### Abstract

The Abstract is written in a maximum of 200-250 words in English and Indonesian and must be clear, effective and comprehensive, describe briefly of the problem under study. Abstract includes the background research, objectives, methods and sample and results (11pt, Times New Roman regular).

Keywords : (11pt, Times New Roman regular, three to five words and A comma separates each word).

#### I. Preliminary (12pt, Times New Roman Bold, after 2pt)

Preliminary explains the background of the problems being resolved, issues related to the problems being resolved, and reviews of research done previously by other researchers relevant to the research being carried out. It is best to avoid organizing the writing into "sub-headings" in this introductory section. (12pt, Times New Roman, regular, spacing 1, spacing before 0 pt, after 0 pt.)

#### II. Research Method (12pt, Times New Roman Bold, after 2pt)

The research methods explains how the problem to be studied, design, objectives, sample data, data collections, measure and analisis techniques. The research method must be clearly each of stages.

#### III. Results and Discussions

The results of the research are written in the form of paragraphs regarding the results of the research to the discussion. Written systematically, critical and innovative as well as constructive analysis. The use of tables, figures, etc. is only used as a support that clarifies the discussion and is limited to truly substantial supporters, for example tables of statistical test results, images of model test results, etc. The discussion of the results is argumentative in nature regarding the relevance between the results, theory, previous research and the empirical facts found, as well as showing the novelty of the findings. Each table is written without a vertical line and is equipped with the source of the research data processing year. Tables, figures and graphs are placed at the top or bottom with the title placed above for tables and left aligned for images and graphs below. Avoid explaining tables and figures using the words "Table above, figure below, following table, etc." but clearly state tables using names such as Table 1, Figure 1, etc. Writing the words Table 1, Figure 1 must be in bold. Tables are numbered in the order of presentation (Table 1, etc.), without a right or left border. The table title is written at the top of the table with a center justified position. Write down the complete data source and year from the table presented. Table writing is explained as in the sample template:

Ex. (Table 1. Test Result of Augmented Reality)

| Table 1. Distance Test Results |       |                             |
|--------------------------------|-------|-----------------------------|
| No                             | range | Status                      |
| 1                              | 10 cm | Content AR appear           |
| 2                              | 15 cm | Content AR appear           |
| 3                              | 20 cm | Content AR appear           |
| 4                              | 25 cm | Content AR appear           |
| 5                              | 30 cm | Content AR appear           |
| 6                              | 35 cm | Content AR sometimes appear |
| 7                              | 40 cm | Content AR sometimes appear |
| 8                              | 45 cm | Content AR appear           |

Sources: Data Analysis (2019)

The serial number of the image is written under the image described. Figures are numbered in the order in which they are presented (Fig. 1, etc.). The title of the image is placed above the image with a center position (center justified). Write down the complete source and year of data from the image presented. The arrangement of images is explained as the following example:

Images. 4. Sample of Augmented Reality

Sources : Documentation 2019

#### IV. Conclusion

Writing conclusions and suggestions is written in the form of flowing paragraphs. The conclusion describes the final conclusion which is written briefly and clearly, showing the clarity of the contribution of the findings, the creation of new theories and the possibility of developing research that can be carried out in the future. In addition, the conclusions contain research implications both theoretically and practically. Conclusions should be answers to research questions, and not expressed in statistical sentences.
