## Glo Dollar: updated model (WIP - go live April)

Glo Dollar (ticker: USDGLO) is the stablecoin that funds public goods.

Stablecoin companies generate up to \$8 billion annually from their stablecoin reserves. Our approach is different—we funnel all our profits to charitable causes. By adopting Glo Dollar, you're funding public goods.

Glo Dollar allows you, the holder, to choose which causes to support. That includes poverty alleviation, Web3 Open Source, decarbonization programs, and public health initiatives. At zero cost to you. We'll refer to this as AutoPGF (Automatic Public Goods Funding).

Our partners are integrating philanthropy with Glo in various ways. Gitcoin and Polygon Labs have added Glo Dollars to their treasuries. Some partners pay salaries in Glo Dollars, or use Glo Dollar credit cards for business expenses.

Glo Dollar is 100% fiat-backed, always redeemable 1:1 for USD and USDC, and is issued and regulated in the United States. Independent attestations are conducted monthly on Glo Dollar reserves.

Available across 7 blockchains including Ethereum, Polygon PoS, Optimism, Arbitrum, Celo, Stellar, and Base, Glo Dollar is developed by the Glo Foundation and issued by our partner Brale.
