

## EVIDENCE OF USING CLASSLINK ANALYTICS TO INFORM DECISION MAKING

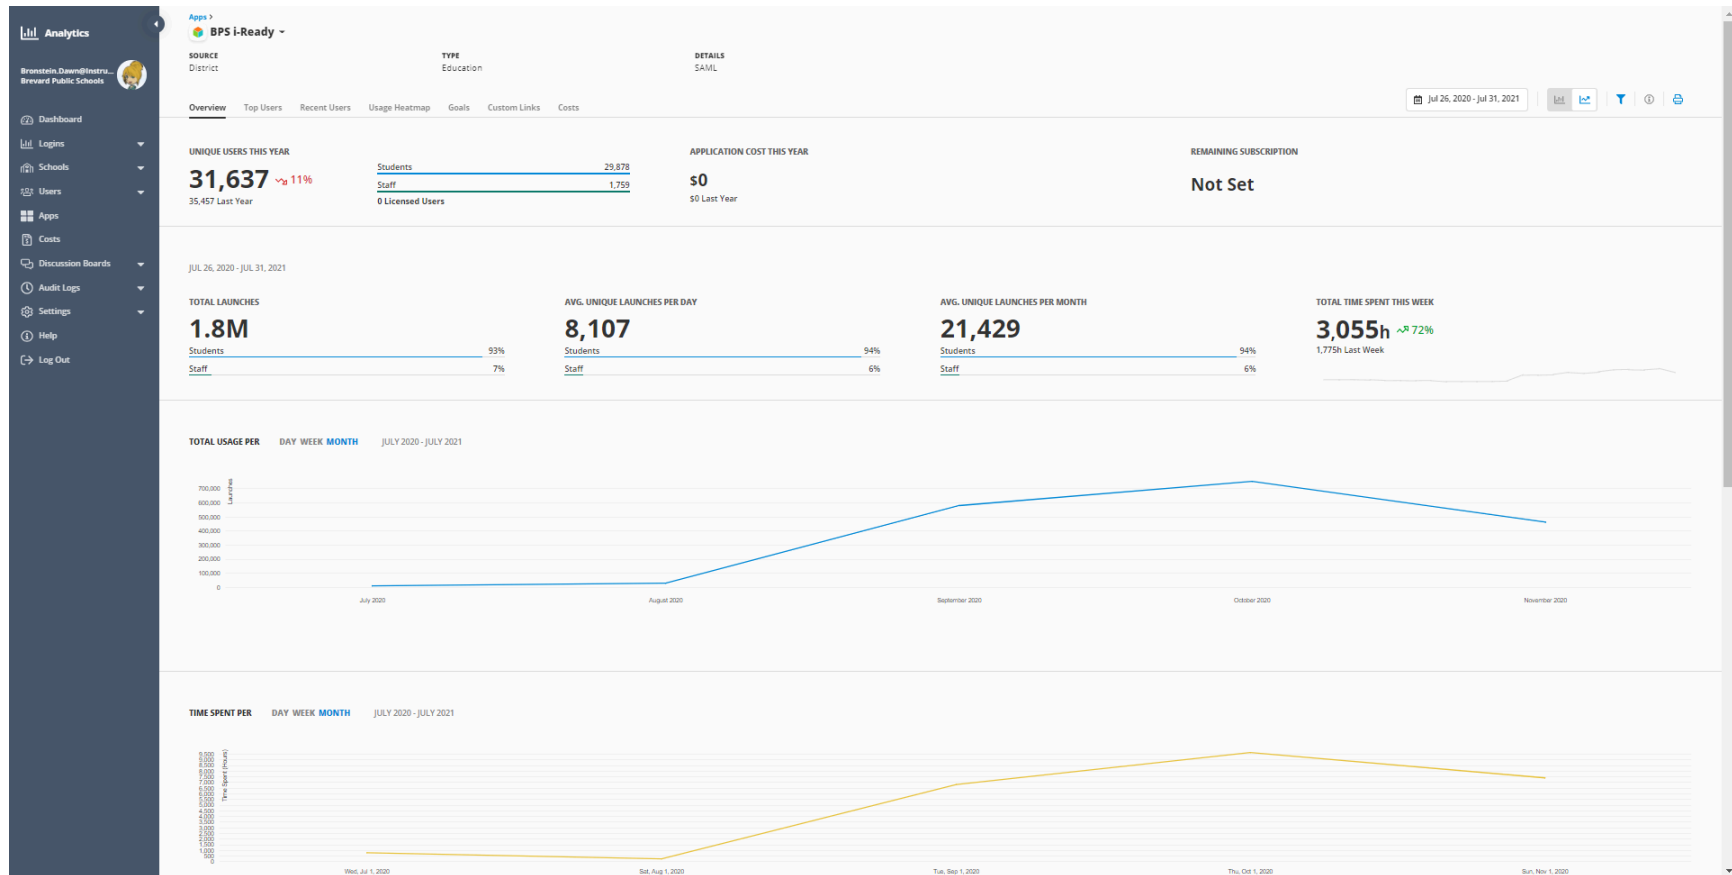

The Department of Educational Technology utilizes its Classlink analytics management console to identify training opportunities and support decision making about return on investment of online resources.

As the main access point for all resources, Classlink collects data about yearly usage of the system and allows us to filter down and analyze the usage of each rostered resource by school, user type, and individual user.

### Full Dashboard with individual resources listed in order of usage

View of overall i-Ready usage by district this school year through 11/20/20

School level usage that can be further filtered by user type and individual user. Teachers also have access to this data about their own students.
