ABSTRACT

The Abstract should be no more than 250 words, with 3-5 key words. It should not be descriptive, but should contain only important facts raised from the manuscript. The abstract should be written into a single paragraph that briefly summarises each main section of introduction, methods, results and conclusion of your paper.

1. Introduction

Introduction represents a short description of the problem described in the manuscript and purpose of the study. There is a need to mention only the references in the direct relationship with a problem presented in manuscript. Continue logically and finish the section with a short description of the aim of the study.

2. Methods

Methods should present concisely and systematically a list of summarize data sources, including years searched. Include in the search the most current information possible, ideally conducting the search several months before the date of manuscript submission. Potential sources include computerized databases and published indexes,

registries, abstract booklets, conference proceedings, references identified from bibliographies of pertinent articles and books, experts or research institutions active in the field, and companies or manufacturers of tests or agents being reviewed. Describe inclusion and exclusion criteria used to select studies for detailed review from among studies identified as relevant to the topic. Under details of selection include particular populations, interventions, outcomes, or methodological designs. Specify the method used to apply these criteria (for example, blinded review, consensus, multiple reviewers). State the proportion of initially identified studies that met selection criteria. Describe guidelines used for abstracting data and assessing data quality and validity (such as criteria for causal inference). State

the method by which the guidelines were applied (eg, independent extraction by multiple observers).

Authors should report systematic reviews and meta-analyses in accordance with the PRISMA (Preferred Reporting Items for Systematic Reviews and Meta-Analyses) statement.

3. Results and discussion

State the main results of the review, whether qualitative or quantitative, and outline the methods used to obtain these results. For meta-analyses, state the major outcomes that were pooled and include odds ratios or effect sizes and, if possible, sensitivity analyses. Accompany numerical results by confidence intervals, if applicable, and exact levels of statistical significance. For evaluations of screening and diagnostic tests, include sensitivity, specificity, likelihood ratios, receiver operating characteristic curves, and predictive values. For assessments of prognosis, summarize survival characteristics and related variables. State the major identified sources of variation between studies, including differences in treatment protocols, protocols, co-interventions, confounders, outcome measures, length of follow-up, and dropout rates.

Tables, figures and illustrations

Illustrations should be kept to a minimum. Data reported in tables or figures should not be repeated in the text. We accept up to five tables/figures.

Each table/figure/illustration should be presented on a separate page in the smaller format possible and contain: a) descriptive or explanatory title; b) respective number (using Arabic, not roman numerals) consecutively as cited in the text; c) all the necessary explanations of symbols and abbreviations.

Tables. Table title should be placed above the table.

Use the MS Word table tool (table's editor). Abbreviations may be used, but must be explained in full as footnotes. Units of measurement must be clearly indicated.

Place explanatory matter in footnotes. Explain in footnotes all abbreviations that are

used in each table. Mark the footnotes using the following symbols, in this sequence:

*,†,‡,§,||,¶,**,††,‡‡,...

Figures. The title should be placed below the figure. Hard copy of all **figures** (MS Excel/cdr/eps files) must be prepared and retained by authors in case it is needed during the publication process.

Illustrations must be delivered in high-quality electronic format, labelled with the number and author name. To protect privacy of individuals, only body part of the interest should be presented; in the case of the need to present some pathological changes on the head, only particular detail should be presented.

4. Conclusion

Conclusions should be stated in a short, clear and simple manner, stemming directly from the results shown in the paper. Rather than summarizing the data, conclude from them.

5. References

All the references mentioned in the text should be cited in the "Author-Date" format, for example (Woodward 1987), (Schuman and Scott 1987); An author-date citation in running text or at the end of a block quotation consists of the last (family) name of the author, followed by the year of publication of the work in question. In this context, author may refer not only to one or more authors or an institution but also to one or more editors, translators, or compilers.

No punctuation appears between author and date.
Abbreviations such as ed. or trans. are omitted.

- Journal Articles:
 1. Author 1, and Author 2. Year. Title of the Article. *Journal Title* 6: 100–10.
- Books and Book Chapters:
 2. Author 1, and Author 2. 2008. *Book Title*, rev. ed. Publication place: Publisher, pp. 154–96.
 3. Author 1, and Author 2. 2008. Title of the chapter. In *Book Title*, 2nd ed. Edited by Editor 1 and Editor 2. Publication place: Publisher, vol. 3, pp. 54–96.
- Unpublished work, submitted work, personal communication:
 4. Author 1, and Author 2. Title of Unpublished Work. *Journal Title*, phrase indicating stage of publication.
 5. Author 1 (University, City, State, Country), and Author 2 (Institute, City, State, Country). Year. Personal communication.
- Conference Proceedings:
 6. Author 1, Author 2, and Author 3. Year. Title of Presentation. In *Title of the Collected Work* (if available). Paper presented at Name of the Conference, Location of Conference, Date of Conference. Edited by Editor 1, Editor 2 and Editor 3 (if available). Publication place: Publisher (if available); Abstract Number (optional), Pagination (optional).
- Thesis:
 7. Author 1. Year. Title of Thesis. Level of Thesis, Degree-Granting University, City, Country. Date (if available). Identification information (if available).
- Websites:
 8. Author 1, and Author 2. Year. Title of the article. *Magazine/Journal Name*. Available

online: URL (accessed on Day Month Year).

Unlike published works, websites may change over time or disappear, so we encourage you create an archive of the cited website using a service such as [WebCite](#). Archived websites should be cited using the link provided as follows:

9. Title of Site. Available online: URL (archived on Day Month Year).
