

HealthCert - Professional Certificate of Skin Cancer Medicine

COURSE CONTENTS

The course provides training in skin cancer medicine and teaches various techniques allowing GPs to treat more complex cases in the primary care setting. Course participants can choose to complete the course entirely online or with an optional practical workshop.

- Histology
- Diagnosis with dermoscopy
- Benign and malignant skin lesions
- Melanoma management
- Punch and shave biopsies*
- Elliptical excisions and suturing*
- Dermatopathology
- Topical treatment options
- Medicare billing and Clinic workflow

All topics are covered online and during the **web live tutorials**. *These topics are also covered during the hands-on practical sessions in the optional skills workshop. Course graduates also receive ongoing post-course support through regular **alumni webinars**.
