- b. Final review of release candidate Google Form [in the form editor](#) or [as someone filling out the form](#)
- c. Sample Airtable [here](#).
- d. Discussion of tool to use for the evaluations.

Minutes:

An informal conversation in mid-summer provided an update on where we are on the Rubric project. It has slowed down some, but should be in a state that we can vote on it as a W3C draft by the meeting in August.

There was also a discussion about possibly taking on another topic once that is done, perhaps solutions for first-party sets which was recently dropped by the privacy CG. The general discussion was that this would come with quite a bit of intensity, both good and bad. We also discussed somehow helping Sandro's work on Trust Lamp to move forward, and the importance of trust networks for addressing misinfo/disinfo issues.

4. Adjourn
