

CITOL is excited to share news about a Canvas LMS Chrome extension that UMES IT has enabled for everyone to use.

To use this Chrome extension:

1. Click on this [Canvas LMS Mods \(Basic\) link](#).
2. Click “Add to Chrome” in the upper right-hand corner.

**Canvas LMS Mods (Basic)** enables student assignment submissions to be BULK downloaded with Rubrics and feedback rather than downloading assignment submissions individually for each student when needed for accreditation purposes.

Instructors can download assignment submission data with rubric criteria scores/comments. The export buttons will appear on the assignment when a ratio of graded submissions is shown on the right-hand side. The download will be a CSV file, and instructors can open it in Microsoft Excel or other spreadsheet applications to analyze the data. There is an option to download the data with one row per submission or one row per criteria.

Once the Chrome Extension is added to your Google Chrome Browser:

[To download all assignment submissions:](#)

- 1) Open the assignment
- 2) Click on “Download Submissions”

The Zip file containing ALL student submissions will automatically download.

[To download the grades with criteria and comments:](#)

- 1) Open the assignment
- 2) Click on “Export Grades by Criteria”

The report automatically downloads all student grades based on criteria from the rubric associated with the assignment.

We know this will help everyone with their accreditation efforts moving forward.
