Abstract

A concise and factual abstract is required and must be **written in Bahasa and English** (maximum length of 100-250 words). The abstract **should state briefly the purpose of the research, the methods used, the principal results and major conclusions**. Please try to keep each sentence as specific as possible and avoid such general statements as "The management implications of the results are discussed". An abstract is often presented separately from the article, so it must be able to stand alone. For this reason, References should be avoided, but if essential, they must be cited in full, without reference to the reference list. Also, non-standard or uncommon abbreviations should be avoided, but if essential they must be defined at their first mention in the abstract itself.

Keywords:

Provide a **maximum of 5 keywords**, using American spelling and avoiding general and plural terms and multiple concepts (*avoid, for example, 'and', 'of'*). Be sparing with abbreviations: only abbreviations firmly established in the field may be eligible. These keywords will be used for indexing purposes.

Introduction

This is a template. Author(s) should use this template to format their manuscript before submission [1]. These guidelines include complete descriptions of the fonts, spacing, and

related information for producing your manuscripts [2]. All manuscripts must be in English or Bahasa. If you have any questions, please email the editor. Thanks.

Introduction a provides the background information, previous references related to the main topic, reason, purpose of the research, and the novelty of research. This is the essential part for the readers who are not familiar with the topic. Adapted references in INTRODUCTION are minimal 2010-2023 [3], except in taxonomy study.

This template provides authors with most of the formatting specifications needed for preparing electronic versions of their papers. All standard paper components have been specified for four reasons: 1) ease of use when formatting individual papers; 2) automatic compliance to electronic requirements that facilitate the concurrent or later production of electronic products; 3) conformity of style throughout the journal; and 4) more importantly, speed up the entire publication process [4]. This live template is formatted using A4 size paper, with margins of 2.5 cm. (top, bottom, left, and right). Margins, column widths, line spacing, and type styles are built-in; examples of the type styles are provided throughout this document and are identified within parentheses, following the example. PLEASE DO NOT RE-ADJUST THESE FONTS SIZES AND MARGINS.

Materials and methods

Materials

Provide sufficient detail to allow the work to be reproduced. Methods already published should be indicated by a reference: only relevant modifications should be described.

Methods

Manuscript is divided using the numbered sections. Authors should divide the manuscript into clearly defined and numbered sections. Second level section numbering is done automatically; following the upper level's number. Use this numbering also for internal cross-referencing: do not just refer to the text. Any subsection should be given a brief heading[3]. We do not encourage additional sub-levels after the third level [2]. Please try to make your paper concise and clear.

Results and Discussion

Results should be clear and concise. The discussion should explore the significance of the results of the work. Data discussed by comparing the data obtained with the previous data, clarifying arguments against the results obtained in accordance with the research objectives,

and explaining the similarities and differences as well as demonstrate the uniqueness of the invention [5], [1]. Avoid extensive citations and discussion of published literature. If appropriate, Results can be written in a separate section from Discussion. This especially if the Discussion is extensive and includes all the Results of the study.

1. Table

Please submit tables as editable text and not as images. Tables use 12pt Times New Roman fonts.

Table 1. Use Times New Roman 12 font

Sample	Total phenolic and flavonoid content of <i>M. oleifera</i> aqueous extract	
	Total phenolic content (μg Gallic acid ml^{-1})	Total flavonoid content (μg Catechin ml^{-1})
Leaves	44.9 ± 0.37	4.9 ± 0.37
Twigs	22.3 ± 0.94	522.3 ± 0.94
The bark of	13.7 ± 0.02	3.7 ± 0.02
Woody vascular	6.1 ± 0.19	3.1 ± 0.19

Number tables consecutively in accordance with their appearance in the text and place any table notes below the table body. Be sparing in the use of tables and ensure that the data presented in them do not duplicate results described elsewhere in the article. Please avoid using vertical rules.

2. Figures

Figure 1. Synthesis MgO nanoparticles process (a) Moringa extract sample; (b) addition of NaOH; (c) aging process;.

3. Graphs

Graphs must be supplied in figure formats. The fonts of the graph must be clear and readable. Black and white graphs are preferred.

4. Citation

Please ensure that **every reference cited in the text is also present in the reference list** (and vice versa). Any references cited in the abstract must be given in full. Unpublished results and personal communications are not recommended in the reference list, but may be mentioned in the text [6]. If these references are included in the reference list they should follow the standard reference style of the journal and should include a substitution of the publication date with either '*Unpublished results*' or '*Personal communication*'. Citation of a reference as 'in press' implies that the item has been accepted for publication. **All manuscripts should be formatted using the IEEE (*Institute of Electrical and Electronics Engineers*).** IEEE citation style file for reference manager (**Mendeley, Zotero**, etc.).

Conclusions

A conclusion is not merely a summary of your research result or a re-statement of your research problem but **a synthesis of key points, an answer to the research objective. Only in one paragraph, without numbering and bullets.** Suggestion should be based on the research findings and refer for the future research.

Acknowledgments (if any)

Address appreciations to people who play the main role in the research, such as the research sponsor and those who assist the research process (institution or individual). Provide information about funding by including **specific grant numbers and titles.**

Conflict of Interest

The authors declare no conflict of interest.

Author Contributions

(In absence of specific instructions and in research fields where it is possible to describe discrete efforts, the Publisher recommends authors to include contribution statements in the work that specifies the contribution of every author in order to promote transparency. These contributions should be listed at the separate title page).

Declaration of Generative Ai

Not applicable.
