

Universal information management for various goals and purposes

-

In this mode, we always use the following pair of numerical strings dr. Grabovoja:

19751 changing negative information to positive

71931 protection from any negativity.

Both sets have several synonyms in various sources, which indicates the multifaceted and universal nature of their operation. In the literature, the level of detailed definition of the task is left to the optimal individual choice for greater efficiency of information management.

Let's place both sets in a larger control sphere and add another number set that calls to us or attracts us. The following is a definition of the target sphere, which will be different depending on the goal or purpose of working with information. Let's imagine the target sphere a little smaller, maybe darker. Let's look at 3 typical different cases.

1. We want to reach a goal or realize a wish.

We define the task of management, which is the realization of a desire ... or the achievement of a goal ... in an optimal way

We say that the goal sphere encompasses all obstacles to achieving the goal (the first part of negative information) and all negative circumstances on the way to the goal (the second part of negative information).

We place the target sphere in the management or control sphere and give the intention of transforming negative information and protection against negative circumstances in accordance with the Norm. The target sphere turns purple and then silver-white.

Management can be supported by gesticulation based on our own inspiration. Holding the sphere slightly improves and increases concentration. The screen with silver and white numbers can also help us visualize. Let's use short, clear sentences out loud or silently with words that are close to us and express the essence of working with numbers.

We perform the harmonization of management results by repeating the set 741, 741, 741. This is followed by the translation of the harmonious management results to the material level with the set 889.8. Let's thank the creator and Grabovoi.

2. We want to heal ourselves or others.

We define the task of management as the elimination of a health problem... in an optimal way

We say that the target sphere includes all the causes that cause a medical problem (a brief description of the problem to be solved - e.g. neurological disorder in walking and stability - the first part of negative information) and all possible unwanted consequences of medical therapies (the second part of negative information) .

The continuation is similar to point 1.

3. We want to participate in the collective solution of a global problem

We define the task of management, which is the elimination of a global disaster according to the selected linked information (hypertext) and the protection and prevention of the further spread of the danger.

Here in the control sphere we must add the numerical string of the immediate stop of the negative action

4748132148 instant negativity stop.

We say that the target sphere covers all the causes of a catastrophic global phenomenon (a brief description of the phenomenon that should be neutralized, stopped and disabled) and all possible ways of spreading the negative phenomenon, against which protection should work (the second part of negative information).

The continuation is similar to points 1 and 2.

-

For the proposed methods of information management, we note that they also include hidden and unknown circumstances or negative information. The chosen number sets therefore seem very suitable for the creative expression of solving tasks and achieving goals, taking into account the omnipresent and boundless intelligence of Nature.

More about the universality of both sets and their supposed multifaceted potential is said in the post to which this text from GD storage belongs.
