthesis summary for Year 8*") and instantly receive **editable, curriculum-friendly content**. From there, it is easy to format the organiser using Canva's drag-and-drop tools, adding **headings, icons, timelines, diagrams, or even colour-coded sections** to support visual learning.

Key Benefits:

- ✓ **Saves time** – Quickly generate written content and focus more on design and personalisation.
- ✓ **Supports differentiation** – Adjust the AI's output to suit different year groups or ability levels.
- ✓ **Enhances visual clarity** – Combine Magic Write summaries with Canva's design features to create engaging, printable or digital organisers.
- ✓ **Improves revision** – Clear, concise overviews help students retain and recall essential information more effectively.

How to Use It:

1. Open a new **Canva Doc** and launch **Magic Write**.
2. Type in your prompt (e.g. "Key points about the water cycle for Year 6").
3. Review and edit the AI-generated text.
4. Convert your content into a visual knowledge organiser using Canva's templates, shapes, and icons.
5. Download, print, or share it with students digitally!

 **Watch a Quick Demo:** [How to Create a Knowledge Organiser Using Canva Magic Write](#)
This short video shows how easy it is to bring your organiser to life with Canva.

[Here is an example that I made about Rainforests. This can be easily edited using the Canva AI tool and pictures can also be added.](#) It is easier to edit and add photos if you copy and paste the text into a Canva Poster.

This tool is **free, time-saving, and highly effective** for helping students engage with learning content more visually and independently. If you give it a go, I would love to hear how you have used it with your students!

Many thanks,
Adam
