HEADING 1

The proceeding paper should be between 2000-3500 words and can be written in English, Indonesian or Arabic language following either IMRAD or non-IMRAD structure. As for IMRAD based, this part serves as the introduction. The introduction should provide a brief background of the research resulting from an analysis of related previous studies. The gap should be identified and responded to by presenting the research backed up with the basic reasons of how and why the research problem came-up. The introduction should also present the importance of the study and how it will be able to contribute to the specific field. The section headings are in bold and 12 pt.

HEADING 2

For IMRAD-based papers, this section provides all the relevant readings from previous works. It provides brief summaries or descriptions of the works of other authors. The research materials should be from credible sources such as academic books and peer-reviewed journals. Also, the reading materials should be directly relevant to the topic of the research paper.

HEADING 3

This part explains the method in paper following the IMRAD structure. Methods must be presented in the past tense. It should provide sufficient details to allow the work to be replicated. Methods may cover design of the study, sources of data (sample/participants), kinds and amount of data, instruments, data collection techniques and data analysis. Methods already published should be indicated by a reference. Only relevant modifications should be described here.

HEADING 4

This is where the results of the analysis were made in an IMRAD-based paper. The result should be based on the chosen research method presented and discussed. The discussion also covers the implications of the research on other fields as well as the possible improvements that can be made in order to further develop the concerns of the research.

Captions for tables and figures should be numbered (e.g., “Table 1” or “Figure 2”), please note that the word for Table and Figure are spelled out. Figure’s captions should be centered beneath the image or picture and Table captions should be centered above the table body.

CONCLUSION(S)

The conclusion should not merely summarize the main topics covered or re-state the research problem, but it should be a synthesis of key points and, if applicable, a recommendation of new areas for future research.

Acknowledgments (Optional)

Collate acknowledgments in a separate section at the end of the article before the references. List here those individuals who provided help during the research (e.g., providing language help, funding, writing assistance or proof reading the article, etc.).

REFERENCES

This section is to list down all the academic materials that have been used as sources of information in the research paper. Typical reference formats/styles are APA 7th edition generated by reference manager, preferably Mendeley.
