

WELCOME!

## Program AI-3 : Concept 7 Activity

<b>Chatbot Name</b>	
LibBot - the Library Chatbot!	
<b>Description</b>	
LibBot is an AI-powered recommendation chatbot, designed to make book recommendations based on past book preferences and a brief conversation. You can also use it to find books, check availability, renew borrowed items, and answer general questions about library services.	
<b>Intended Uses</b>	
You should use LibBot when you're looking for that next book to read, but aren't sure what to look for. Or if you want to read something completely different! After a brief conversation, LibBot can provide recommendations based on your preferences and even help you check availability and check it out from the library!	
<b>Limitations and Warnings</b>	
Don't put personal information into the chatbot - always wait until you are on the official library website. The chatbot also isn't always accurate with obscure books or recommendations, or really recent book releases.	
<b>Testing &amp; Evaluation</b>	
The chatbot has been tested by a trusted group of librarians to make sure it gives accurate recommendations, and made sure the chatbot stayed on-task.	
<b>Example Prompts &amp; Topics</b>	
I just read Harry Potter - what should I read next?	I've never read a mystery novel - what should I start with?
What's a young adult novel with a strong female lead for my niece?	I want to learn how to weld - are there any books on that?
