Design sheet four column template.

Important notice

If you've started your design sheet as a 3-column version I don't think you can simply add this to the work you've already done. So if you're going to mix the two types I would save them as separate files and bring the work all together at the PDF stage.

The 4-column version is useful as it allows far more images to be added to the individual page, so might work really well or you might simply prefer the look of the 4 column version and choose to use this for the whole project?
