Abstract

The abstract should be written in English using single spacing, Times New Roman 11pt, italic. It is structured as one concise paragraph of no more than 250 words, covering: a brief research background and the gap that motivates the study; the main variables, objectives, and methods (including sample, approach, and analysis technique); and the key findings that address the research question. The abstract must capture the essence of the article without restating the discussion in detail..

INTRODUCTION

This section presents the background, rationale, and urgency of the research. Each paragraph should flow coherently, with ideas connected across paragraphs. Relevant references must be included to justify the research urgency, identify the problem, explore alternative solutions, and clarify the chosen approach.

Definitions, problem statements, objectives, and the significance of the study are written narratively in paragraph form, without the need for separate subheadings. The article should be formatted in Times New Roman 12pt, single spacing, on A4 paper with margins of 3 cm on all sides. Each paragraph begins with a 1.3 cm first-line indent. The article body must be a minimum of 8 pages; excessive use of images or unsupported opinions without scholarly references should be avoided..

LITERATURE REVIEW

This section presents the referenced literature connected to the research and hypothesis development. It is strongly recommended that cited sources be published within the last 5 years, prioritized in the following order: reputable international journals, accredited national journals, national journals, international symposia, national symposia, textbooks, and daily reputable sources. In-text citations must clearly indicate the author's name and source reference; the use of Mendeley as a reference manager is highly encouraged.

RESEARCH METHODS

This section covers the research design, subject/object/sample, operational definitions and measurement variables, data collection techniques and instruments, as well as data analysis and hypothesis testing.

The method may be organized into subsections. Subheadings require no notation and are written in sentence case, Times New Roman 12pt, bold, left-aligned. Avoid quoting definitions directly from books within the methods section. Widely accepted research designs do not require a cited reference.

Subsection Heading

Description of the research method subsection goes here...

HASIL DAN PEMBAHASAN

This section outlines respondent data characteristics, data analysis results, testing instruments and hypotheses (where applicable), answers to research questions, findings, and their interpretation. Descriptive statistical values are presented alongside their respective interpretations.

Table 1. Table Title (TNR 11pt, bold, centered)

Variabel	B	Std. Error	T	Sig.
(Constant)	6,77777	6,77777	6,77777	6,77777
Variabel X	0,55555	0,55555	0,55555	0,55555
Variabel Y	077777	077777	077777	077777

Source: Data processed, 444x

The discussion should be concise and centered on interpreting the findings rather than reiterating what has already been presented in the results section. It should emphasize linking the data and its analysis to the research objectives and the broader theoretical framework.

CONCLUSION

This section delivers the research conclusions, implications, limitations, and recommendations for future studies. Implications refer to the practical suggestions derived from the research findings. Limitations encompass all aspects that researchers may consider to improve future investigations. Recommendations are directed toward subsequent research based on constraints that could not be addressed in the current study.

BIBLIOGRAPHY

The reference list includes all sources genuinely cited in the manuscript, with priority given to publications from the last 5 years. The recommended composition is: 70% reputable international journals, 20% accredited national journals, and 10% from scientific books or other credible sources. References follow APA 7th edition citation style, formatted in Times New Roman 12pt, single spacing, arranged alphabetically. The use of Mendeley is strongly recommended.
