

Theodore Twilleager

“Around Battery Park, some of the flood-prevention construction has slowly begun. Other areas struggle with more pushback from residents, as many feel that flood prevention is unnecessary if the site didn't flood during Sandy. The South Street Seaport Museum flooded with 6.5 feet of water but survived in terms of keeping people and artifacts safe. Uptown New York got power back much sooner than downtown. Seaport took months to regain power. For the 10th anniversary of Sandy, Seaport kept up a line to mark where the water level peaked. In terms of construction progress, the floodgate construction slowly trudges along due to the intricate shaping of the harbor. “
