0. **Manuscript Structure**

The manuscript structure refers to the standard structure of the body as follow:

Abstract. It is the first part in scientific article. It comprises summary of the whole content of scientific article. It brings a general overview about the content of scientific article to the reader. By reading abstract, readers can decide whether the research topic is relevant with their wish or not.

1. **Introduction.** It begins with general discussion. The first sentence of opening paragraph should make readers appeal and curious. Then, background of research and related previous of study are explained after opening paragraph and before end paragraph. This section logically links the existed research problems with the approach that is operated to solve the problem. Introduction ends with the aim and purpose of research or the activity and main research finding.
2. **Method.** It discusses about how the research be done. This section supports and establishes the explanation which is contained in the finding chapter.
3. **Result and Discussion.** It starts with the description of research finding. Then, data analysis of research finding becomes the next explanation. The data analysis is based on the research problem that has been presented in introduction. The descriptions in

this section can explain whether the hypothesis which is presented in the introduction can be proven or not.

4. Conclusion. It is the last section in the AIM (RAD) C model. It summarizes some information of the research finding and discussion.

Please ensure that all the figures are of 300 DPI resolutions as this will facilitate good output. The figure number and caption should be typed below the illustration in 8 pt and left justified [Note: one-line captions of length less than column width (or full typesetting width or oblong) centred]. For more guidelines and information to help you submit high quality artwork please visit: <http://www.elsevier.com/artworkinstructions> Artwork has no text along the side of it in the main body of the text. However, if two images fit next to each other, these may be placed next to each other **to** save space. For example, see Fig. 1.
