

How to make your insect killing jar

You will need:

1. A glass jar with a tight fitting lid
2. A cardboard circle
3. Cotton balls or an absorbent piece of rag
4. Nail polish remover

Put the cotton balls or rag in the bottom of the jar.

Pour nail polish remover on them till they are soaked, but you don't want a puddle on the bottom.

Put the cardboard circle on top of the soaked cotton balls.

Screw on the lid.

It is ready to kill insects. Make sure you leave them in the jar long enough, and only kill one insect at a time. When it is dead, you can remove it to another container until you are ready to pin it.
