

Hi Prospective Seed Investors,

We're launching **BlockX**, an **AI-native Layer-1 blockchain** built specifically for **autonomous AI agents and machine-to-machine payments**.

BlockX natively supports the **x402 protocol** for HTTP-native micropayments, enabling developers to build AI-Fi applications and agents that can transact autonomously — without human intervention.

You can learn more here:

👉 <https://blockxnet.com>

We're currently raising our **seed round** and would love to walk you through the vision, traction, and roadmap on a call.

If open, you can book time here:

👉 <https://calendly.com/nick54321>

Best,

Nick M

Founder, BlockX
