

How to Setup BoldBrush Email in Yahoo Email Client

For now, this process must be completed on a mobile device through Yahoo's app, which is offered on Apple and Android. Until they update that, here is how it can be done on their mobile application:

1. Open Yahoo app and login
2. Click yahoo icon at top left corner
3. Click 'Add another mailbox'
4. Click 'Others'
5. Enter your boldbrush email address
6. Make sure 'IMAP' is selected
7. Below 'IMAP address' enter:

secure.emailsrvr.com

****note****

The entire address will read: [imaps://secure.emailsrvr.com](https://secure.emailsrvr.com)
'imaps:/' is already filled in

8. Enter the same thing in the SMTP address field:

secure.emailsrvr.com

****note****

The entire address will read: [imaps://secure.emailsrvr.com](https://secure.emailsrvr.com)
'smtps:/' is already filled in

Leave the numbers below those fields alone. They should read:

993 for IMAP

465 for SMTP

9. Enter your boldbrush email password

And that's it! Your mailbox will now sync up.
