#### Additional Info:

The top eight Google search results for fuel consumption calculators

(<https://www.fueleconomy.gov/trip/>, <https://www.calculator.net/fuel-cost-calculator.html>,

ect.) require knowledge on your car's Miles Per Gallon value (MPG). For example, Fuel

Economy's calculator (<https://www.fueleconomy.gov/feg/savemoney.jsp>) calculated the

price per mile and the fixed estimates of your weekly, monthly, and yearly gasoline

costs. It does not give you insight into the costs of your *daily* trips.
