

## Should you replace your high-bays or retrofit?

Have you already made the decision to convert that warehouse or factory lighting to LED? With energy savings of as much as 70% from replacing metal halide high bays that decision is a no-brainer.

The next logical question to ask yourself is *should I buy new fixtures, or should I retrofit existing ones?* In this blog we'll weigh the options to help you come to the best decision for your environment.

How many lumens do I need?

To determine the needed lumens, you will need to multiply your room square footage by your room foot-candle requirement. For example, a 100 square foot living room, which needs 10-20 foot-candles, will need 1,000-2,000 lumens. A 100 square foot dining room, which needs 30-40 foot-candles, will need 3,000-4,000 lumens.

YOUR GUIDE TO ENERGY EFFICIENT LED LIGHTING

<https://www.myledlightingguide.com/led-high-bay-lights>

<https://sites.google.com/site/bestledlightingguide/high-bay-led-lights>

## Total cost

First let's consider what's about the same. Energy savings between new and retrofit are the same. Rebates for new fixtures tend to be higher than for the retrofits. New LED high-bays have come down in price in recent years while the efficiency has gone up. So, the difference in price between new or retrofit is negligible.

Really, the most important costs to consider are the installation costs. The time it takes your electrician(s) to install will likely be the biggest difference in the total cost of the project. That's why ease of installation is an important aspect.

# MY LED LIGHTING GUIDE

<https://sites.google.com/site/bestledlightingguide/high-bay-led-lights>

## **Ease of installation**

Unlike outdoor parking lot fixtures, new high-bay fixtures typically take one person to install, it's nearly as simple as removing the old fixture and completely replacing it with the new one. Whereas a retrofit high-bay may take two people because you must remove the ballast and the time that it takes to physically perform the work can be 2-3 times longer than a new replacement. Multiply that by the number of fixtures and you may have a significant difference in cost.

So, if ease of installation is your primary concern, choose new LED high-bays.

**White UFO LED - replace 400W HID**

## **Reliability**

New high-bays or retrofits from MyLEDLightingGuide provide reliable light. They all come with at least 5-year warranties. They use the same, reliable drivers – Mean Well, Inventronics, or Philips.

So, where do the reliability differences begin? They are mostly in the existing fixture.

Evaluate the condition of the current fixtures. Are the lenses yellow? Is there rust? How durable are they? If their condition is not good enough to last another 5-10 years, then consider buying new. The new high bay fixtures MyLEDLightingGuide offers are rugged but compact. They have an epoxy coating to make them tougher. They don't need reflectors and you have choices in optics and features.

## MY LED LIGHTING GUIDE

YOUR GUIDE TO ENERGY EFFICIENT LED LIGHTING

<https://www.myledlightingguide.com/led-high-bay-lights>  
<https://sites.google.com/site/bestledlightingguide/high-bay-led-lights>

If your current fixtures have a custom design and they are in good condition, or you just like the look of them better than the new available options, then retrofitting may be a good choice for you.

Overall, when we consider the total cost, ease of installation, and reliability, purchasing new LED high bays is the better option.
