

The Electric Grid of the *Future* —

Transactive Energy

...is already here!

- ❓ Our **aging electric grid** was not built for solar panels, batteries, and cars that act like a battery and give energy back to your house!!
- ❓ We'll need “**smart grids**” that can use “**transactive energy**” to:
 - ◆ Coordinate energy sources,
 - ◆ Improve grid operations,
 - ◆ Reduce peak grid load,
 - ◆ And minimize the need for more poles or wires.

Transactive Energy will cut costs, saving NH consumers millions of dollars each year.

The NH Electric Cooperative is now piloting Transactive Energy.

Plan on joining the **NH Network**
January 13, 2023 • 5:30-7:00 pm on Zoom
to learn about the potential of this exciting new technology!

Speaker: Brian Callnan, VP Power Resources & Access, NH Electric Coop

Moderator: Joe Kwasnik, former Board Chair, NH Electric Coop

REGISTER HERE for January 13: [TRANSACTIVE ENERGY Registration](https://bit.ly/NHN-transactive-energy)

or type in: bit.ly/NHN-transactive-energy
