

Serial Monitor

Use the Serial Monitor to debug. Add `Serial.print` statements to check where the code might be failing:

```
C++
void setup() {
  Serial.begin(115200);
  delay(1000);
  M5.begin();
  if (!SD.begin()) {
    Serial.println("SD Card initialization failed!");
    return;
  }
  Serial.println("SD Card initialized.");
  // Rest of your setup code...
}
```
