This is the MAIN MANUSCRIPT BODY with information on how to use the Template.

The template details the sections that can be used in a manuscript. Note that each section has a corresponding style and guidelines. **Kindly remove this paragraph and ALL the COMMENT notes before submitting.** For any questions, please contact the World Nutrition Editorial Office by email: support@worldnutritionjournal.org

Article Type: *eg: Research* [Times New Roman, Font size 12 for the manuscript text; 14 for the main headings]

The main title of the article

ABSTRACT (*should not exceed 300 words*)

A structured abstract of about 300 words maximum. Ideally, it will provide brief context for the study before describing the scientific approach and key results in qualitative terms. It should end with a sentence that describes the implications for the field. We strongly encourage authors to use the following style of structured abstracts, with the following headings:

Background: Place the question addressed in a broad context.

Objective of the study: highlight the purpose of the stud;

Methods: briefly describe the main methods or treatments applied;

Results: summarise the article's main findings;

Conclusions: indicate the main conclusions or interpretations. The abstract must not include references, figures or tables.

Keywords: Prevalence, Enteric parasitic infections, Mothers, Infants, Breastfeeding.

Highlight/ Key Message

Kindly provide 3-5 short bullet points designated to improve the discoverability, accessibility and impact of this article. Please see the Manuscript preparation page for a sample guide

INTRODUCTION

The introduction should be succinct, with no subheadings. Limited figures may be included only if they are truly introductory and contain no new results. The introduction should briefly place the study in a broad context and highlight why it is important. It should define the purpose of the work and its significance. The current state of the research field should be carefully reviewed, and key publications should be cited. Please highlight controversial and diverging hypotheses when necessary. Finally, briefly mention the main aim of the work and highlight the principal conclusions. As far as possible, please keep the introduction comprehensible to scientists outside your particular field of research. This journal adopts the **APA referencing style, 7th edition.** In-text citation is by the author's surname and the year of publication. Please download current articles by World Nutrition for a sample or visit this journal website for the author's guidelines.

MATERIALS AND METHODS

The materials and methods section should contain sufficient detail so that all procedures can be repeated and that the results can be built on. It may be divided into subsections with

headings if several methods are described. Please note that the publication of your manuscript implicates that you must make all materials, data, computer code, and protocols associated with the publication available to readers. Please disclose at the submission stage any restrictions on the availability of materials or information. New methods and protocols should be described in detail while well-established methods can be briefly described and appropriately cited. Interventionary studies involving animals or humans, and other studies that require ethical approval, must list the authority that provided approval and the corresponding ethical approval code.

RESULTS

Subheadings

The results may optionally be divided into headed subsections. It should provide a concise and precise description of the experimental results.

Advice on Equations

Equations should be provided in a text format, rather than as an image. Microsoft Word's equation tool is acceptable. Equations should be numbered consecutively, in round brackets, on the right-hand side of the page. They should be referred to as Equation 1, etc., in the main text.

$$x = \frac{-b \pm \sqrt{b^2 - 4ac}}{2a} \quad (1)$$

Advice on Figures

All figures and tables should be cited in the main text as Figure 1, Table 1, etc.

All figures should be embedded within the manuscript at a convenient break near where they are first referenced. All figures should be cited in the paper in consecutive order. Where possible, figures should be displayed on a white background. When preparing figures, consider that they can occupy either a single column (half-page width) or two columns (full-page width), and size them accordingly. All figures must have an accompanying caption which includes a title and, preferably, a brief description (see Figure 1).

Figure 1. The star is propelled with three thrusters and features a single viewing window.

Advice on Tables

Every table must have a descriptive title and, if numerical measurements are given, the units should be included in the column heading. Vertical rules should not be used (see Table 1). Tables should be cited consecutively in the text.

Table 1. Temperature and wildlife count in the three areas covered by the study.

Location	T [° C]	Turtles	Sharks	Octopuses	Starfish
Blue Lagoon	21.2	5	3	4	543
Regent's Canal	5.2	8	0	24	312
Shark Bay	12.8	4	7	9	122

DISCUSSION

Authors should discuss the results and how they can be interpreted in light of previous studies and the working hypotheses. The findings and their implications should be discussed in the broadest context possible. Future research directions may also be highlighted.

CONCLUSIONS

The Conclusions section should clearly explain the main findings and implications of the work, highlighting its importance and relevance.

Author contribution: This section should be included as part of the Title page, in accordance with the journal policy on double blind review.

Funding Statement

Authors should state how the research and publication of their article was funded, by naming financially supporting bodies, followed by any associated grant numbers in square brackets. For example, this research did not receive any specific grant from funding agencies in the public, commercial, or not-for-profit sectors. or "This research was funded by NAME OF FUNDER, grant number XXX" and "The APC was funded by XYZ". Check carefully that the details given are accurate and use the standard spelling of funding agency names at https://search.crossref.org/funding. Any errors may affect your future funding.

Institutional Review Board

Please add the Institutional Review Board Statement and approval number for studies involving humans or animals. Kindly note that the Editorial Office might ask you for further information. Please add "The study was conducted according to the guidelines of the Declaration of Helsinki, and approved by the Institutional Review Board (or Ethics Committee) of NAME OF INSTITUTE (protocol code XXX and date of approval)." OR "Ethical review and approval were waived for this study, due to REASON (please provide a detailed justification)." OR "Not applicable" for studies not involving humans or animals. You might also choose to exclude this statement if the study did not involve humans or animals.

Conflicts of Interest

This section is compulsory. A competing interest exists when professional judgment concerning the validity of research is influenced by a secondary interest, such as financial gain. We require that our authors disclose any potential conflicts of interest in their submitted manuscripts. Authors must identify and declare any personal circumstances or interests that may be perceived as inappropriately influencing the representation or interpretation of reported research results. Any role of the funders in the design of the study; in the collection, analyses or interpretation of data; in the writing of the manuscript, or in the decision to publish the results must be declared in this section. If there is no role, please state "The funders had no role in the design of the study; in the collection, analyses, or interpretation of data; in the writing of the manuscript, or in the decision to publish the results". If there is no conflict of interest, authors should state that "The author(s) declare(s) that there is no conflict of interest regarding the publication of this paper."

Data Availability

A data availability statement is compulsory for research articles and clinical trials. In this section, please provide details regarding where data supporting reported results can be found,

including links to publicly archived datasets analysed or generated during the study. Here, authors must describe how readers can access the data underlying the study's findings, including links to online repositories and deposition codes where applicable.

Acknowledgments

An Acknowledgements section is optional and may recognise those individuals who provided help during the research and preparation of the manuscript. You can acknowledge any support given which is not covered by the author contribution or funding sections. This may include administrative and technical support or donations-in-kind (e.g., materials used for experiments).

DECLARATION OF GENERATIVE AI AND AI-ASSISTED TECHNOLOGIES IN SCIENTIFIC WRITING

If AI was used, the statement should specify which tools were used and for what purpose. Explain what the AI tools were used for (e.g. drafting, editing, research). Authors are ultimately responsible for the content, even if AI was used. If no generative AI tools were used, a simple state indicating that "nothing to disclose" is sufficient.

REFERENCES

Authors are strongly encouraged to format references in accordance with the **APA 7th edition style**. Authors are responsible for ensuring that the information in each reference is complete and accurate. **All citations must be arranged alphabetically**. Please see the journal authors' guide for details.
