**Guidelines on How to Identify
Anomalous Phenomena**

BY ORDER OF SITE-65'S RESEARCH DEPARTMENT
THIS DOCUMENT IS FOR THE EYES OF APPROPRIATE PERSONNEL ONLY

-Preface-

The following information will detail on how to grade and test anomalies on different kinds of equipment and the field of parascience. The purpose of these tests is to have a better understanding of what kind of phenomena you're dealing with.

Test: Humes

Description: A Hume is a way to determine the strength and/or amount of reality in a given area.

How are Humes measured: Via the Kant counter! A Kant counter consists of two modes, LOW and HIGH. The Baseline is around 100. In the LOW setting, the lower the humes get, the higher the standard reality manipulation the phenomena is enacting. The Opposite is true for the HIGH setting, the higher the humes get, the higher the standard reality manipulation the phenomena is enacting.

Measurements:

Hume Test Result	Baseline	Moderate	Extreme
Explanation	The phenomena is not standard reality manipulation. (around 100)	The phenomena shows signs of standard reality manipulation. (LOW: ~80, HIGH: ~120)	The phenomena exhibits standard reality manipulation. (LOW: 0, HIGH: 200+)

Sammy Skipper Says...

"Make sure that the object you're testing is isolated from other anomalous phenomena before testing!"

Test: EVE

Description: EVE, [Elan-Vital Energy], also known as Vital Energy. The main power source for thaumaturgy.

How is EVE measured: Via the VER Detector (Vital Energetic Radiation). The Detector will output color over the subject in the imagery depending on the amount of EVE particles they are radiating. For example: No color for non-thautologists, Teal for traumatologists, Blue for Type-BLUE, Green for Type-GREEN. Contact your Executive to acquire a Foundation issued VER Detector (It looks like a camera).

Measurements:

EVE Test Result	Baseline	Moderate	Extreme
Explanation	The phenomena is not standard thaumaturgical activity (No Colors).	The phenomena shows signs of standard thaumaturgical activity. (Teal/Blue)	The phenomena exhibits standard thaumaturgical activity. (Green/Any other colors)

Test: Cuil

Description: its a unit of measurement denoting one level of abstraction away from the reality of a situation.

How is Cuil measured: The phenomena goes from being specific to nebulous, from literal to metaphorical, etc. The further out, the more concepts can be related to other concepts. But it's still, ultimately, limited by the original set of concepts. In short, the more meta a phenomenon is, the more Cuils it has. 0 Cuils being normal, anything beyond that isn't. To Know if a phenomena is abstracted, try relating it by existing tangible things.

Measurements:

Cuil Test Result	Unabstracted	Abstracted
Explanation	The phenomena is not standard reality abstraction.	The phenomena exhibits standard reality abstraction.

Test: Ectoentropic

Description: An ectoentropic object can violate the laws of thermodynamics and generate energy/matter out of nothing. (Like, as an example, an infinite battery is ectoentropic.)

How is it measured: If the phenomena can generate energy or matter out of nothing (violating the laws of thermodynamics). Then it is interdimensional. Interdimensional means it doesn't obey the laws of thermodynamics. Otherwise it's localized (within our universe, where thermodynamics exist).

Measurements:

Ectoentropic Test Result	Localized	Interdimensional
Explanation	The phenomena is not standard interdimensionality.	The phenomena exhibits standard interdimensionality.

Test: Akiva

Description: A form of non-electromagnetic radiation that is directly correlated with the amount of religious faith a person holds.

How is it measured: Via the Akiva Counter. Akiva readings of individuals correspond to rankings on the Brandon-Spencer Piety Scale. with higher Akiva readings correlating with a greater willingness to make decisions based on faith in the supernatural. Contact your Executive to receive the N-THEO Gen IV Akiva Counter. Baseline Akiva is from 0 to 25. Moderate Akiva is 25-134. Extreme Akiva is from 134 to 200. Anything beyond 200 is considered to be a Deity.

Measurements:

Akiva Test Result	Baseline/Ambient Akiva	Moderate Akiva	Extreme Akiva
Explanation	The phenomena is not of divine punishment/blessing. Non-human animal with no perceived religious significance. Non-religious individuals.	The phenomena shows signs of divine punishment/blessing. Regularly practicing believer. Notably pious believer, religious leader	The phenomena exhibits divine punishment/blessing. Prophet, Saint, Messiah, Demigod, Deity.

Test: Essophysical

Description: The parascience studying embodiments of certain concepts. An Essophysical embodiment is the idea that concepts, platonic forms from the world of ideas, can and have manifested physically. Example: The Grim Reaper is the Essophysical embodiment of death.

How is it measured: As it stands right now, the only way you can measure an object (if it is essophysical or not) is by relating it to abstract concepts. For example, a phenomena has made people around its vicinity eat anything even if its non-edible, Essophysicist have deduced its the embodiment of famine.

Measurements:

Essophysical Test Result	Unbound	Bound
Explanation	The phenomena is not of essophysical embodiment.	The phenomena exhibits an essophysical embodiment.

Test: I-ACRS

Description: Stands for "Inter-Anomaly Correlative Regression Score". A scale for how closely an anomalous effect is related to existing datapoints on other anomalies..

How is it measured: You examine the phenomena and see if it has correlation or has it been caused by any other existing anomalies in the database (SCIPNET). For example, SCP-427-2 would result in a "Match" since it has been the product of SCP-914. The process will use Data mining techniques, Consult your Executive for further instructions on how to do so.

Measurements:

Essophysical Test Result	Unmatch	Match
Explanation	The phenomena is not caused by a known anomaly.	The phenomena exhibits causation by known anomaly.

-Anomaly Coherence Grade-

Anomaly Coherence Grade (ACG), a classification used by SCP Foundation Containment Specialists for determining an anomaly's internal logic. Grades consist of the following:

- **Pseudo-Explained:** Anomaly is fully explainable through parascience.
- **Internally Consistent:** Anomaly is not scientific, but follows well-established rules.
- **Pattern-Based:** Anomaly follows some set theme or pattern, although has no set rules.
- **Inexplicable:** The anomaly follows no consistent rules or patterns, making containment exceedingly difficult.
